**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes and the necessary social and community infrastructure needed to support it without encroaching onto the golf course.

It is easier to create additional infrastructure than overloading existing over-stretched facilities.

It would simplify the process for obtaining planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals. The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

A Traveller site on the site would satisfy the requirements of policy CS14. It would also link in with other broader strategies in place in the most appropriate way. Pitches could be designed with the recommended privacy, security and space provisions, whilst the overall residential development could provide open-space and playground facilities. Traveller accommodation within the residential development would enable residents to seek or retain employment, attend school or other education and obtain access to health and shopping facilities.

**Officer Response:**

Support for the Martyrs Lane site is noted.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);

- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

**Customer Name:** A Le Blanc

**Summary of representation:**

Besides a site in Mayford all development that is being proposed is in the north of the Borough. Areas like Knaphill have not been considered.

The road network in the area is not adequate to support a large number of additional vehicles.

Would like confirmation that the number of properties proposed will be sufficient to sustain the requirement for affordable and or social housing.

**Officer Response:**

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, the Council has carried out a Sustainability Appraisal to appraise reasonable alternative sites to inform the Site Allocations DPD. This process is objective led and has provided a consistent basis for describing, analysing and comparing the sustainability effects of the various options and the specific proposals of the Site Allocations DPD. The report is available to view on the Council's website.

In total, the Council appraised about 125 alternative sites when it was preparing the draft Site Allocations DPD. It should also be noted that the draft Site Allocations DPD contains over 70 sites that are located across the borough for a range of development uses.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to all residential development allocations in the Site Allocations DPD. Based on the Council's viability assessments used to inform the Core Strategy and Community Infrastructure Levy, residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability.

**Contributor Reference:** 01140/1/001  
**Customer Name:** Ms Joy Rogerson

**Summary of representation:**

Assumes that the reason for the Martyrs Lane consultation is to build over three times the number of houses.

Some of the original sites already suffer from gridlock and development will make the situation worse. This would imply that the sites are unsuitable. 3500 dwellings at Martyrs Lane would also create traffic problems.

Objects in principle to Green Belt development, which is immaterial to this consultation.

**Officer Response:**

The purpose of the consultation is to inform the Council's decision on its preferred safeguarding approach. As clearly set out in the Land to the east of Martyrs Lane Consultation Document, the site is considered to be able to accommodate at least 1200 net additional dwellings. Therefore the representation referring to 3500 dwellings is incorrect.

The Council has previously addressed the comments relating to traffic and road infrastructure for the six safeguarded sites identified in the draft Site Allocations DPD (2015) in the Regulation 18 consultation Issues and Matters Topic Paper. This is available to view on the Council's website.

Objection to the principle of Green Belt development is noted. The Council's response to this is also set out in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01141/1/001  
**Customer Name:** Mr Adam Gibson

**Summary of representation:**

Objects to the proposal

**Officer Response:**

Objection noted

**Contributor Reference:** 01142/1/001  
**Customer Name:** Mr David Ashdown

**Summary of representation:**

Objects to the proposal for the following reasons.

Loss of Green Belt land

Disruption caused during construction

Increased traffic congestion on roads unable to support additional traffic

Pressure on education and healthcare facilities already at capacity

Pressure on utilities and infrastructure including energy, drainage and waste disposal

**Officer Response:**

Objection to the proposed safeguarding of the site is noted.

The Council is fully committed to the comprehensive delivery of the Core Strategy which seeks to facilitate the delivery of at least 4964 net additional dwellings over the plan period. The Core Strategy also commits the Council to prepare the Site Allocations DPD to release Green Belt land for development, and in doing so make sure that it will not undermine its overall purpose and integrity. The reasons for Green Belt release to meet development needs is set out in further detail in the Regulation 18 consultation Issues and Matters Topic Paper as well as the Core Strategy.

It is correct that there will be some disruption during the construction period of any of the allocated sites, particularly where a number of the sites are in close proximity to each other. Nevertheless this will be taken into account at the planning application stage in order to minimise the disruption including noise, dust, traffic and air pollution. This may be controlled by planning condition to reduce or mitigate any adverse impacts of construction.

The representation regarding congestion on the local road network and the provision of additional infrastructure have been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

As part of the preparation of the Core Strategy and Site Allocations DPD, the Council has consulted with a wide range of infrastructure and utility providers to ensure that the adequate provision of infrastructure is delivered to support development. The Council will consider all of the representations received from these infrastructure providers and take them into account when finalising the Site Allocations DPD for Regulation 19 consultation. The Council is also in the process of updating its Infrastructure Delivery Plan and has a Community Infrastructure Levy Charging Schedule in place to secure infrastructure contributions from developments.

**Contributor Reference:** 01143/1/001  
**Customer Name:** Mr Richard Deacon

**Summary of representation:**

Support for the proposed safeguarding of the site.

The site is capable of accommodating associated infrastructure with new housing, either through new or enhancing existing. Understands that the A320 has emerged top of a list of transport improvements identified by the Local Enterprise Partnership for the 'M3 Corridor' (rated on a benefit–cost ratio).

**Officer Response:**

Support for the site is noted.

Regarding the representation on infrastructure provision, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has prepared a number of transport studies to support the Site Allocations DPD. These include the Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015) and the Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016). These studies highlight that the A320 is a traffic hotspot and development at Martyrs Lane or the six other sites will exacerbate congestion on this road as well as the A245 and B382. The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts and has also brought this to the attention of the LEP. Improvements to the A320 are also set out in the Council's CIL 123 List. This work is on–going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 01157/1/001  
**Customer Name:** Ms Angela Cassidy

**Summary of representation:**

The site is previously developed land so does not perform any critical Green Belt purposes.

The site is more suitable for delivering affordable housing and is close to major employers.

Only the northern section of the site is needed to deliver the housing requirements. The New Zealand Golf Course should remain.

The site is more directly connected to rail and road networks. It would alleviate the congestion likely in West Byfleet from traffic emanating from the six alternative sites across the borough. It is adjacent to the A320 so traffic will travel away from the borough towards the M25 or A3. The A245 through West Byfleet is at capacity, especially when the development of Broadoaks and West Hall is considered.

Buses can be more easily provided to one site than several dispersed sites.

The Pyrford sites are used for recreational purposes and therefore has more amenity value.

The Pyrford sites are important heritage features of the wider landscape character as set out in The Surrey Landscape Character Assessment. Martyrs Lane has no known heritage value and limited public footpaths. It is not an integral feature of local designated heritage sites referred to in the Hankinson Duckett report.

Martyrs Lane has no local or national landscape designations where as Mayford and Pyrford are protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding.

Nevertheless neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust

policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The matters relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

**Contributor Reference:** 01191/1/001  
**Customer Name:** Mr David Thompson

**Summary of representation:**

Agree to the proposed allocation of safeguarding land to the east of Martyrs Lane for future development needs.

Although Green Belt, some of Martyrs Lane is previously developed land which is not true of the other proposed sites. It is not necessary to develop on the New Zealand Golf Course. The northern part of the site can deliver 1024 homes as required by the Local Plan.

The Green Belt in Pyrford is used for recreational purposes.

The Green Belt in Pyrford is an integral part of the heritage setting of the area. The sites are surrounded by heritage assets and features.

The Pyrford landscape is protected by Woking Core Strategy policy CS24 as an 'escarpment and rising ground of landscape importance'.

The Green Belt in Pyrford has been farmed and is good quality agricultural land. They are an important contribution to the rural character of the area and setting for the southern gateway into the town.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would

only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding.

Nevertheless neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

**Contributor Reference:** 01210/2/001  
**Customer Name:** Mr Matthew Brown

**Summary of representation:**

The representation understands that the fields on either side of Upshot Lane, Pyrford are once again under threat from potential development as Woking Borough Council considers alternatives to the proposed development at Martyrs Lane.

The representation would like to stress the unique value of these fields as one of the very few remaining examples of virgin agricultural land still existing within the borough of Woking, providing both vital biodiversity and much appreciated green space in what is, unfortunately, becoming an increasingly urbanised region. Once lost, these natural assets will never be replaced, and will inevitably be the poorer for it.

The semi-rural setting of Pyrford was an important consideration to live in Pyrford.

Furthermore, in practical terms, our roads, many of which are very narrow and high traffic, could not cope with the addition of several hundred daily car journeys which development of this site would likely entail.

**Officer Response:**

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding.

The representations regarding landscape character, biodiversity and traffic and congestion in Pyrford have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. These sites are not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production it should be noted that this particular site is of low soil quality.

**Summary of representation:**

Understands that the South East needs more accommodation, but this area is oversubscribed with people. Woodham Lane is a busy road at the best of times, and when there are issues with the A320 it becomes the alternate route; the bumps near the Broadway are not built to cope with HGVs constantly.

The current works on Victoria Way are showing how the area is unable to cope with roadworks; if more houses are added to the area the issue will only become worse.

Both the A320 and Martyrs Lane have had some serious accidents – these would only increase and make the junctions with McLaren and Woodham Lane even more dangerous.

We are also very lucky in our area to have some unusual species such as the Dartford Warbler at Chobham Common; and there are probably similar unusual species in this area that shouldn't be pushed towards extinction due to extra houses.

People are unlikely to want to live next to a tip due to the smell.

**Officer Response:**

Objections are noted.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites, and that highway safety is maintained. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The Council recognise that the land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

The Council accepts that it has not carried out a detailed ecological assessment of the site, and recognises the importance for doing so. However, the appropriate time to undertake such a

study would be at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The social and environmental implications of the recycling centre will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

**Contributor Reference:** 01056/1/001

**Customer Name:** Glenn Sawyer

### **Summary of representation:**

From a purely commercial point of view a single site is more economical.

The Green Belt should be protected no matter what. Appreciate that previously developed land is in short supply, but Green Belt land should not be utilised, due to the important purpose of the Green Belt.

Since the Green Belt was established, several areas have merged and urban sprawl has taken place in areas in and around Woking e.g. Westfield and Old Woking, Knaphill and Horsell. There are very few outlying villages that have not yet been absorbed into the whole, and the Core Strategy only identifies the villages of Mayford and Brookwood as remaining. However, were the Martyrs Lane site to be utilised it would not merge villages since it would only border both Sheerwater and to a lesser extent Woodham. These villages are already joined and separated only by postcode. Whereas were GB10 and GB11 (Sanders Lane, Mayford) to be developed it would effectively infill and merge Mayford with Hook Heath, GB4 create an infilling of Byfleet, GB5 an expansion of Byfleet, GB12 create an infilling of Pyrford and GB13 an expansion to Pyrford.

Amenity is a key consideration, and Martyrs Lane site has the potential to deliver this over and above the substituted sites as follows:

- i) Martyrs Lane benefits from existing direct access onto the A320 and A245 road transport links and with easy access to the M25, whereas the 6 other identified sites in and around the south of Woking will directly access either onto country lanes, in-town roads or filter onto B roads. The only exception being GB4 could access the A245. All of these road networks are already exceptionally busy.
- ii) A single site will mean less overstretching of existing key infrastructure services such as electricity, gas, water and telecoms as a scheme of this size is likely to necessitate national grid changes, and given that additional essential services such as health facilities, community centres etc could be built-in to the scheme (provided perhaps by the developers) then overall development costs are reduced.
- iii) Provision of affordable homes, social and Traveller accommodation – a larger, single site provides greater opportunity and flexibility. A development of this scale could include 1–2 bedroom dwellings and not just 3–4 bedroom dwellings.
- iv) Given that the Martyrs Lane site scheme would need to respect the Borne river flood plain it is unlikely to have any other detrimental effect on the surrounding water table, whereas relating to GB10 and GB11 any development on the Hook Heath escarpment will have significant effect on the area below and ultimately would affect the flood zone in and around the Hoe stream and surrounding heathland and SSSI, even given the implementation of an effective surface water attenuation scheme.
- v) Fewer existing residents of the Borough would be directly affected if a single site was included in the Site Allocations DPD over and above the six individual sites detailed.

## Officer Response:

The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

A key objective of the Council – and of the Core Strategy – is to protect the integrity of the Green Belt and to harness its recreational benefits for the community. As acknowledged in the representation, the Council will direct most new development to previously developed land in the town, district and local centres. However, in order to meet future housing need in the Borough, the Council has identified areas of Green Belt which are of lower quality, or serve less purpose, to meet housing need beyond 2022. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. This issue is addressed in detail in the Regulation 18 Issues and Matters Topic Paper (see Section 1 and 2).

The Council has commissioned two studies to assess various parcels of land against the purposes of the Green Belt as defined in the NPPF:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt. The Peter Brett report does, however, recommend the original sites to be allocated for development: further detail can be found in the conclusions of the report, and in the

Regulation 18 Issues and Matters Topic Paper (see specifically Section 12 on the separation between Woking and Mayford; Section 15 on urban sprawl; and Section 21 on removing Green Belt land and affect on amenity of residents).

With regard to transport: the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed

transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

With regard to infrastructure: to ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

With regard to housing mix and Traveller accommodation: the Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other. The Council will also ensure that a satisfactory housing mix is delivered – as required by Core Strategy planning policy (currently CS11) – irrespective of whether development is on a single or multiple sites.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers as set out in the Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

With regard to flood risk: the Council attaches significant importance to flood risk because of its potential threat to the livelihood of residents and local businesses. The Site Allocations DPD is informed by an up-to-date Strategic Flood Risk Assessment (2015) which determined the suitability of sites according to their exposure to flood risk. Section 5 of the Regulation 18 Issues and Matters Topic Paper provides more detail, and concludes that the development of the original six sites would not lead to or be exposed to an unacceptable level of flood risk.

Whilst there may be economies of scale related to the development of a single site, a key objective of the Site Allocations DPD is to allocate the most sustainable sites given all reasonable alternatives, whilst making sure that the overall purpose and integrity of the Green Belt are not undermined. There are planning policy mechanisms in place to ensure that development is supported by the necessary social, physical and green infrastructure irrespective of whether a single site or multiple sites are allocated for development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Contributor Reference:** 02969/1/001  
**Customer Name:** Mr Tony Howe

**Summary of representation:**

The site to the east of Martyr's Lane does not contain any currently – defined Areas of High Archaeological Potential, County Sites of Archaeological Importance or Scheduled Monuments. It does however include a number of entries on the County Historic Environment Record, and some Ancient Woodland. The site is also extremely large – well over the 0.4ha threshold specified in the Woking Local Plan (Core Strategy Policy CS20) as necessitating archaeological assessment and possibly evaluation prior to development. Even if the site is developed as a series of smaller parcels over a longer period of time, threshold is expected to be relevant for the majority of the area.

Recommends that a minimum requirement for archaeological assessment should be included in any development document or outline that might be produced for the site to inform potential developers of possible site constraints.

The sites that are proposed to be removed from the DPD also contain a number of identified archaeological constraints which require similar assessment to that set out above. Has no concerns about these being removed from the DPD should the site at Martyr's Lane be substituted, or their remaining in the DPD if it is not.

These comments are made from the archaeological point of view and should not be interpreted as either endorsement or opposition to the proposal or represent any other perspective.

**Officer Response:**

The Council is aware of the existing designated Ancient Woodland towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that heritage assets are protected as part of any future development. Particular reference is made to Policies CS20: Heritage and conservation, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM20: Heritage assets and their settings of the Development Management Policies DPD.

Safeguarded sites for development after 2027 will only be released for development through the review of either the Core Strategy and/or the Site Allocations DPD. At this point, the key

requirements of the site(s) – including the requirement to conduct appropriate archaeological evaluation and investigation – will be included in planning policy within the DPD. The recommendations within the representation are, however, noted and will be taken into account in future iterations of the DPDs. It is highly likely that similar planning policy to that referred to above will apply to the safeguarded sites with regards to heritage assets, and therefore it is likely that conducting archaeological assessment will be included.

**Contributor Reference:** 01059/1/001  
**Customer Name:** UK Power Networks

**Summary of representation:**

A map is attached of UK Power Networks' assets within the area at land to the east of Martyrs Lane, which would need to be protected/considered during any planning application for development at this site.

**Officer Response:**

The presence of UK Power Networks' infrastructure assets is noted, and will be considered as part of any future planning application that is submitted should the site be safeguarded for development.

**Contributor Reference:** 00197/3/001  
**Customer Name:** Ms Marianne Meinke

**Summary of representation:**

Attached is a list of traffic accidents in and around the Lion Retail Park area to demonstrate how building more homes on this already congested side of town will threaten highway safety and endanger local residents.

**Officer Response:**

The additional evidence is noted. The issues put forward in this representation have been addressed in full against the original consultation response, reference: 00197/2/001.

**Contributor Reference:** 01073/1/001  
**Customer Name:** Mr Ken Simpson

### **Summary of representation:**

Opposed to the proposal (and also to the building of homes on previously identified sites in the Green Belt).

No new housing should be built within 400m of the Thames Basin Heaths SPA. A significant percentage of the proposed development site falls within this zone. Consultation of the South East Plan revealed that potentially damaging levels of recreational pressure are already faced by many European sites. Recreational use of a site has the potential to cause disturbance to sensitive species, cause damage through erosion, and generate problems with dog fouling. Bird species are more affected by people with dogs than by people alone. Horsell Common is already used by a large number of dog walkers. Many hundreds of new homes within half a mile would add significantly to this problem. Nutrient-rich habitats such as heathland are particularly sensitive to the fertilising effect of inputs of phosphates, nitrogen and potassium from dog faeces.

Within 400m–5km of the SPA boundary, the Thames Basin Heaths Avoidance Strategy requires development to make a contribution towards the provision of SANG and SAMM to mitigate adverse impacts on the SPA. This alone rules out the Martyrs Lane site for development. The provision of SANG as a mitigation measure is nonsense: if the occupants of a thousand new homes have Horsell Common SPA on their doorstep it is inevitable that a significant number of those people will use that land for leisure purposes, many of them dog walkers. Any SANG land cannot be provided within the Borough closer than Horsell Common. The availability of SANG is recognised by WBC as a fundamental constraint, and they have confirmed that any site which cannot be apportioned to a particular SANG, or provide a bespoke SANG, will not be allocated.

A massive increase in motor vehicle use within a small area, which is what the Martyrs Lane development would inevitably bring with it, would contribute to atmospheric pollution. An increase in the deposition of nitrogen from the atmosphere to soils is generally regarded to lead to an increase in soil fertility, which can have a serious effect on the quality of nitrogen-limited terrestrial habitats, such as Horsell Common.

The Sustainability Appraisal is unnecessarily extensive, with little meaningful content. Queries the following:

- development cannot bring a positive impact on health – with fewer trees and greenery, more cars and pollution, more water extraction and more waste;
- why would public open space not be provided irrespective of whether new housing is built;
- designing in natural surveillance – what is this;
- provision of sustainable transport modes won't make any difference – people will use cars even for the shortest of journeys;

- does not regard the 'brownfield' parts of the site as any less valuable than the greenfield parts – house building on this area cannot be justified on the basis that it is previously development land – it still has landscape assets;
- tree surveys are meaningless;
- it is not guaranteed that habitat features and connections of biodiversity importance will be retained – just 'where possible';
- design and landscaping will not be sufficient to disguise the construction of hundreds of homes;
- how will sustainably produced and local products reduce the impact of consumption – will hundreds of trees be cut down to be used in the construction of houses? What locally sourced materials will developers be using?
- assets of value will be preserved – does this include trees?
- how would the design of the development be adapted to the impacts of climate change?

The site should not be considered given the findings of the Landscape Assessment and Green Belt review. There is a reference to creating durable boundaries to the north of the proposed site to mitigate perceived sprawl of urban area and future merging of towns; this site would make a nonsense of the Green Belt, which was established as a 'durable boundary'. By building on Green Belt land of course it's a significant step towards merging towns. In another fifty years the 'durable boundaries' will be shifted again to accommodate more housing.

The collective development of Fair Oaks Airport, the McLaren Technology Centre and the Martyrs Lane site would be unacceptable, surrounding Horsell Common with development. The SPA would become overused by the public.

Also opposed to the building of homes on previously identified sites. The problem is not a housing shortage – it is a national problem of overpopulation.

#### **Officer Response:**

The objections to the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

Policy CS8: Thames Basin Heaths Special Protection Areas (SPA) of the Core Strategy accords priority to the protection of the SPA. The policy provides a robust planning policy framework to make sure that no sites are allocated or granted planning permission for new residential development within 400m exclusion zone of the SPA. Were the Martyrs Lane site to be safeguarded, no residential development would be permitted within this zone. New residential development within the 400m–5km zone would be required to make a financial contribution towards the provision of SANG and SAMM. The policy allows bespoke SANGs to be secured if it is considered feasible and deliverable. The Council has identified sufficient SANG capacity through existing SANG sites and proposed allocations in the draft Site Allocations DPD to enable the delivery of the Core Strategy and beyond. The Council will engage with Natural England – who have been consulted during this exercise – to agree the nature and size of SANG that will be needed to serve this development if it is allocated. The Council will initiate

this discussion at the appropriate time. If sufficient SANG land could not be identified to serve the development at the Martyrs Lane site, the development would not meet the requirements of planning policy, which would be a material consideration in the assessment of any planning application. This would also be the case for the originally identified sites.

It is acknowledged that the site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to ensure that important wildlife features and landscape features are protected, including those surrounding development sites (which are likely to be in place in future iterations of the DPDs). Any planning application for development on this site would need to comply with these policies if it were to gain planning approval. In particular, policy CS7 Biodiversity and nature conservation, restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected. The Council's response to these comments can be accessed for further information.

The Sustainability Appraisal Report is a requirement of the Planning and Compulsory Purchase Act 2004. The SA Report also encompasses the requirements of the European Union Directive 2001/42/EC (SEA Directive). The Council appreciates that the SA Report is a lengthy document, but the aforementioned legislation and regulation prescribes the content and structure of an SA Report: it is fundamental to the preparation of the Site Allocations DPD to ensure its soundness at Examination.

Each site is assessed against the Sustainability Appraisal Framework. This SA Framework was informed by several earlier stages including the formulation of SA Objectives; the review of plans, programmes and strategies which are relevant to the Site Allocations DPD; analysing baseline information; analysing consultation responses on the content of the SA Framework; and including the requirements of the SEA Directive. The full SA Framework is available within the main SA Report at Table 5, and contains a series of 'decision-aiding questions' which provide further detail and the context within which the outcome of the individual site assessments were made. The assessment tables need to be read in conjunction with the SA Report in order to understand how each component of the SA Framework was designed, and to gain a greater understanding of the methodology for scoring. In particular, refer to Section 10 and 11, and to Appendix 1 which details which plans, programmes, policies and strategies fed into the SA Framework. For example, the decision-aiding questions under SA Objective 2 indicate how development can bring a positive impact on health by supporting the provision of key health services; and improving accessibility to leisure and open space for informal and/or formal recreation where these opportunities did not previously exist on the land. Objective 12 is to 'reduce the impact of consumption of resources by using sustainably produced and local products' – the decision-aiding questions in the SA Framework expand on the meaning of this objective, and on other objectives queried in the representation (such as how development can be designed to adapt to the impacts of climate change). Trees are considered an asset of value: the Council has recently adopted the Development Management Policies DPD, containing

policy DM2 Trees and landscaping, setting out detailed criteria for the protection of existing trees and landscaping with which development schemes must comply.

It should be noted that the SA Report is an integral part of the Site Allocations DPD process – which informs decisions about the sustainability and selection of all reasonable site allocation options – but it also forms part of a wider evidence base, and its recommendations are not considered in isolation.

The Council does not assume that development is justifiable on all previously developed land. Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. The site is being considered for future development due to a change in circumstances with the McLaren site after the draft Site Allocations DPD was published for Regulation 18 consultation (the planning conditions attached to the latest planning approval at the McLaren site ref: PLAN/2014/1297 led to a change in direction for McLaren, making the land available for consideration for future development). The Council wanted to ensure that all reasonable options had been assessed before coming to a decision about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination.

It is acknowledged that the conclusions of the Woking Green Belt review by Peter Brett Associates (2013) and the Landscape assessment and Green Belt review by Hankinson Duckett (2016) demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion to the Green Belt. However, it is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

Paragraph 1.10 of the Regulation 18 Issues and Matters Topic Paper explains why the Green Belt boundary is being reviewed. It also explains at paragraph 2.10 that evidence in the Green Belt boundary review report demonstrates clearly that beyond the sites being allocated and safeguarded in the DPD, no other sites can be identified in the Green Belt for development purposes without significant damage to its purpose and integrity. It is therefore unlikely that the Green Belt is repetitively reduced in future years, with further shifts in the boundary, to accommodate more housing.

At this stage, there has not been a detailed assessment to determine the cumulative impacts of development at Martyrs Lane, Fair Oaks and Longcross. However, under the Duty to Cooperate, Woking would take a positive initiative to call for partnership working to assess the cumulative impacts of the various developments with a view to identifying specific measures that could be implemented to address any adverse impacts on the strategic and local road network, and on the natural landscape and assets. The three authorities involved have already met to agree the way forward on partnership working to meet this objective.

**Contributor Reference:** 01074/1/001  
**Customer Name:** Ms Peggy Last

### **Summary of representation:**

Support proposal. Consideration should be given to:

1. Some of the Green Belt land has been previously developed;
2. A single site of this scale would bring economies of scale in its development, and help resolve infrastructure concerns;
3. The A245 through West Byfleet and over the M25 bridge does, however, have little spare capacity.

### **Officer Response:**

Support is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings, and some has been previously developed. However, the Council has assessed a wider parcel of land and carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors. Other sections of this Issues and Matters paper address some of these other factors in detail.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy (an example is the Infrastructure Delivery Plan which is available on the Council's website). The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The A245 has been identified in the transport assessment as a potential traffic hotspot. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of

the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

**Contributor Reference:** 01114/1/001  
**Customer Name:** Mr Stephen Higham

**Summary of representation:**

The proposed site to the east of Martyrs Lane is not suitable for development for the following reasons:

1. The scale of the development would overload the local infrastructure and would cause large problems both for existing residents of the area and any new residents. The local roads can barely cope with the peak hour traffic as it is now so to add an extra 1500– 2500 vehicles to overcrowded roads would cause traffic problems each and every day, resulting in pollution and therefore impact on everyone. It would also impact on people passing through the area as the journey time would be increased.
2. It is not enough to consider public transport as a possible part solution as the location means that people using the railway would need transport to and from the station and local buses are inadequate.
3. The loss of green belt land would be detrimental to the air quality of the area with loss of green lungs by way of trees etc at the same time as increasing atmospheric pollution through traffic fumes and everyday living pollution.
4. There is already a loss of local habitat for wildlife and pressure on open spaces nearby such as Horsell Common, leading to litter, dog fouling and footpath degradation so to further increase pressure on this space would have an even greater negative impact.
5. There would need to be much greater provision of other local services for residents ie. primary schools, secondary schools, doctors surgeries etc. There is not sufficient space to provide all of these in the area so either more land would be taken or more journeys would need to be made.
6. The plan for Woking would be better served by the other smaller developments which can be integrated into the local area in a much easier way with less impact on each area.

**Officer Response:**

Objections are noted. The merits of developing six smaller sites rather than one larger, single site in terms of integration into the local area are noted, and will weigh in the balance of considerations by Members.

Traffic and infrastructure (including public transport provision) issues associated with the potential development of land to the east of Martyrs Lane are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. This includes the Council's response about public transport connectivity, and access to rail stations.

There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The sites' proximity to the Horsell Common Thames Basin Heaths SPA and SSSI is noted. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy. The Response Topic Paper also provides a detailed response regarding the protection of wildlife.

**Contributor Reference:** 01136/1/001  
**Customer Name:** Mr Eric Mamet

**Summary of representation:**

Opposed to the proposal. The Green Belt land provides breathing space to the local community.

Local traffic is already a problem, and dangerous to cyclists.

The concentration of development on one, large site does not amount to sustainable development.

**Officer Response:**

Objections are noted. The Regulation 18 Consultations Issues and Matters Topic Paper sets out in detail the justification for releasing Green Belt land for future development, and how in doing so, it will not undermine its overall purpose and integrity (see Sections 1 and 2).

The Council is fully aware of local residents' concern about the existing traffic conditions on various transport routes and takes those concerns seriously. The outcome of a series of transport assessments conducted to quantify and forecast traffic impacts of developing the allocated sites have shown that existing levels of congestion, including on the A320, are likely to be exacerbated. The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The transport studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives.

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 01549/2/001

**Customer Name:** M Y Foat

**Summary of representation:**

The Woodham Court site should be taken into consideration for sustainable development. It is really brownfield, and it is disappointing to see that it is being ignored. Having to wait until 2027 is not helpful, when information relating to the site has been submitted years ago.

**Officer Response:**

Support for the site is noted.

Although part of the site has been developed, nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites identified for safeguarding. As shown on the proposal map, the site is within Green Belt and Green Belt policies apply.

As set out in Section 2.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council, as part of the Site Allocations DPD process, is seeking to safeguard land for future development needs between 2027 and 2040. This is also explained in the Duty to Cooperate Bodies Topic Paper.

It should be noted that the site was comprehensively assessed as part of the Draft Site Allocation DPD. The site was ruled out in part because it would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the site would be too isolated to be a standalone development.

The availability of the land for development will help inform members decision on the Council's preferred safeguarding approach.

**Contributor Reference:** 02718/1/001

**Customer Name:** Woking Constituency Labour Party

**Summary of representation:**

Concerns with the proposal to replace the other six sites with one site at Martyrs Lane. Worried this is a number issue in relation to responses received and the impact on the residences in Woodham Lane will be no less.

Impact of the development on Martyrs Lane, the risk of overdevelopment of the site, congestion of the A320 and recycling facilities. Loss of amenity of the Golf Course and the impact of the Sheerwater development close by.

The consultations must take all sites into account.

**Officer Response:**

The Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The traffic implications for developing the site have been addressed above. Any detailed transport assessment will take into account background traffic generated by the existing uses on the site, including the recycling centre. Similarly, any measures of mitigation to address forecast traffic impacts will seek to address the cumulative traffic impacts generated from the entire land.

The social and environmental implications of the recycling centre will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the

amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 00967/1/001  
**Customer Name:** Mr Robert Streeter

**Summary of representation:**

A key consideration is the impact on the road infrastructure, notably the A320 and A245 which are busy local and regional roads.

Development would require major improvements to these roads to manage additional capacity and ensure traffic flows. This will maintain journey times and limit pollution from standing traffic. Road widening is one possible solution and an impact assessment should be carried out by the Highways Authority.

Congestion negatively impacts residents through increased journey times and poor health. It also restricts access to local amenities and generally makes the area less attractive for new and existing business.

**Officer Response:**

The representation regarding highways has been noted. The Council has addressed the issues raised in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. As set out in the topic paper, the Council is working in partnership with the County Highways Authority to identify hard and soft mitigation measures to minimise any development impacts, including those on traffic flows and air pollution. This partnership working will take place regardless of what site(s) the Council decides to safeguard for future development needs.

**Contributor Reference:** 00981 / 1 / 001  
**Customer Name:** Ms Jacquelyn Douch

**Summary of representation:**

Strongly object to the proposed Martyrs Lane allocation.

Such a large number of houses will have an adverse impact on the local road network with overloaded traffic and congestion. It shows a disregard to local residents.

The local area does not have the necessary infrastructure to support such a development with doctors and schools already at capacity.

Runnymede Borough Council is also considering development in Ottershaw and if all allocations are agreed then how is the area to cope with the increased population without the resources or road capacity.

Would personally be affected by the proposed safeguarding of the site.

The Guildford Road is already busy and there have been several fatalities in the past few years, and further development will make the road unsafe.

Consider this representation as an objection to the proposed safeguarding of this site.

**Officer Response:**

The Council has addressed the representation regarding the road network and the provision of infrastructure in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

As set out in the Topic Paper, under the Duty to Cooperate the Council is working with neighbouring authorities including Runnymede and Surrey Heath as well as the County Highways Authority to identify development impacts on the local road network. As part of this work, the Council will determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts.

**Contributor Reference:** 00973/1/001  
**Customer Name:** N C R Duffield

**Summary of representation:**

Concerned about the proposal to add 220 dwellings in Byfleet.  
Large areas of land are flood plains and this has been ignored in recent planning decisions.  
There are already traffic problems with the road network due to recent development and additional development will make the situation worse.  
Byfleet will be over developed with no supporting infrastructure such as healthcare facilities.  
Parvis Road is a main road link in the area and already is at capacity.  
The Council should focus development in the empty offices and houses. This will also increase Council Tax receipts.

**Officer Response:**

The Council notes the reasons against development in Byfleet. These matters have already been addressed by the Council during the Regulation 18 consultation. This can be found within the Regulation 18 consultation Issues and Matters Topic Paper which is on the Council's website.

In addition, the Council's Infrastructure Delivery Plan notes that at present there is adequate GP provision to meet overall demand in the Borough. Whilst this is the case, it is also accepted that there might be locally specific pressures of over subscription that needs to be addressed. Whilst traditionally health provision reacts to meet projected demand, the Council is seeking to work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

**Contributor Reference:** 00979/3/001  
**Customer Name:** Mr Andrew Halstead

**Summary of representation:**

Objects to the proposal to designate the Martyrs Lane site for Woking's future housing needs. The site is unsuitable for 3000 plus houses for the following reasons.

The proposal will be a massive intrusion into the Green Belt in north Woking. The other safeguarding proposals would spread development evenly around the Borough and a more sustainable solution that putting all development in one location.

The proposal should not be considered in isolation as there are development proposals for Fair Oaks and Sheerwater. The road network that serves these areas are already at capacity and further development would make the situation worse.

A large housing development would have a significant adverse impact on Horsell Common, as will Fair Oaks if that too is developed for housing. Horsell Common is a SSSI and part of the Thames Basin Heaths SPA, and contains protected heathland birds. They would be at risk should the development take place due to an increase in recreational usage of the site. Horsell Common is also an important habitat for insects and reptiles and therefore should not be put at risk of degradation by placing most of Woking's future housing development in close proximity.

The proposal is in conflict with the sustainable development requirements of the NPPF. In addition, it is also in conflict with paragraph 114,

**Officer Response:**

Objection noted.

It should be noted that the consultation on land to the east of Martyrs Lane is to safeguard the site for future development needs between 2027 and 2040. The consultation specifically noted that it is anticipated that the site is sufficient to enable the delivery of at least 1200 net additional homes and the necessary green and other infrastructure to support the potential development of the site. Therefore the reference to 3000 plus houses in the representation is in excess of what the Council was consulting on.

The representations regarding the Green Belt, traffic and congestion, wildlife and sustainable development have been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

In addition, as part of the Martyrs Lane consultation the Council has consulted with a range of wildlife and environmental organisations including Natural England, Surrey Wildlife Trust and

Horsell Common Preservation Society. Their individual representations have been considered by the Council and will inform the Council's decision on its preferred safeguarding option.

It should also be noted that the Council has identified a number of SANG's across the borough in accordance with the Thames Basin Heaths SPA Avoidance Strategy and Core Strategy Policy CS8. These green spaces provide a suitable alternative to the Thames Basin Heaths SPA's to ensure that new development across the borough does not have an adverse impact on the SPA. These sites are set out in the Regulation 18 version of the Site Allocations DPD.

Whilst the Council has responded to the representation on sustainable development within the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper, it should be noted that the Council has a number of adopted policies in place to protect and enhance the natural environment as well as ensure that development is designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These are clearly set out in the Core Strategy and the Development Management Policies DPD, both of which have been approved by the Secretary of State. In addition, the Council has also published Natural Woking which is a biodiversity and green infrastructure strategy for the area. This seeks positive outcomes for habitats and people, by enhancing provision and accessibility to green spaces; conserving appropriate existing biodiversity and habitats; and creating opportunities for species to return to the Borough.

Due to former land uses within the Martyrs Lane site, any potential development could remediate contaminated land that exists on the site. The proposal therefore is consistent with Paragraph 109 of the NPPF. This has also be set out with the Sustainability Appraisal for the site (objective 8) which is on the Council's website.

**Contributor Reference:** 01005/1/001  
**Customer Name:** Ms Katrina Warne

**Summary of representation:**

The land to the east of Martyrs Lane is a better site if more housing is required. However concerned about the increase in traffic as the existing roads are at capacity. The existing situation has not been helped with the on going problems on Chertsey Road.

**Officer Response:**

Support for the principle of safeguarding this site for future development needs is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

### **Summary of representation:**

Objects because:

- Would impose intolerable strains on overstretched road infrastructure
- Pressure on Horsell Common due to increased leisure use
- Irrational to propose a site with development potential for over 3000 units in substitution for the previous sites that offer only 1000
- A more modest proposal might be more appropriate e.g. on New Zealand golf course
- Future development should be dispersed around the Borough rather than concentrated in one single area, in the interests of fairness

### **Officer Response:**

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses some of the issues raised in the representation in detail, including infrastructure capacity (including transport infrastructure).

The sites' proximity to the Horsell Common Thames Basin Heaths SPA and SSSI is noted. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The site would not be safeguarded for 3000 units. It is anticipated that the site is sufficient to enable the delivery of at least 1200 net additional homes, as well as the necessary green and other infrastructure to support the potential development of the site.

Due to the need to ensure a defensible boundary of the Green Belt, the northern parcel of land above the Golf Course has been included in the proposal. The size of the site will allow future development needs to be delivered. Availability of land is a significant material consideration (but not the only consideration) for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. The land east of Martyrs Lane is in multiple ownership, and the New Zealand Golf Course and McLaren collectively owns a significant proportion of the land. The New Zealand Golf Course has written to the Council and has made formal representation as part of the consultation to confirm that the part of the land that is in its ownership will not be made available now, in the future and never to meet future development needs. In this regard, there is no expectation for a change in their position within and beyond five years. The representations from the New Zealand Golf Course are addressed in full separately.

The lack of availability of the above sites could cast doubt on the deliverability of the land if it is safeguarded. To put it into context, assuming the two sites will not be available to meet

future development needs and the Surrey County Council's Waste Safeguarded Site is also not available, the residual land will only deliver about 300 dwellings (at 30 dph) as against the 1,200 dwellings that the Council wish to safeguard land. If the Waste Safeguarded Site is made available, there will be sufficient land to enable the delivery of about 600 dwellings at the same density. This is still significantly short of what is needed. Importantly, the Council has to make sure that any land that it safeguards would not lead to an isolated development within the Green Belt.

It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

**Officer Response:**

Support noted

**Contributor Reference:** 00888/1/001  
**Customer Name:** Mrs Carol Scrivner

**Summary of representation:**

The site is big enough (112 hectares) to accommodate 1,200 houses, including affordable housing, one or more Gypsy and Traveller sites, and the necessary infrastructure of shops, primary schools, health centre etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities. It will also simplify the process for obtaining planning permission

There are major employers close by: St Peter's Hospital, the Animal and Plant Health Agency, McLaren Technology Centre and the Brooklands Retail Park. A new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking Town Centre and the mainline railway station to the South without encountering the traffic delays where roads cross railway lines. Bus routes and cycle routes, including to Woking Town Centre, exist already. There is little development along the A320 North of Woking, making road widening relatively easy if necessary. This is a better proposal than the option of building South of Woking where the A320 is often at a standstill in the morning rush-hour and that is before the new Hoe Valley School has opened.

The Martyrs Lane site, although in the Green Belt, has no other National or Local landscape designation unlike some of the other proposals, such as those here at Mayford. There are no Escarpment and Rising Ground Landscape Importance issues such as those faced in GB10, GB11 and GB13.

Most of the site is clear of Flood 2 and Flood 3 designations which should make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing where the Council's Core Strategy (CS12) states that 35% of all new homes should be Affordable Housing but admits that this target is not being met. In a similar vein, the Council also admits that it is struggling to meet its target for the provision of Specialist Residential Accommodation (CS13) for older people and vulnerable groups as "land values for sites allocated for general residential development can make securing sites for more specialist accommodation difficult in terms of viability and availability." Use of the Martyrs Lane site can help Woking to meet its requirements under CS12 and CS13.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking in Heathlands Ward (Mayford), restricting Gypsy and Traveller choice as to where they can live. Gypsy and Traveller sites would be sustainable by virtue of being within the residential development site and would satisfy CS14, Gypsy and Traveller pitch criteria, which includes the requirement to avoid unacceptable adverse impacts on the visual amenity and character of the area. Gypsy and Traveller pitches included in this residential development would count towards the requirement for Woking Borough Council to find 24 pitches from 2016–2027, and an additional 9 pitches from 2027–2040. Land at Martyrs Lane could easily accommodate one or more Traveller sites to satisfy a target of 15 pitches, thereby removing the Ten Acre Farm (GB7) Traveller site proposal.

Because of the size of the Martyrs Lane area – it is almost twice the size as the six sites it might replace – it should be possible to build all the properties necessary to fulfil Woking's future Housing and Traveller needs, even if it subsequently turns out that more than 1,200 houses are needed, or if there is a further requirement post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers as set out in the Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At Regulation 18 stage, officers had recommended to Council that need for Traveller accommodation should be met at Five Acres and Ten Acres. That need is 19 pitches up to 2027. At the Council meeting, Members requested that officers revisit this recommendation and report to them before making a decision about their strategy for Regulation 19 consultation. Officers accordingly are investigating this matter and will be reporting to Council in due course.

A detailed flood risk assessment will be a requirement of any development proposal that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 00919/1/001  
**Customer Name:** Worplesdon Parish Council

**Summary of representation:**

To prevent the coalescence of Woking and Guildford, the strategic gap between the two towns should be strenuously protected against encroachment into the Green Belt. There is insufficient parking available at Worplesdon Station to cope with current demand.

Lack of street lighting at Worplesdon Station due to the County Council insufficient funds and the detrimental environmental impact this would have on Prey Heath Common SSSI, Smarts Heath SSSI and Whitmoor Common SPA/SSSI.

The A320 Woking Road is already running close to capacity (DFT statistics for 2015 shows 19,321 vehicle movements per day). Given the potential impact on the local highway network of the proposed brownfield development at Slyfield and the proposals for Gosden Hill, Burpham together with other significant development in the Borough of Guildford and surrounding towns this is likely to increase significantly.

The Parish Council feels the substitution of land parcels GB4, GB5, GB10, GB11, GB12 and GB13 with Martyrs Lane offers the least worst option. Any development at Martyrs Lane to come with the strong caveat that Woking Borough Council must ensure the Environmental Protection of Horsell Common SPA/SSSI.

**Officer Response:**

Support noted.

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding infrastructure, traffic, Worplesdon Station and pavements have already been addressed in the 'Regulation 18 issues and matters Topic Paper', please refer to section 1.0, 12.0, 14.0, 15.0, E, V and U for the Council response.

The Council has undertaken a Green Belt Review, which considered the purposes of the Green Belt. The report found that development of GB10 and GB11 would not cause merging of the two towns. This report can be found on the Council Website.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

**Contributor Reference:** 00926/1/001  
**Customer Name:** Mr Brian McKendry

**Summary of representation:**

The A320 by the Martyrs Lane site is slow but rarely at a standstill during the rush hour whereas it is usually at a standstill in the stretch to the south of Woking which will soon become even more pressured due to school traffic once the new Hoe Valley School is opened. Access to the M25 is easier from Martyrs Lane than south Woking shortening journey times and limiting traffic through Woking itself.

There is far more land available for A320 development in the Martyrs Lane site area than to the south of Woking, making this and potential future expansion more manageable. The size of the Martyrs Lane site enables a single housing estate to be developed rather than a number of smaller estates leading to savings on infrastructure costs.

Some of the alternative development proposals have national or local designations whereas the Martyrs Lane site, although green belt, has no designations.

**Officer Response:**

Support noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of

studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts at the development management stage, this would be the same process for the other sites as well. The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

**Contributor Reference:** 00905/1/001  
**Customer Name:** Mr Michael Le'Bez

**Summary of representation:**

Green Belt is allocated for a reason, such as to provide open spaces where environments are protected, for people, plants and wildlife and to protect against urban sprawl leading to loss of community identity.

The Green Belt in Byfleet has been slowly eroded. Byfleet village is already over developed without suitable community facilities e.g. a doctor's surgery, the schools are full, parking problems and traffic congestion.

In addition much of Byfleet is on a flood plain and any further development would worsen the frequent flooding problems.

The approved development at Broadoaks will cause further congestion on the roads in Byfleet and the surrounding area. The Broadoaks site and part of the Martyrs Lane site are on Green Belt land which has already been developed.

Green Belt is precious and the Council should respect our needs, our communities and our environment.

**Officer Response:**

The justification for the release of Green Belt land for development and future development needs has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding infrastructure, flood plains and traffic congestion have also been addressed in the 'Regulation 18 Consultation issues and matters topic paper', please refer to section 1.0, 3.0, 5.0, 15.0, J, K, L, and U for the Council's response.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

**Contributor Reference:** 00949/1/001  
**Customer Name:** Ms Linda Lewis

**Summary of representation:**

There is better infrastructure already in place than in comparison to the other sites such as access to the M25, Woking, West Byfleet, New Haw using the A245 and A320. Using the land currently allocated as a golf course and the other areas within the site that have a very low current population or no population appears to be a much better alternative. Also a new school is planned for the old Broadoaks site which would be easily accessible to the new site as bus and cycle routes are already in place.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

In terms of roads and infrastructure, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet more than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from

various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per

week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Customer Name:** Mr Andre Da Silva Goncalves

**Summary of representation:**

Since leaving London, the main things about Woking is the greenery and nature. Woking Borough Council will be letting themselves and the community down by building over the Green Belt. There must be another option.

**Officer Response:**

In terms of protection of the Green Belt. The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred

site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Contributor Reference:** 00801/2/001  
**Customer Name:** Mr Martin Foster

**Summary of representation:**

The site is unsuitable for many reasons such as Flood plain, unsuitable ground, green belt, too much traffic on bordering roads. Why not build affordable housing on the many sites currently occupied by empty offices?

**Officer Response:**

Please refer to the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper' for the matters of flood plain, Green Belt, traffic and unsuitable ground.

In terms of building affordable housing on empty office sites, the council has identified derelict office sites which could be used for housing within the Strategic Housing Land Availability Assessment (SHLAA). However, the outcome of the SHLAA indicated a shortfall in the capacity of the urban area to meet the requirement over the plan period. Overall, about 13 years supply of land could be identified in the urban area to meet housing need. The Inspector agreed that the Green Belt should be identified as a potential direction for future growth to meet housing need between 2022 and 2027. He concluded that 'by this approach the Core Strategy takes a justified and effective approach to issues relating to the Green Belt and the natural environment which is consistent with national planning policy'.

The Site Allocations DPD also safeguards sites for employment. It would be inappropriate to allocate all empty offices into residential use.

Moreover, the Prior approval Process under the provisions of Class O, Part 3 of Schedule 2 of The Town and Country Planning (General Permitted Development) (England) Order 2015 (as amended) allows for Offices (Use Class B1) to be converted into residential dwellings (Use Class C3) subject to specific criteria stated in the Order.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Contributor Reference:** 00808/1/001  
**Customer Name:** Ms Dawn Jolley

**Summary of representation:**

Objects to the use of land at Pyrford, Mayford, Byfleet and Martyrs Land. Do not agree with building 292 dwellings per year as Woking is crowded enough and should not compromise existing residents. The population is already over 100,000 and Woking's location and infrastructure is the envy of the country and should be kept that way. Objects to the removal of the Green belt and Woodlands. The roads cannot cope with the extra traffic. An extra 50 houses would be acceptable in Woodham but not 500 houses.

**Officer Response:**

The justification of 292 new dwellings each year has been comprehensively explained in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 1.0.

In terms of traffic congestion, the loss of Green Belt and the woodlands, these issues have all been addressed in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper ', please refer to each particular section for the Council response.

**Contributor Reference:** 00814/1/001  
**Customer Name:** Ms Lynn Spankie

**Summary of representation:**

The surrounding area is already saturated with traffic so couldn't cope with any further cars.

**Officer Response:**

In terms of traffic congestion, this issue has been addressed in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper', please refer to the Transport section for the Council response.

**Contributor Reference:** 00815/1/001  
**Customer Name:** Mr Martin Spankie

**Summary of representation:**

The A320 is one of Woking's vital transport links, but is quite incapable of absorbing the additional traffic that would be generated by the East of Martyr's Lane proposed development.

**Officer Response:**

In terms of traffic congestion, this issue has been addressed in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper', please refer to the Transport section for the Council response.

**Contributor Reference:** 00769/1/001  
**Customer Name:** Mr Sachin Adhiya

**Summary of representation:**

Development would ruin the most beautiful and ecologically rich area of the Woking borough. There are other locations of the borough where development is more conducive.

**Officer Response:**

The land is not covered by any absolute environmental constraints. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

**Contributor Reference:** 00818/1/001  
**Customer Name:** Ms Elaine Fawdry

**Summary of representation:**

The proposal to develop the site to the East of Martyr's Lane is far superior as it is less bity and a cohesive community would be established. This land has no real benefit as a community asset as it is, with the exception of the excellent Recycling Centre. We need more homes but the Council must make sure that infrastructure needs are met so as not to overburden existing facilities.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy and indeed for the development of any of the other proposed six safeguarded sites. An example is the Infrastructure Delivery Plan which is available on the Council's website.

**Summary of representation:**

There is insufficient infrastructure and the loss of wildlife.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

**Contributor Reference:** 00702/1/001  
**Customer Name:** Ms Edwina Parsons

**Summary of representation:**

Support the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040. Some of the reasons for this are as follows:

It is on previously developed land which is not true of the other proposed sites. The Infrastructure in the other sites such as A245 through West Byfleet & over M25 bridge has virtually no capacity left, especially when other new development in the area is taken into account.

Safeguarding one site for the future housing needs of Woking would probably mean "economies of scale" and would help to find solutions to many of the infrastructure concerns.

The Amenity value of the Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

The Heritage features of the area which incorporates the two Pyrford fields includes the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.

The Landscape in Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance.

The Agriculture of Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% (excluding Martyrs Lane) of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The reference to Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance' is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 - 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 - 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 - 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed

nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Contributor Reference:** 00706/1/001  
**Customer Name:** Mr Robert Tilley

### **Summary of representation:**

It may be necessary that Green Belt land be use to meet the house building targets beyond 2027. The question therefore is which site (s) in the Green Belt should be used.

In the earlier consultation arguments were made against the 2 Pyrford sites, particularly to the east of Upshot Lane which may impinge on views from the Surrey Hills AONB. Both sites are farmed and are some distance from important transport, schools, shopping and health facilities in West Byfleet and beyond. These sites are attractive environmentally and are not sustainable. Some of these arguments equally apply to the other 4 sites in Byfleet and Mayford.

The Martyrs Lane site whilst again in the Green Belt has many advantages and will be better than the 6 sites in Pyrford, Byfleet and Mayford. As much of the north of the site is not attractive, it comprises a former nursery and recreational facilities both no longer used and there is some evidence of former military use. There are no public right of ways and therefore not accessible by the public.

The northern section was given planning permission of the expansion of the McLaren site. McLaren's later substituted a site on their main site to the east but development of this part of the site has been accepted. The southern part of the site is presently the New Zealand Golf Club. This is not a local amenity and there are other golf courses available.

The site is more that large enough to provide land for the 1000+ house needed. The site could also provide space for schools, health, leisure, sports and other amenities. Employment sites can be allocated. Road links to the M25 and West Byfleet and Woking stations are good.

The site has good transport links and can provide space to build local amenities not only for the housing built here but for this northern side of Woking which is currently short of capacity.

### **Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to

enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site

Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

In terms of the issues raised about the other sites proposed such as justification for the release of Green Belt land for the development, infrastructure and character, these issues have already been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 1.0 and 7.0 for the Council's response.

**Contributor Reference:** 00715/1/001  
**Customer Name:** Mr Peter Spreckley

**Summary of representation:**

Supports the use of the land east of Martyrs Lane in preference to the sites listed in the consultation document, particularly those in Mayford and Hook Heath, which have previously been included in draft Site Allocation DPD's. The reasons set out in the consultations document that it lacks special character, its partial disuse/disrepair, and its proximity to transport links and to employment opportunities are agreed upon. In addition, this large compactly-shaped site should make it possible to provide both an attractive place for a good number of people to live, and a green perimeter zone which both minimises any impact of the development beyond its boundary and enhances the pleasure of living there. This would be much more difficult, to achieve on smaller sites, particularly those on sloping ground.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

**Contributor Reference:** 00724/1/001

**Customer Name:** Dr Jan Whitby

**Summary of representation:**

The traffic Surrey-wide is becoming intolerable. To add even more cars to the road leading both the M25 and the centre of Woking would make most drivers' already difficult journeys even worse. The local infrastructure is also unfit for purpose. The average time for an appointment at my GPs is 6 weeks. The school of choice may not always be open to parents. Parking on roads is ever more challenging.

To add to an already overburdened social infrastructure would make Woking a less attractive place to live.

**Officer Response:**

In terms of local traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

If a Planning application did come forward for the site the Council's Parking standard document would be complied with to ensure there would not be a proliferation of on street parking.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a

development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, GPs, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account. Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal.

**Contributor Reference:** 00750/1/001  
**Customer Name:** Mr Alan Smith

**Summary of representation:**

Opposed to sign Green Belt land for development as it is contrary to the original reason for the Green Belt. It is impractical to use Byfleet due to the lack of infrastructure, flood plains, difficulty in obtaining medical appointments, insufficient school places and traffic congestions. These proposals to build on Green Belt must be rejected and the Council should exhaust brownfield sites. The existing previously developed sites at Broadoaks must be the limit of green belt usage.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation issues and matters topic paper. The matters regarding infrastructure, flooding, traffic, medical centres and brown field sites are also addressed in the 'Regulation 18 Consultation issues and matters topic paper', with particular reference to section 1.0, 3.0, 5.0, 11.0, U and M.

As part of preparation of the Draft Site Allocation DPD, 125 alternative sites were assessed. The assessment is set out in the Sustainability appraisal, based on this and other evidence including the Green Belt Review, the most sustainable sites were put forward for the Draft Site Allocation DPD.

The representation is not clear to what site it is referring to. Nevertheless, there is the opportunity at Regulation 19 Consultation to recommend sites not currently allocated by the Council.

**Contributor Reference:** 02677/1/001  
**Customer Name:** Ms Valerie Hive

**Summary of representation:**

Objects to the proposal for the following reasons:

- Taking of Green Belt;
- Endangering natural habitat and wildlife;
- Infrastructure;
- Traffic gridlock;
- Overcrowded health centres and hospitals;
- Over-subscribed schools;
- Road maintenance not good;
- Flooding;
- Urban sprawl with Fair Oaks;
- Only one hourly bus;
- More cars, lorries, vans etc.;
- More pollution;
- Higher noise levels.

An extra 3,500 houses would bring 5,000 extra cars, with further debris thrown from vehicles (e.g. cigarette butts), which contribute towards blocking drains.

The site would need yet further drainage improvements and the current pipe works are causing major disruption as it is.

**Officer Response:**

Objection is noted.

The majority of issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including impacts on Green Belt and urban sprawl; impacts on wildlife; infrastructure provision; traffic implications; flood risk; public transport provision.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance, including the Fair Oaks Garden Village proposal. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. Partnership working with neighbouring boroughs continues as the Site Allocations DPD progresses, and the cumulative impacts of the Fair Oaks proposal will be a key

consideration that will be taken into account by Members in deciding which proposal is the most sustainable option.

Officers are satisfied that if the site is safeguarded it can be delivered without unacceptable risk to air quality. There is no declared air quality management area in the vicinity of the Martyrs Lane site, and the Council has robust policies to manage air quality impacts as a result of development. In particular, policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as DM5, DM7 and DM8 of the DPD that would apply to manage other sources of pollution as a result of development, such as noise.

The proposal is for the delivery of around 1,200 new homes. It is acknowledged that this would have impacts on the highway and the traffic implications are explained in more detail in the Topic Paper, as referenced above. It is true that a development of this scale would require different types of supporting infrastructure to be sustainable, such as improved drainage and water provision. The relevant infrastructure providers have been contacted as part of the consultation and their responses will be taken into account. Any potential disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr D R Hallett

**Summary of representation:**

Support the need to build more homes for present and future needs. One development seems more sensible than piecemeal extensions around the borough. Whilst the first proposal meets targets, it could result in too many add ons and become an annexe to Guildford. Support for the Martyrs Lane proposal and the concept of Goldsworth Park works very well with a strong community feel.

The Martyrs Lane site is big enough to accommodate 1200 houses, including affordable housing, and the necessary infrastructure of shops, primary schools, health centre, etc., without encroaching on the golf course. It will also simplify the process for obtaining planning permission. There is little development along the A320 north of Woking, making road widening relatively easy if necessary.

Although in the green belt, the site has no other national or local landscape designation unlike some of the other proposals. North of the golf course the land is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site, presumably because the land is suitable for development.

As it is a sizeable area it should be possible to build all the properties necessary, even if it subsequently turns out that more than 1200 are needed, or if there is a further requirement post 2040. The town centre is developing well as a commercial, retail and leisure area.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation,

Sites of Special Scientific Interest or common land. The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected and indeed this is true for all the sites proposed.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00665/1/001

**Customer Name:** Mr Len Boyce

**Summary of representation:**

The unique nature of our town a mixture of green belt residential and non residential land should never be changed. Allowing this development and the development of Fair Oaks Airport will destroy the town. There is no need for these developments. However, there is a need for the green belt land to prevent traffic and over population. The current infrastructure including road and rail links are already extremely busy as can be seen by heavy traffic on the A320 and the trains which are full every day.

**Officer Response:**

In terms of protection of the Green Belt. The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors

and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of the railway, Network Rail, who is responsible for rail infrastructure, has also identified a number of capacity improvement projects along the Waterloo to Portsmouth Line. These projects are set out in the 'Wessex Route: Summary Route Plan' report which is available on the Network Rail website.

**Summary of representation:**

Major improvements to the existing infrastructure are needed to accommodate this huge number of homes, people and cars. This development is not sustainable. The roads, doctors, hospital and schools are already saturated as it is. The level of public services in Runnymede is currently not satisfactory and needs heavy investment.

**Officer Response:**

In terms of infrastructure such as the roads, doctors, hospital and school, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

In terms of road congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of sustainability, the Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Customer Name:** Ms Helen Golding

**Summary of representation:**

Opposed to all proposed development on Green Belt land within the Borough.

Particularly opposed to developments in Byfleet, because:

- Green Belt should be protected and shouldn't be developed on;
- Lack of infrastructure in Byfleet (school places, doctors etc) to accommodate hundreds of new homes;
- Flooding problems will worsen with additional dwellings being built;
- Roads around Byfleet/Brooklands are already severely congested and can't cope with hundreds more cars using them daily.

**Officer Response:**

Objection to using Green Belt land for development is noted. The Regulation 18 Issues and Matters Topic Paper sets out in detail the justification for the release of Green Belt land for future development in the Borough (Section 1) and for safeguarding Green Belt land to meet future development needs (Section 2). Section 3 explains how the infrastructure requirements of the sites – including the Byfleet sites – have been assessed and how adequate infrastructure would be secured (including transport infrastructure); Section 5 sets out how flood risk implications of the sites were assessed; and Section U addresses traffic concerns in more detail.

**Contributor Reference:** 00614/1/001  
**Customer Name:** Ms Christine Northrop

**Summary of representation:**

Supports the proposal as long as it doesn't encroach on the wooded areas around the six-cross roundabout roads and Horsell Common. Also believes the sites in Pyrford and Mayford should be safeguarded for future development.

**Officer Response:**

Support is noted. If the land were safeguarded for development and a planning application came forward, planning policy would require a full assessment of landscape, ecology, trees and other environmental assets to determine any potential impacts of the development. The design of the proposal would have regard to landscape features and designated sites such as Horsell Common. The Core Strategy and the Development Management Policies DPD contain robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. It is likely that similar planning policies would be in place as part of any future Development Plan for the area, which would apply if the land were released for development.

Support for safeguarding of Pyrford and Mayford sites is also noted.

**Contributor Reference:** 00622/1/001  
**Customer Name:** Ms Wendy Lynam

**Summary of representation:**

Opposes the proposal to build more houses around the West Byfleet area, specifically in Woodham. The roads in this area are already congested and often at a standstill during peak hours. West Byfleet does not have the infrastructure to be able to cope with even more housing. Together with the proposals to build more flats in the centre of West Byfleet itself, and the Broadoaks proposals, the collective outcome will be even more heavy traffic in the area.

Woodham does not need any more housing. It will eventually be impossible to move freely around West Byfleet area.

**Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including proposed sites in and around West Byfleet.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area (including roads around the West Byfleet area). The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Customer Name:** Mr Steve Hughes

**Summary of representation:**

Supports the proposal because:

- the Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from across the Borough;
- the heritage features of the area, which incorporates two Pyrford fields, includes the historic wooded grounds of Pyrford Court which are Grade II listed, Pyrford Village Conservation Area, Pyrford Common (designated as an SNCI), Aviary Road Conservation Area, and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.

**Officer Response:**

The merits of the proposal as set out in the representation are noted and will be considered by Members.

It should be noted that Policy CS17 of the Core Strategy supports the protection and enhancement of physical access, including public rights of way to open space and green infrastructure. Any development coming forward on allocated sites would be encouraged to improve the quality and quantity of the Green Infrastructure network as part of the planning application process.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD include robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage or biodiversity assets of the area.

Section 19 of the Regulation 18 Consultation Issues and Matters Topic Paper addresses the issue of whether the proposals – including those in Pyrford – will have adverse impacts on the heritage assets of the area, and Section 23.0 addresses the representation regarding the impact on local character. Section J addresses the impact of future development on wildlife and biodiversity.

**Contributor Reference:** 00627/1/001  
**Customer Name:** Ms Sally Pugh

**Summary of representation:**

Disagrees with the proposal for the following reasons:

1. Destruction of Green Belt;
2. Flood risks of the site and surface run off adding to flood risk;
3. Proximity to Horsell Common SSI and SPA;
4. Loss of recreational open space (destruction of golf course);
5. Pressure on traffic A320 and Woodham Road;
6. Concentration of development. A spread across other sites will better cope with integration.

**Officer Response:**

Objection to the Martyrs Lane Site is noted. The representations regarding Green Belt, flooding and traffic have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The sites' proximity to the Horsell Common Thames Basin Heaths SPA and SSSI is noted. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The Council acknowledges that any future development on land to the east of Martyrs Lane may result in the loss of recreational open space (ie. the golf course). It should be noted that planning policy in the Core Strategy permits the loss of open space where it can be demonstrated that an alternative and equivalent or better provision is made available in the vicinity, or the development is directly related to the enhancement of the open space. Any planning application coming forward for development at the site would need to take this into account. As part of this consultation, Sport England has been consulted on the proposal and their representation and the Council's response can be accessed for further information.

**Contributor Reference:** 00630/1/001  
**Customer Name:** Mr Stephen Cardis

**Summary of representation:**

Supports the proposal (subject to achieving high quality, sustainable development and satisfying access and traffic concerns) for the following reasons:

- The sites previously identified were subject to significant objections.
- The scattered nature of the multiple sites would have impacted adversely on their proposed locations.
- There was limited opportunity to provide significant new infrastructure to support the multiple sites – they were essentially large housing estates.
- The proposal provides the opportunity to create a new community with its own identity and character and with a mix of tenures and house types.
- The scale of the allocation also indicates the potential for significant new infrastructure to support the development. The Government is proposing a series of Garden Villages around the UK and this is one concept that should be considered for this area.
- Woking Council should consider allocating as much land as possible for Self Build which has the potential to provide young people opportunities to house themselves at much lower costs than traditional new building by developers.

Clearly any development of the scale proposed would have significant impacts on the local road network and early consideration should be given to minimise such impacts and to identify improvements required and funding mechanisms. Would also need to consider how a replacement site for the waste facility would be secured.

Woking has a good reputation for promoting sustainable development and this are presents an opportunity to innovate and achieve an outstanding form of development that sets new standards for such a development.

**Officer Response:**

The merits of the proposal as set out in the representation are noted and will be weighed in the balance of considerations by Members.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The scale of development at the six original sites would also facilitate the improvement of existing or provision of new infrastructure.

The Council are aware of how the Government is supporting proposals for garden villages, and should the land be chosen to be safeguarded for future development this will be considered when drafting the next stage of the DPD.

The Council has recently adopted its Development Management Policies DPD which includes a planning policy on self-build and custom-build houses (DM12). This policy provides in-principle support for these development proposals where they comply with all other relevant policies of the Development Plan. The Council is currently assessing the level of need for these homes in the Borough through the Strategic Housing Market Assessment and Strategic Housing Land Availability Assessment. The Council will consider allocating land for these types of homes based on this evidence.

The Council has carried out several studies to quantify and forecast vehicular trips and distribution that would be generated by various development options, including that at Martyrs Lane. The studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council would certainly aim to achieve a high standard of development at all of the proposed sites. Any development coming forward would be expected to comply with planning policy on sustainable construction which sets out standards for energy and water efficiency (currently CS22), and planning policy on design to achieve high-quality sustainable construction standards (currently CS21).

For information, Surrey County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs. The Council is committed to working with the mineral and waste authority as well as the relevant landowners on this matter should the Council decide to safeguard the site for future development needs.

**Contributor Reference:** 00633/1/001

**Customer Name:** Mr Jim Wallis

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

**Officer Response:**

Support noted

**Contributor Reference:** 00635/2/001  
**Customer Name:** Ms Hilary Davison

**Summary of representation:**

Objects to the scale of development in all proposals. There are too many houses planned for the network of roads, school services etc. in the area.

**Officer Response:**

Objection to development proposals is noted.

The case for allocating sites to accommodate future housing need is set out in detail in the Regulation 18 Issues and Matters Topic Paper.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses this issue in detail.

**Contributor Reference:** 00645/1/001  
**Customer Name:** Ubhayapriya Wijetunge

**Summary of representation:**

Woking is struggling to cope with traffic at the moment and this proposal would make matters worse, and decrease the quality of life in the Woking area.

**Officer Response:**

Objection noted. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The Council has conducted a series of studies to assess the likely impacts of development at all of the allocated sites on transport infrastructure. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development. Further detail on traffic implications of the proposal is provided in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Contributor Reference:** 00586/1/001

**Contributor Reference:** 00589/1/001  
**Customer Name:** Ms Catherine Miller

**Summary of representation:**

The area could be considered as a suitable alternative/substitute and offers some advantages over other areas.

**Officer Response:**

Support noted

**Contributor Reference:** 00598/1/001  
**Customer Name:** Mr John Fawcett

**Summary of representation:**

The proximity of the proposed alternative site at Martyr's Lane to the SSSIs and SPAs around Horsell make this substitution less agreeable. Nature should be protected. The pressure this development in such close proximity to these designated areas will pose a threat to the nature conservation on those zones. The increase in local population will almost certainly mean an increase in persons visiting the conservation areas, especially when added to the proposed development on the Fair Oaks airport site. People have to live somewhere but so do wild animals, some of which are already threatened with extinction due to loss of habitat.

**Officer Response:**

The Council recognises the proximity of the site to nearby protected sites for nature conservation. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land, and nearby land, can be protected. The representations of these organisations, and the Council's response, can be accessed for more information.

It should also be noted that any planning application for development at the site would be assessed against the Development Plan for the area at the time, which would include policies to conserve and protect biodiversity assets and designated sites from any adverse impacts.

**Contributor Reference:** 00600/1/001

**Customer Name:** Mr And Mrs Vernon And Jill Cornell

**Summary of representation:**

Support the proposal. If necessary to build on the Green Belt, this proposal offers the most practical solution, being large enough to accommodate all the dwellings needed in one place. There would also be room to provide the associated infrastructure, thus avoiding overloading existing facilities adjoining the alternative small dispersed sites. Apart from the golf course, this site is largely derelict and unused and has no special landscape or scientific restrictions on it.

Other positive reasons for choosing this site are:

1. The proximity of at least three large employers within easy reach and any neighbourhood centre would provide further employment.
2. Access to the town centre, bus, rail, road and cycle links are already in place. If necessary it would be possible to widen the A320 north of Woking as there is very little development along it and no railways to negotiate. This is not the case south of the town where the A320 is very congested at peak times and will become more so when the new Hoe Valley school opens. Other roads south of Woking are already heavily used as "rat runs".

With suitable protection for existing properties and boundaries, the proposal would offer the best solution.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land, whether it is at Martyrs Lane or the six originally proposed sites. Section 106 contributions will also be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

The Council has carried out a series of separate studies to quantify and forecast transport impacts of the different development scenarios. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Whilst the bus services might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

**Contributor Reference:** 00602/1/001  
**Customer Name:** Mr Barry Scrivner

**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, Traveller accommodation and the necessary social and community infrastructure needed to support it. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Masterplanning of the site would allow for the provision of affordable housing which is needed in the Borough as the Council is currently not meeting its targets. The site would also be able to accommodate specialist residential accommodation for older people and vulnerable groups.

The site could provide Gypsy and Traveller accommodation for those wishing to live in the east of Woking. All sites are currently in the southwest of the borough. This would also meet the requirements of Policy CS14 and meet Woking's current and future Traveller accommodation needs. Ten Acre Farm can therefore be removed as a Traveller site proposal.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

## Officer Response:

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all

assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 00607/1/001  
**Customer Name:** Mr Derek Hancock

**Summary of representation:**

Whilst the priority should always be to explore brown field sites first, the proposed option would seem to be the lesser of two evils. Much of the proposed land is a golf course, and there are several other courses in the area. Concentrating development in the one area would also lessen the impact on some of the surrounding villages who want to retain their character. In particular, the lanes around Mayford would seem unsuited to new development.

**Officer Response:**

Support for the proposal is noted.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail how the Council first assessed the capacity of the urban area (and brownfield sites) to accommodate the housing requirement of the Borough, and then identified land in the Green Belt – see Section 1.

The Paper also addresses the issue of new development affecting the character of local areas where the original sites were proposed – see Section 23, and Sections F, Q and V which specifically refer to impacts on Mayford (including impacts on transport infrastructure in Mayford).

**Summary of representation:**

General in principle support for development in Woking, especially in Woking town centre.

There is a huge demand for housing in the area, including social and affordable housing. However objects to the loss of woodland and biodiversity. Many of the sites identified include the loss of woodlands and habitats.

These areas should be protected to keep a clear boundary, separate and identity away from the urban sprawl of London.

Has some sympathy for building on fields or farmland, such as Brookwood farm, as long as effort is made to maintain the trees and habitats in the area.

Preference would be to build up with more tall buildings such as Victoria square which allow a greater density of people without affecting nature. Would recommend any development in the town centre is limited to a minimum of 4 storeys, to maximise the land.

Especially object to the land around Martyrs Lane being used for housing because there are plenty of other suitable sites to develop first, and to destroy a woodland area for more low density housing isn't the solution.

The infrastructure of the area needs to be improved. Woking is disconnected from the primary road network and most main roads are single carriageways. They are often congested.

Suggests a bypass from Goldsworth Park to the A319 near Lightwater/Gordons School to improve the route from Woking to the M3. Routes to the A3 and M25 could also be improved by building more roads and widening existing ones. Although not a borough council matter it is required. Woking Train Station also needs to be improved, with extra platforms added, to improve capacity not only here but on the entire South West network. Objects to a rail overpass avoiding the town.

Supports the land to the east of Martyrs Lane being used for McLaren to extend their business activities as large companies such as them should be a priority to attract other large companies to the town.

**Officer Response:**

Support for the Martyrs Lane site for McLaren operations is noted.

The draft Site Allocations DPD, published in 2015, identified 75 sites for both development and public open space across the Borough. As set out in the document the majority of the sites

identified for development are located in Woking town centre as it offers the best accessibility to existing services and facilities. This approach is supported by the Woking Core Strategy, in particular Policy CS1: A spatial strategy for Woking Borough and Policy CS2: Woking Town Centre. Nevertheless it is important to note that the town centre is unlikely to deliver the mix of housing that is needed within the borough, in particular family sized housing. The specific housing mix required in the borough is set out in the Strategic Housing Market Assessment as well as Core Strategy Policy CS11: Housing mix.

Regarding the representation on woodlands, the Council is aware of the existing designated Ancient Woodland towards the northern end of the Martyrs Lane site. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. Any surveys of the site, undertaken at the development management stage, will make sure that important trees and other environmental and amenity features of significance are fully assessed and protected from development, where necessary.

The representation on wildlife and habitats has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

The representation on urban sprawl and road infrastructure and congestion has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA.

During the preparation of the Site Allocations DPD, the Council considered about 125 alternative sites as part of the site selection process. The full list of sites can be found within the Sustainability Appraisal (SA). The SA is objective-led and has provided a consistent basis for describing, analysing and comparing the sustainability effects of the various options and the specific proposals of the Site Allocations DPD. It also sets out why sites have either been selected or rejected. More information on this process as well as the Council's assessment of brownfield sites is set out in the Regulation 18 consultation Issues and Matters Topic Paper.

As set out in the draft Site Allocations DPD, the Council is seeking to allocate Woking Train Station for essential infrastructure improvements (see site UA23). This includes a separated railway flyover to increase capacity on the rail network. This proposal is not anticipated to reduce the number of trains stopping at Woking Station. The Council is committed to working with the railway operator and Network Rail in delivering these improvements.

**Contributor Reference:** 02674/1/001

**Customer Name:** Mrs A Dicker

**Summary of representation:**

Objects for the following reasons:

- removal of Green Belt is so sad, and how it effects wildlife;
- roads are getting more and more congested, especially with motorway so near. Traffic will become worse, particularly with Longcross and Fair Oaks proposals nearby;
- lack of services - would need another hospital, doctors, schools, local shops;
- main piping and drainage cannot take any more pressure as they haven't been renewed since they were first laid, which will lead to flooding.

**Officer Response:**

Objection is noted and will weigh in the balance of considerations by Members.

The main issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including impacts on the Green Belt and its wildlife; traffic implications of the proposal; infrastructure and service provision; and impacts on flood risk.

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00566/1/001  
**Customer Name:** Ms Barbara Baty

**Summary of representation:**

The site is not in close proximity to local services and transport so development would require costly infrastructure such as schools, shops and medical services. By spreading housing across several parts of the Borough, existing services could be used and this would spread the load on transport and other infrastructure.

The possible development at Fair Oaks is in close proximity and would increase urbanization of the green landscape.

The land around Martyrs Lane floods frequently and development would increase surface runoff and flooding.

There are areas of woodland within the site and contain a range of wildlife, that are protected species. These sites should be protected not developed.

Traffic is already a major problem in the area as is rat running on residential roads. Heavy traffic on the A320 has led to sinkholes because of the underlying soil structure. Development at this scale would overload these important access roads.

**Officer Response:**

The comments set out in the representation have been noted. The Council has addressed these specific issues individually in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. This includes infrastructure provision, roads and congestion, urban sprawl, flooding, wildlife, woodlands and sinkholes.

**Contributor Reference:** 00550/1/001  
**Customer Name:** Mr Daniel Berry

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

**Officer Response:**

Support noted

**Contributor Reference:** 00045/2/001  
**Customer Name:** Mr David Thorne

**Summary of representation:**

Support the objections made by the Mayford Village Society against development in Mayford. The arguments against development in Mayford remain unchanged.

**Officer Response:**

Objection to development in Mayford is noted. The Council has previously addressed the representation made by the Mayford Village Society in respect of the Regulation 18 consultation. This can be found on the Council's website. A number of the issues raised in the Mayford Village Society response has also been addressed in the Issues and Matters Topic Paper, which is also available on the Council's website.

**Contributor Reference:** 00553/1/001

**Customer Name:** Mr Terry Daly

**Summary of representation:**

Support the proposal to safeguard land at Martyrs Lane for future development needs.

The site has previous development and is more easily accessed by major roads.

The Pyrford Green Belt offers substantial views towards the Surrey Hills and is used for recreational purposes.

The long term future of the Green Belt outweighs the loss of the New Zealand Golf Course. Existing members could use the wide range of other golf courses locally.

**Officer Response:**

Support for the site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027);
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. This is a decision the Council will take when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any

development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the Pyrford sites as set out in the representation are noted and will weigh in the balance of considerations by Members. It should be noted however that points raised in the representation regarding the two Pyrford sites have already been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper which is on the Council's website.

Whilst there are a number of other golf courses located within Woking Borough, any proposed development of the site would be required to be in general conformity with the Development Plan for the area and this would be taken into account at the Development Management stage.

The purpose of the consultation is to ensure that the proposed allocations and or any other preferred alternatives are the most sustainable when compared against other reasonable alternatives.

**Customer Name:** Mr Graham Marshall

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

**Officer Response:**

Support noted

**Contributor Reference:** 00560/1/001  
**Customer Name:** Ms Denise Harding

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD and objects to using the sites proposed in Pyrford.

**Officer Response:**

Support for the Martyrs Lane site and objection to the Pyrford sites is noted.

**Contributor Reference:** 00446/2/001  
**Customer Name:** Mr Steve Messenger

**Summary of representation:**

The northern section of the site owned by McLaren could be used for housing and would be sustainable.

The site area set out in the consultation document is too large for the road infrastructure to cope with and would have a significant impact on the local environment and inappropriate given the already large development of Sheerwater.

**Officer Response:**

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- Woodham Court (SHLAAHEW006);
- Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Nevertheless the Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The representation relating to road infrastructure has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. In addition, any environmental implications will be fully assessed as part of the development management process and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid

unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The Sheerwater regeneration scheme has been granted planning permission for a comprehensive redevelopment of the site. The full impacts of the proposals, including those on the natural environment, the road network and social and community infrastructure were fully assessed at the Development Management stage when the application was being determined. If the Council safeguards the land to the east of Martyrs Lane for future development needs then it would also be required to assess the impacts of development and set out mitigation measures if required.

**Contributor Reference:** 00567/1/001  
**Customer Name:** Mr Michael Bennett

**Summary of representation:**

The Martyrs Lane site is an ideal location for safeguarding with good transport links and open space.

**Officer Response:**

Support for the Martyrs Lane site and the merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on open space, to ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS17: Open space, green infrastructure, sport and recreation, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

**Contributor Reference:** 00568/1/001  
**Customer Name:** Mrs Susan Chester

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

The Pyrford sites are used for recreation purposes and is rich in wildlife.

The land has been farmed for many years and should be preserved.

Development in Pyrford would result in a large housing estate with poor infrastructure and the village heritage would be lost.

The Martyrs Lane site is close to a main road, not used for recreational purposes and not in an attractive area.

**Officer Response:**

Support and the merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The representation regarding the merits of the two sites in Pyrford is noted. The Council has previously responded to these comments during the Regulation 18 consultation. The Council's response can be found in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that these particular sites are of low soil quality.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It would be incorrect to imply that the Martyrs Lane site is not used for recreational purposes. The site currently contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. Sport England has been consulted as part of the consultation process and their comments will be considered by the Council when making a decision on its preferred approach to safeguarding.

Regarding landscape quality, the Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt. Both documents are available to view on the Council's website.

**Contributor Reference:** 00583/1/001  
**Customer Name:** Ms Zoe Newman

**Summary of representation:**

Development would cause further congestion on the A320 to the M25. It is also the main route to St Peters Hospital and congestion at this scale would impact ambulance response times and time taken for them to get to A and E.

**Officer Response:**

This representation regarding the existing road network and congestion has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

In addition, the Council is seeking to work with the Clinical Commission Groups and other healthcare providers to see how well provision could be aligned to proposed developments to avoid unacceptable standards of provision in the area.

**Contributor Reference:** 00563/1/001  
**Customer Name:** Ms Joan Ashley

**Summary of representation:**

Part of the site has been granted planning permission in the past and there is considered suitable for development.

The site has excellent road links to the M25 and Heathrow Airport as well as Woking and Guildford where there are mainline train stations.

The site is large enough to accommodate new social and community infrastructure unlike the other six sites which would stretch existing infrastructure.

A larger site would mean more affordable housing which is needed in the Borough and provide specialist residential accommodation.

There are good employment possibilities in the area.

The site has no local or national landscape designation other than Green Belt.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is correct that a part of the site has been previously granted planning permission for a car production facility associated with McLaren Technologies. The merits of that particular employment proposal were considered at the time and deemed to meet the tests of very special circumstances for development in the Green Belt. McLaren have made representations to this consultation to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Nevertheless the Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the

Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding the representation on the existing road infrastructure, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

There appears to be no clear advantage between this site and the other six sites identified in the draft Site Allocations DPD in relation to proximity to Guildford and Guildford Station.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Whilst any of the proposed safeguarded sites could accommodate specialist residential accommodation, this would only be considered during a review of the Core Strategy and or Site Allocations DPD.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The representation regarding landscape designation is noted and taken into account. The Peter Brett report (Green Belt Boundary Review) however does not recommend that the Martyrs Lane site is allocated for development. It reaches this conclusion after acknowledging the references made in the representation. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

**Contributor Reference:** 00565/1/001  
**Customer Name:** Mrs Jenny Velati

**Summary of representation:**

Objected to the development of the Hoe Valley School on Egley Road, particularly to the sports facilities on Green Belt land. This will have significant traffic implications for this part of the Borough.

Additional housing on Saunders Lane will be out of keeping with the local character and also have a negative impact on the road network as most residents have at least 2 cars.

Ten Acre Farm is already in close proximity to the Traveller site on Burdenshott Road and therefore there is no need for an additional site so close by.

Objects to the principle of Green Belt development and priority should be given to brownfield sites. Nevertheless Martyrs Lane is more appropriate given the location and size of the land as well as the extra facilities that have been suggested.

**Officer Response:**

The representation regarding the sites on Egley Road, Ten Acre Farm and Saunders Lane, identified in the draft Site Allocations DPD is noted. These have been addressed previously by the Council and the response can be found in the Regulation 18 consultation Issues and Matters Topic Paper. This is available on the Council's website.

In addition, the above report sets out the Council's reasoning for identifying land within the Green Belt to meet development needs, both during this plan period and for future development needs between 2027 and 2040. It also sets out the Council's approach to assessing existing brownfield land in the Borough and the evidence base documents that support the Council's policies.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Whilst it is correct that the Martyrs Lane site is of a significant size, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs.

Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding the representation on extra facilities, the Martyrs Lane consultation is to the possibility of substituting it for the six sites identified in the Regulation 18 Site Allocations DPD and that the site could deliver at least 1,200 net additional homes and the necessary green and other infrastructure to support the potential development of the site. For information, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 00552/1/001  
**Customer Name:** Mr Richard Sharp

**Summary of representation:**

All green belt land is important.

The existing infrastructure, including roads, hospitals, doctors surgeries, schools are at capacity.

Because of all the planning possibilities, we will move away from the area soon.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper'.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Summary of representation:**

Objects to the proposal of 1200 homes in Martyrs Lane. The development is far too large for the area and the increase number of cars would put a strain on the local roads.

**Officer Response:**

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00511/1/001

**Customer Name:** Mr Dan Cefai

**Summary of representation:**

Supports a logical approach of a number of smaller sites spread across different locations in the area as opposed to one large development east of Martyrs Lane. This allows for a variety of locations and house types whereas building on one site poses the risk of a housing estate with no character.

The site is unsustainable with increased pressure placed on the road network, schools, GP etc.

**Officer Response:**

Support for a dispersed approach as oppose to one single site is noted.

It is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

With regards to comments about the sustainability of the site with increased pressure on infrastructure, these issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 00515/1/001  
**Customer Name:** Mr Robert Rider

**Summary of representation:**

Objects to development of the Martyrs lane site on the grounds of lack of infrastructure.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 00529/1/001  
**Customer Name:** Mr Paul Parsons

**Summary of representation:**

Supports development here because it is brownfield rather than greenfield which is considered far more suitable for development.

The road infrastructure in this area is better, an increase in road traffic will be much less damaging to existing local residents.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

**Customer Name:** Thomas Roberts Westminster Limited

**Summary of representation:**

The landowner of the site supports the proposed new strategy of substituting the previously proposed six safeguarded sites outlined in the draft Site Allocations Development Plan Document (DPD) with land to the east of Martyrs Lane as the preferred strategic 'safeguarded site' to meet the long term future housing development needs of the Borough between 2027 and 2040.

The site however is also currently identified under three separate policies (Policies WD1, WD2 and WD5) of the adopted Surrey Waste Plan (2008) as being suitable to accommodate waste management use.

**Officer Response:**

The Council notes the landowners support for the proposal to allocate the land to be safeguarded for future development needs. The Council also notes that the site is currently safeguarded in the Surrey Waste Plan (2008) and will continue to liaise with the Waste Authority on this matter if the Council decides that this site is its preferred safeguarded approach.

**Summary of representation:**

Reasons for safeguarding Martyrs Lane instead of Upshot Lane fields:

The Pyrford sites are part of the heritage features of the area which includes conservation areas, ancient footpaths and listed assets. The two fields in Pyrford are integral to the heritage setting of the area.

The sites are protected by Policy CS24: escarpment and rising ground of landscape importance.

The sites have been farmed for centuries and include good quality agricultural land. These play an important contribution to the rural character of the area and gateway into the town. Loss of these 2 fields would make the remaining area of Ladyplace Farm less viable.

**Officer Response:**

The Council notes the representation outlining reasons against safeguarding land for future development needs in other areas of the Borough. This will be taken into account to inform the preferred approach to safeguarding.

The matters relating to heritage, landscape and local character have been addressed in Officers' Response to the Regulation 18 Site Allocations DPD consultation.

In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA. Whilst the site identified as GB13 in the draft Site Allocations DPD is adjacent to Lady Place Farm, it is not clear from the representation how the safeguarding of these two sites for future development needs will have an adverse impact on the viability of the farm.

**Contributor Reference:** 00528/1/001  
**Customer Name:** Mr Matt Lothian

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

Some of the site is previously developed land unlike the other proposed sites.

The A245 through West Byfleet and over the M25 has no capacity left, especially when other new development in the area is taken into account.

One site would result in economies of scale and help to find solutions to the infrastructure concerns.

Green Belt land in Pyrford is accessible and used for recreational purposes.

The Pyrford sites are an integral part of the heritage setting of the area which includes listed assets, conservation areas and ancient footpaths.

The Pyrford sites have been farmed for centuries and include good quality agricultural land. They make an important contribution to the rural character of the area and gateway into the town.

All Green Belt land should be protected but if needed for future development needs, then the Martyrs Lane site is the better option.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is

submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the land east of Martyrs Lane regarding economies of scale as set out in the representation are noted and will weigh in the balance of considerations by Members. Nevertheless to ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding.

The matters relating to heritage, local character and amenity have been addressed in Officers' Response to the Regulation 18 Site Allocations DPD consultation.

In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

**Contributor Reference:** 00541/1/001  
**Customer Name:** Mr Richard Crowther

**Summary of representation:**

Whilst the Martyrs Lane site is on Green Belt land, it is in part previously developed land, which makes it more suitable than the other proposed sites.

The Martyrs Lane site is closer to Woking Town Centre and conveniently located next to substantial road infrastructure and main transport links, with good road connections to Woking and the M25. There will be a less damaging affect on the feel of the area.

In contrasts the road network around Pyrford and West Byfleet are already heavily congested and poorly connected.

Land at Martyrs Lane is relatively unused by the local public (except the recycling facility- which has little amenity value). Appropriate and considerate construction should allow the development to be sensitively located within the wooded area.

Martyrs Lane is in a sustainable location, close to major employers.

The benefits of Martyrs Lane site are considered greater than the benefits than the other proposed sites including proximity of Woking, better transport links, part 'brownfield' redevelopment, and has a lesser impact on the character of the borough.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);

- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Summary of representation:**

Object to the proposal.

The site adjoins the Thames Basin Heaths Special Protect Area (SPA), which is accorded the uppermost environmental protection under European Union Directive. The SPA provides habitats for Dartford Warbler, Nightjar and Woodlark which are protected species of international significance. Policy NRM6 of the South East Plan emphasises that new residential development which is likely to have significant effect on the ecological integrity of Thames Basin Heaths Special Protection Area will be required to demonstrate that adequate measures are put in place to avoid or mitigate any potential adverse effects. Such measures must be agreed with Natural England. Priority should be given to directing development to those areas where potential adverse effects can be avoided without the need for mitigation measures.

Natural England has demonstrated that development within 5 km from the SPA could potentially have a harmful effect on the SPA, and are therefore required to provide SANGs to mitigate the harm. HCPS however takes the view that a development of the size and magnitude as proposed at Martyrs Lane when assessed with other proposed housing developments in the locality, could not possibly receive protection from harm by mitigation measures alone. It is obvious that a large housing development just outside the 400 metre exclusion zone from the SPA will attract visitors to the SPA, regardless of there being a SANG included within the development scheme. A survey commissioned by Natural England demonstrates that the proximity of development to the SPA has adverse effects on its integrity.

HCPS owes part of the land east of Martyrs Lane and will not make it available for safeguarding by the Council. Given the land in its ownership is common land, disposing it or developing it will require an application for de-registration under s.16 of the Common Act 2006, where only the landowner can submit the application to deregister.

**Officer Response:**

The Council accepts and has always acknowledged that the SPA should be accorded the uppermost environmental protection under the European Union Directive. The importance of the SPA is within the hierarchy of environmental designations is acknowledged in Policy CS7: Biodiversity and nature conservation of the Core Strategy. Policy CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy is a specifically crafted policy to avoid harm to the SPA as a result of development. The policy mirrors and is in general conformity with the requirements of Policy NRM6 of the South East Plan. The policy takes a precautionary approach to the protection and conservation of the SPA and development will only be permitted where the Council is satisfied that this will not give rise to a significant adverse effects upon the integrity of the SPA.

The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided adequate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the site. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. The Council is aware of surveys carried out about the locational relationship between development and the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will always learn lessons from similar existing sites and work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England submitted a representation in response to the consultation. It does not have any objection in principle to the safeguarding of the site. It notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed.

The Council has prepared a land ownership map of the land east of Martyrs Lane and is aware of the part of the land in the ownership of HCPS. It is not intended that this part of the site will be developed. It is included to ensure the defensible boundary of the Green Belt. To put it into context, the land in the ownership of HCPS is about 1.42 hectares (approximately 1.3% of the entire land). Most of the land is either Common Land, in Flood Zones 2 and 3 or within the SPA. The consultation document makes it clear that these areas will not form part of the developable area. The unwillingness of HCPS to make the land available would therefore not compromise the delivery of the site to meet the Council's overall objectives. Consequently, it

would not be necessary to make an application for the deregulation of the land as Common Land under s.16 of the Common Act 2006.

**Customer Name:** Mr Victor Blanchard

**Summary of representation:**

The roads (mainly access to the M25, and the M25 itself) and the infrastructure (hospitals, GP surgeries, schools) are already far too busy and under pressure already to allow such a major housing development in this area. The A320 – the busiest road in Surrey – which is a major access route to the M25 – would not have capacity for such a scale of housing. The infrastructure would need major improvements. Not confident that infrastructure work is satisfactory judging by the state of the roads in the whole area, the waiting time in St Peters Hospital or the ability to get an appointment at local GP on the day.

The current water work done on the A320 for more than a year is concerning and the road is now patchy and has been re-done in a very poor quality. It could have been a good opportunity to widen that axis and improve it. Another proof that the council and the country in general does not consider infrastructure as a high priority.

Infrastructure provision is a major problem in the UK in general, especially when compared to European neighbours.

**Officer Response:**

The potential traffic impacts of the proposal are described in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. The A320 has been identified as a potential traffic hotspot which would be exacerbated by new development on land to the east of Martyrs Lane. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The Topic Paper also addresses the issue of infrastructure provision, and sets out how development at this site would be supported by necessary social, physical and green infrastructure in order to be sustainable.

**Summary of representation:**

Having reviewed and noted both the positive (e.g. a single site big enough to meet the housing requirement) and negative (e.g. still involves loss of green belt) findings in the WBC Sustainability Appraisal applicable to the East of Martyrs Lane site, on balance sees the opportunity, albeit in the longer term, for development of a new neighbourhood centre, as the factor that leads to support of the potential substitution. Understands that the number of houses has to grow to a sufficient number to make such a neighbourhood centre viable but suggests the council should ensure that this part of any plan from the outset.

**Officer Response:**

The merits of the proposal as expressed in the representation are noted and will weigh up in the balance of considerations by Members.

It should be noted that there are also opportunities for improved or new infrastructure provision in the originally proposed six allocated sites. A new Neighbourhood Centre may not be viable, but it might be possible to provide new/improved local infrastructure improvements, such as green spaces and play areas.

If the land to the east of Martyrs Lane were allocated for development, the Council would consider making it a key requirement that a new Neighbourhood Centre (or new local facilities and services) were provided as part of any development coming forward.

**Customer Name:** Ms Marilyn Higham

**Summary of representation:**

Objects primarily due to the added congestion and pollution in and around the A320 and A245 but also due to the lack of biodiversity and loss of habitat for the wildlife in this area.

Birds and insects would no longer have places to feed, nest or shelter. This would not only be affecting the actual area to be developed by way of loss of mixed woodland, mature tree belts, hedgerows and even ancient woodland, but would also have a negative impact on the nearby Horsell Common. Horsell Common is an SPA and is already used to the limits of its capabilities. The main carpark is always full, there is a problem with dog fouling and rubbish littering due to the high number of dog walkers and other sections of the community who use it, so it would not be able to cope with any extra pressures.

Both the A320 and the A245 roads are already at saturation point as evidenced by the current road works along the A320 which has produced huge tailbacks as well as drivers taken avoiding action so that the surrounding roads are jammed too. Any extra traffic generated by this development would be catastrophic for current road users, for the environment and for the air quality breathed by the population in general as well as for the economy with the time lost in traffic jams. Air quality in this area is already a problem with the two main roads – which are adjacent to the proposed site – being extremely congested on a regular basis. This would worsen if the development were to go ahead, especially as the increased car use would be inevitable and extremely high as there are no local schools, shops, health centres or any other essential amenities within a reasonable walking distance. The bus services are totally inadequate along these roads, so they would be no help to anyone.

The proposed site is part of the Green Belt and has a semi-rural aspect and this development would merely add to the creeping urbanisation in the area. There would be a fragmentation, if not complete destruction, of habitat for the wildlife. In addition, the surrounding population would have a loss of enjoyment of the current woodland and pleasant rural aspect which is known to affect one's sense of well-being.

The increase in population would lead to an increase in the amount of rubbish produced and the inevitable littering as well as increased dog fouling and more importantly the cat population would increase exponentially, which is a huge problem for any birds which may possibly remain, due to cat predation.

There is also the question of the flooding risk and also the inevitable surface water run-off. Trees are crucial to minimise the risk of flooding, so the problem would be exacerbated by the loss of so many trees and the construction of so many houses. Water demand is already high and stretches the supplies at various times in the summer in this area.

All of the above would apply once the development has been completed but there would also be extra disturbance, noise and air pollution, traffic congestion and a subsequent impairment to the quality of life whilst the construction was underway.

**Officer Response:**

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the issues raised in each representation in detail, including: the impact of the proposed development on traffic in around the A320 and A245; public transport infrastructure; environmental impacts, such as on biodiversity and designated nature sites (e.g. Horsell Common); assessment of Green Belt quality and outcome of studies on Green Belt impacts; and impacts of development on flooding, including surface water run-off.

It should be noted that environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have been consulted and their representations, and the Council's response, can be accessed for more information.

At the time of writing, air quality in Woking Borough is generally good, and assessments are frequently carried out by the Council. The area around land to the east of Martyrs Lane and surrounding roads have not been identified as having low air quality. The Council has also adopted a Development Management Policies DPD which contains a policy on air and water quality (DM6), which requires large developments to submit an Air Quality Assessment identifying the change in air quality that will result from the proposed development, and an appropriate scheme of mitigation if necessary, in order to be supported for planning permission.

It should also be noted that although the Sustainability Appraisal assessed the identified land as being beyond walking distance to local facilities, resulting in an increased need to travel by car, there is scope for a development of this scale to provide on-site infrastructure to support any development coming forward. Access by bus or bicycle to the Town Centre was also assessed to be good, and any development coming forward at the site could contribute towards the improvement of this infrastructure.

**Customer Name:** Mr Ian Arden

**Summary of representation:**

This 112 hectare site provides an opportunity to meet the need for 1200 units, including affordable housing and traveller site within a discrete locality. Such a site will enable for the more efficient provision of both social, service, and transport infrastructure.

The site is in close proximity to the A320 north of Woking, thus providing easy access to the M25 and access to the rail and bus services to the south with minimal impact on Woking towns centre.

The site is in close proximity to major employers of the area including St Peter's Hospital, the Animal and Plant Health Agency, McLaren Technology Centre and the Brooklands Retail Park. The development of such a large site provides the opportunity to develop a truly integrated community with the provision of Affordable Housing (CS12), Specialist Residential Accommodation (CS13) and Provision of Travellers (CS14) all on one site. This would enable the local authority to meet its targets for development, whilst removing a number of isolated development sites that are not integrated into the community such as Ten Acre Farm, Mayford. The size of this site means that the local authority has the capability to further develop the site to meet local needs in the 2027–2040 Development Plan

The majority of the site is outside of flood risk areas with the majority of natural fluvial flow being away from main areas of development.

Elements of the proposed site have already been granted planning permission for alternative uses, so the site can be considered as suitable for development . The development requirements for this sites can be integrated into the Sheerwater redevelopment plan, which lies to the east/south east of the site.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

In terms of flooding, given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Ms Alexandra Harris

**Summary of representation:**

It is not considered there is adequate transport infrastructure for this development. The roads are congested and there are several developments on our door step and in close proximity such as Martyrs Lane, Fair Oaks, Brox Lane, Aviator Park and Longcross. The A319, A320, M25, A3 and M3 are busy roads and the area is gridlocked due to accidents on these motorways.

The area of Woking and Runneymede is highly populated with inadequate facilities such as hospitals, schools, elderly care facilities etc. The size of development proposed is far too large for the existing surroundings to cope with.

Surrey is often portrayed as being a very green county with lots of countryside for residents to enjoy. The Green Belt was designed for a reason – to keep areas green and protect wildlife and residents from towns spreading and merging into each other. Removing areas from the Green Belt removes the identity of Surrey and will destroy the environment.

**Officer Response:**

In terms of infrastructure, hospitals, schools, elderly care facilities etc, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments such as Brox Lane, Aviator Park and in particular Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

In terms of transport and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of protection of the Green Belt. The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the

Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt. It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development.

Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Customer Name:** Ms Clare Brown

**Summary of representation:**

Green Belt land should be protected and Byfleet Village has a particular need because so little Green Belt land is now available in the village. This is also worse because of the developments planned for Broadoaks and West Hall which will make the Parvis Road unusable. We have enough housing as it is in the village. The traffic is already extremely heavy through the village.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding infrastructure, traffic and Green Belt in Byfleet are also addressed in the topic paper, with particular reference to section 1.0, 3.0, K, L and U.

**Contributor Reference:** 00456/1/001  
**Customer Name:** Mr Andrew Cornwell

**Summary of representation:**

Concerns with the proposals to develop on green belt land in the Byfleet area. There has been large developments of housing in the area over the last 10 years, the amenities have not developed to accommodate the increase in population at the same rate. There is a lack of infrastructure such as traffic congestion, insufficient school places, medical and dental facilities as well as insufficient public transport links to match the increase in population.

The area has seen a decline in green spaces and further building would see that reduce further. The remaining green belt land is predominantly on flood plains which would be unsuitable for development especially considering the area flooded a couple of years ago. Please reconsider the decision to develop our precious green belt land and protect it for future generations.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding infrastructure, flooding, traffic and Green Belt in Byfleet are also addressed in the topic paper, with particular reference to section 1.0, 3.0, 5.0, K, L and U.

**Contributor Reference:** 00464/1/001  
**Customer Name:** Ms Sarah Johns

**Summary of representation:**

Objects to building on the Green Belt.

There is a lack of infrastructure especially the traffic congestions on the roads which are in need of updating. There will not be sufficient school palaces and doctors surgery appointments.

In 2013 over 2,000 Byfleet residents signed a petition to protect the Green Belt in Byfleet.

Byfleet Village is already over developed without suitable community facilities.

Large areas in Byfleet are on the Flood Plain and more development will cause further flooding

Traffic on Parvis Road at a standstill

The developments at Broadoaks and West Hall, which will worsen the congestion.

The Broadoaks site and part of the Martyrs Lane site are on Green Belt land which has already been developed which is not true of the other proposed sites. These previously developed sites and the West Hall site are more than enough to meet the need of housing.

**Officer Response:**

The justification for the release of Green Belt land for development and future development needs has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding flooding, infrastructure and traffic have also been addressed in the 'Regulation 18 Consultation issues and matters topic paper' refer to section 3.0, 5.0, K, L and U for the Council response.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL

contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of school provision, it is not known at this stage which type and nature of provision will be allocated on site. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Infrastructure Delivery Plan notes that at present there is adequate GP provision to meet overall demand in the Borough. Whilst this is the case, it is also accepted that there might be locally specific pressures of over subscription that needs to be addressed. Whilst traditionally health provision reacts to meet projected demand, the Council is seeking to work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Summary of representation:**

This 112 hectare site provides an opportunity to meet the need for 1200 units, including affordable housing and traveller site within a discrete locality. Such a site will enable for the more efficient provision of both social, service, and transport infrastructure.

The site is in close proximity to the A320 north of Woking, thus providing easy access to the M25 and access to the rail and bus services to the south with minimal impact on Woking towns centre.

The site is in close proximity to major employers of the area including St Peter's Hospital, the Animal and Plant Health Agency, McLaren Technology Centre and the Brooklands Retail Park. The development of such a large site provides the opportunity to develop a truly integrated community with the provision of Affordable Housing (CS12), Specialist Residential Accommodation (CS13) and Provision of Travellers (CS14) all on one site. This would enable the local authority to meet its targets for development, whilst removing a number of isolated development sites that are not integrated into the community such as Ten Acre Farm, Mayford. The size of this site means that the local authority has the capability to further develop the site to meet local needs in the 2027–2040 Development Plan.

The majority of the site is outside of flood risk areas with the majority of natural fluvial flow being away from main areas of development.

Elements of the proposed site have already been granted planning permission for alternative uses, so the site can be considered as suitable for development. The development requirements for this sites can be integrated into the Sheerwater redevelopment plan, which lies to the east/south east of the site.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable

Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The potential for the site to provide accommodation for Policy CS13: older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the

Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

In terms of flooding, given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The

Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00424/1/001  
**Customer Name:** Ms Natasha Nilsson

**Summary of representation:**

The existing road infrastructure is already at capacity resulting in congestion and traffic. The roads are not wide enough and widening of the A320 will be required.

Saddened by the thought of tree removal and natural beauty for housing. It will impact the quality of life for residents and is not a sustainable long term solution.

The development of 1200 homes will result in more housing needed in the long term due to growing population needs.

How will St Peters Hospital cope with additional demand. It is already at capacity.

Object to the urbanisation of the land to the east of Martyrs Lane.

**Officer Response:**

The representation regarding the existing road network as well as woodlands and wildlife has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The Council is fully committed to the comprehensive delivery of the Core Strategy which seeks to facilitate the delivery of 4964 dwellings over the plan period. It is also committed to safeguarding land for future development needs between 2027 and 2040 as required by national planning policy. At this stage it would be unreasonable to predict the housing needs of the borough and wider housing market area beyond this, as set out in the representation. Nevertheless the overriding consideration of the Site Allocations DPD is to ensure that the Council identifies the most sustainable sites when compared against all reasonable alternatives. The allocation of any of the safeguarded sites for development as well as future housing requirements will be considered as part of any review of the Site Allocations DPD and or Core Strategy.

As set out in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper, the Council will work with the relevant providers to make sure that infrastructure supports planned development. It should also be noted that the Council is working with the relevant healthcare providers, including the Clinical Commissioning Groups, to identify healthcare provision and distribution to meet future needs.

Objection to the proposal is noted.

**Contributor Reference:** 00418/1/001  
**Customer Name:** Ms Nicola Elliott

**Summary of representation:**

Concerned that 3500 new houses would result in 5000 additional cars in the area. There is no additional road network provision planned and existing traffic congestion is already high.

There is no additional infrastructure to support the proposal and therefore would place a lot of pressure on the existing facilities.

There would be an increased risk of flooding and part of this land is susceptible to subsidence.

The site is connected to a SSSI and is home to a wide range of wildlife which would be destroyed.

Development would also increase pollution generally.

Asks that this site is not allocated for development.

**Officer Response:**

The Martyrs Lane consultation is in respect of the possibility of substituting the Martyrs Lane site for the six safeguarded sites identified previously in the draft Regulation 18 version of the Site Allocations DPD, to meet the long term development needs of the Borough between 2027 and 2040. It is anticipated that the site is sufficient to enable the delivery of at least 1200 net additional homes and the necessary green and other infrastructure to support the potential development of the site. The consultation therefore is not to safeguard the site for 3500 new homes as suggested in the representation.

Based on the above, it is unlikely that safeguarding of this site would result in 5000 additional cars in the area. The Council is fully aware of local resident's concerns regarding the existing traffic congestion in the area. In order to quantify and forecast vehicular trips the Council has carried out a number of studies including a Strategic Transport Assessment. Please refer to the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper for the Council's response to traffic congestion and highways impacts.

The representations regarding infrastructure provision, flooding, the British Geological Survey and wildlife have been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Regarding pollution generated from any proposed development, there are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of

communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

Whilst objection to this proposal is noted, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives.

**Contributor Reference:** 00425/1/001  
**Customer Name:** Mr Benedict Watt

**Summary of representation:**

Development in one area would destroy one of Britain's greatest golf courses and cause huge traffic issues for the A320, A245, M25, M3 and A3. These roads already have serious issues and development would have an adverse impact on these roads and in turn the local economy.

**Officer Response:**

The New Zealand Golf Course has confirmed that the land within its ownership is unavailable for residential development. Nevertheless the Council has Compulsory Purchase Powers which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation. If the golf course is safeguarded for future development needs then it is correct that there will be a loss of this sporting facility. The Council has consulted Sports England and their response will be addressed separately and taken into account.

The representation regarding roads and traffic has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. As set out in the response, the Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. Through identifying and implementing these mitigation measures, it is not considered that development will have an adverse impact on the local economy.

**Contributor Reference:** 00414/1/001  
**Customer Name:** Mr David James

**Summary of representation:**

Support the substitution. Even if only considered suitable in part.

**Officer Response:**

Support noted

**Contributor Reference:** 00421/1/001  
**Customer Name:** Ms Linda Brown

**Summary of representation:**

The sites at Byfleet regularly flood.

Infrastructure in the area is inadequate for additional development, including schools, GPs, dentists, public transport, congested roads (including Parvis Road). The character of Byfleet as a village will be lost.

Questions why there has not been any proposed sites at the Horsell side of Woking to date?

**Officer Response:**

The justification for the release of Green Belt land for development and future development needs has been fully addressed in the 'Regulation 18 Consultation issues and matters topic Paper. The matters regarding infrastructure, flood plains, medical facilities and traffic congestion have also been addressed in the 'Regulation 18 Consultation issues and matters topic paper', please refer to section 1.0, 3.0, 5.0, M and U for the Council's response.

As part of the preparation of the Draft Site Allocations, 125 alternative sites were assessed. This is set out in the Sustainability Appraisal which can be found on the Council website. Based on this and other evidence including the Green Belt Review, the most sustainable sites were put forward for the Draft Site Allocations DPD compared to other reasonable alternatives.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Customer Name:** Mr Richard Grinter

**Summary of representation:**

The representation is appalled by the proposal that will destroy the local area. The Council is already ruining the area by adding large numbers of families to Sheerwater and now you want to compound that further by building on the proposed McLaren Newtown area.

Schools are oversubscribed, there are traffic jams everywhere, it would be a disaster for the local area if you moved forward with this proposal.

**Officer Response:**

The proposed Sheerwater Estate regeneration scheme has been granted planning permission for the comprehensive redevelopment of the site. Any adverse impacts generated as a result of the proposal will have been dealt with at the time the application was being determined. As set out in Core Strategy Policy CS5, Sheerwater and Maybury have been identified as a Priority Place due to the pockets of deprivation within them. The proposed regeneration scheme is anticipated to address a number of these issues to create a sustainable community and bring about a positive change in these areas.

The representation regarding traffic has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to determine measures of mitigation needed to support the development, and how they could be delivered in order for development to be considered acceptable.

**Customer Name:** P D Robbins

### **Summary of representation:**

Objects to the proposal as follows:

– Green Belt: the Green Belt boundary review concluded that the land had very low/low suitability for release from the Green Belt, and recommended the originally proposed sites. It would be a significant incursion on the Green Belt. This was professional, independent advice. The sudden inclusion of land to the east of Martyrs Lane has been fostered by Councillors from Wards threatened with development – the professional approach has been high jacked; we now have a political auction. The current boundary of the Green Belt to the north of Woking's conurbation is one that can be well defended. Any development to the north of the A245 could open the floodgates to extending the urban area. It would also reduce distance to Ottershaw, risking merging between towns.

– Environment: the land is part of an important green corridor which enhances species diversity and movement running down River Bourne easterly towards London. Development here would prejudice this corridor. It is adjacent to Horsell Common SPA and SSSI. This SPA is already one of the heaviest used parts of the Thames Basin Heaths. Additional walkers and dogs would use the Common, which would threaten protected Nightjars and Dartford Warblers. A SANG will not stop new residents freely crossing the A320 with their dogs to use the Common, although it might deter domestic cats. The Woking Habitats Regulation Assessment is speculative on air quality in that it suggests NOx pollution on the Heath will reduce over the next ten years.

Although largely unaffected by flooding, the flood zone will need amending when the effect of run-off from the development is considered. There is no research available about the quality of the land for farming or for large-scale building operations. Nor has there been a proper wildlife survey. Although these would be required for a future planning application, these surveys should be conducted before such a major planning policy is approved.

– Sustainability: the site performs badly regarding access to Woking and railway stations by sustainable modes; congestion would therefore increase on the A320 or A245 which are already busy. Too distant for walking. The proposed estate would be distinctly separate from Woodham due to a very busy road. Would not be suitable for affordable housing because of its position. Unsustainable position for local sports facilities. Inconvenient to access secondary schools, medical facilities, retail shops and other services. Development might result in loss of Civic Amenity Site which is an important service for this side of the town, which would be costly to move. Ancient woodland would be lost. Very speculative to suggest residents on the site might work for major local employers.

– Deliverability: there is a reasonable prospect the originally proposed sites can be delivered. This isn't the case at Martyrs Lane due to the golf club nor McLaren making their land available. The site contains an area of Registered Common Lane adjacent to the McLarens roundabout so there is little prospect of the site having access onto that roundabout. Any alternative access will involve costly and tricky highway changes – unlikely to be borne by developers.

- Fair Oaks: the potential cumulative impact of this Garden Village proposal on the Common and SPA must be assessed before this allocation can be considered.
- Policy NRM6: this retained South East Regional Plan policy specifically states that priority should be given to directing development to those areas where adverse effects on the SPA can be avoided. The originally proposed sites should therefore be preferred.

**Officer Response:**

Objection is noted and the points raised in the representation will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the concerns raised in detail, including:

- conclusions from the Green Belt boundary review and Landscape assessment into contribution of the land towards Green Belt purposes such as urban sprawl and towns merging;
- the perceived bias and political motivation of the proposal;
- the environmental concerns about the site regarding wildlife and loss of ancient woodland, and how it is recognised that a detailed ecological assessment is required;
- how development of the site would not compromise the Thames Basin Heaths SPA and how it would comply with policy NRM6;
- the risk of flooding and exacerbation of flood risk elsewhere;
- the sustainability of developing the site, including availability of public transport infrastructure and provision of other infrastructure services such as schools and health facilities;
- the traffic implications of the proposal on the A320 and A245;
- the impact on the recycling centre;
- the availability of the land for development, and deliverability.

In addition, the Council has received a representation from Natural England and Horsell Common Preservation Society regarding the Thames Basin Heaths SPA and has responded accordingly. The responses are available to view for further information. In summary, the Council does not accept that the development of the site would compromise the overall integrity of the nearby Thames Basin Heaths SPA and its ecological integrity and the ecology of the wider area. The site can be developed to comply with the requirements of Policies NRM6 of the South East Plan and CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy. Natural England does not have any objection in principle to the proposal, subject to the appropriate measures of mitigation being agreed. This matter has been addressed in detail in the Officer's response to the other representations made by Horsell Common Preservation Society. There is no proven functional linkage between the SPA and the site, which is of such significance to prevent the development of the site.

Regarding the representation on air quality: there is no declared air quality management area in the vicinity of the Martyrs Lane site. The Council has robust policies to manage air quality impacts as a result of development, such as Policy DM6: Air and Water Quality, of the

Development Management Policies DPD. This, and other policies, would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

The quality of the land within the site has been assessed as part of the Green Belt boundary review and the Landscape assessment by Hankinson Duckett. As referred to in the Topic Paper, the studies conclude that the land is inappropriate for release from the Green Belt. The land has also been assessed by DEFRA regarding its agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is incorrect to assume that the site would not deliver affordable housing. The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance, which includes the Fair Oaks Garden Village proposal. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. Should the land be safeguarded for development, the Council will continue to work with neighbouring boroughs and statutory consultees such as Natural England to determine the mitigation measures required to address any cumulative impacts on Horsell Common and the Thames Basin Heaths SPA. This work would take place during the Site Allocations DPD preparation process, as well as during the Development Management stages, under the Duty to Cooperate obligations. Land will only be released for development upon a future review of the Core Strategy and/or the Site Allocations DPD, at which point it is likely that the key requirements of a safeguarded site would set out various criteria that development proposals must meet in order to be supported, including mitigation measures to preserve the integrity of the SPA.

If developed, it is anticipated that the site would accommodate at least 1,200 dwellings which would make a significant contribution towards meeting the Borough's future housing needs.

**Contributor Reference:** 00404/2/001  
**Customer Name:** Ms Colette Grace

**Summary of representation:**

Development here would not be sustainable, there are already problems with infrastructure including roads, congestion, flooding.

The rural character of the area would be ruined, with the loss of woodlands.

The quality of life for new residents would be poor living close to the tip.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

The social and environmental implications of the recycling centre will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

In addition, development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 00405/2/001  
**Customer Name:** Mr Chris Grace

**Summary of representation:**

The existing road network is gridlocked particularly when roadworks are taking place.

The existing local infrastructure can not cope including healthcare facilities where it is difficult to get an appointment in an acceptable time frame.

**Officer Response:**

The representation regarding the existing traffic conditions within the local area has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. As noted within the transport assessments that have informed the Site Allocations DPD, the studies consider normal traffic movements and patterns on the local road network. These studies do not take into account temporary diversions as a result of roadworks and road closures as they do not represent normal or usual traffic conditions or movements. Further information setting out the methodology for the studies is set out in the relevant evidence base documents.

The Council's Infrastructure Delivery Plan notes that at present there is adequate GP provision to meet overall demand in the Borough. Whilst this is the case, it is also accepted that there might be locally specific pressures of over subscription that needs to be addressed. Whilst traditionally health provision reacts to meet projected demand, the Council is seeking to work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

Additional information regarding infrastructure provision to support development has been set out in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

It will ruin the fabric of our society and devalue our homes and quality of life.

**Officer Response:**

The Council's response to the representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail how the allocation of sites to meet the housing need for the Borough will not undermine the overall social fabric of the area.

Whilst the value of land and property is not a material planning consideration, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 02684/1/001

**Customer Name:** J R Vachs

**Summary of representation:**

Objects to proposal due to huge impact on an area which has already seen changes.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

**Customer Name:** Mr And Mrs Margaret And Maldwyn John

**Summary of representation:**

Supportive of the proposal: an opportunity to construct appropriate infrastructure with development coming forward – particularly drainage. The separate development of the six safeguarded sites will probably lead to overload of the existing services in some if not all of these sites. The scale of housing allows for provision of community facilities such as at Parkview – perhaps even a school and a surgery.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. The Council will make sure that the development of any land that is safeguarded is supported by adequate and necessary infrastructure. This will be the case whether it is a single site or multiple sites. The Council has adopted the Community Infrastructure Levy as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site – whether it at Martyrs Lane or the originally proposed sites.

**Contributor Reference:** 00387/1/001  
**Customer Name:** Mr Martyn Drake

**Summary of representation:**

Building on one site rather than six would minimise disruption to the surrounding area during construction. Martyrs Lane site could be landscaped to better suit the area rather than filling in small areas of housing across multiple sites.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

It should be noted that the allocated sites would be safeguarded to meet development needs between 2027 and 2040. It is highly unlikely that all six sites would be developed concurrently during this time: safeguarded land would be released gradually as and when required, and therefore construction impacts across each of the six originally proposed sites would be dispersed.

In terms of landscaping, all proposals for development would need to meet policy requirements set out in the Development Plan at the time that the safeguarded land is released; which is likely to include a policy on design to ensure the development incorporates landscaping that enhances the setting of the development, irrespective of whether it is one large site or multiple sites.

**Contributor Reference:** 00374/1/001  
**Customer Name:** Ms Alison Kirby

**Summary of representation:**

Supportive of the proposal as it would render sites GB12 and GB13 in Pyrford unnecessary for allocation.

The residents of Pyrford village feel very strongly that there should not be substantial growth in the size of the village due to development. As a result of the 2016 referendum, Woking Borough Council are required to give due consideration to the views of the residents of Pyrford in their planning decisions.

The proposed developments near Teggs Lane and Upshot Lane, Pyrford for the building of over 400 properties will destroy large areas of green belt surrounding the village. It is this green belt area that has stopped Pyrford from simply being swallowed up by Woking town, enabling Pyrford to maintain it's character as a small, local village.

**Officer Response:**

The Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land and the benefits it brings to the particular communities where the land is situated. Whilst the Council sympathises with this concern, it has ensured through a number of studies that any land that is released from the Green Belt will not undermine its overall purpose and integrity. Taking into account the constraints of the Borough and the available evidence, the proposed allocations are the most sustainable to deliver the objectives of the Core Strategy when compared against other reasonable alternatives. The Sustainability Appraisal Report provides the evidence to support this view. Whilst not underplaying the significance of the benefits of Green Belt land to individual local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.46% of the total area of the Green Belt.

The Green Belt Boundary Review assessed parcels of land against the purposes of the Green Belt, one of which is preventing neighbouring towns from merging into one another, and another purpose is to check the unrestricted sprawl or large built-up areas. The Council do not consider that the potential development of identified parcels around Pyrford would significantly reduce separation between towns or lead to unacceptable urban sprawl.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved.

Overall, the Council is satisfied that the social, environmental and economic character of Pырford will not be significantly undermined.

**Contributor Reference:** 02685/1/001  
**Customer Name:** Ms Lynda Hirst

**Summary of representation:**

Supports the proposal.

Less disruption to residents as there is very little development in this area, making road widening relatively easy, with easier access to the site during construction.

Large enough site to accommodate required housing, if not more, and all supporting infrastructure, rather than overloading existing infrastructure.

Can create a single large housing estate, rather than several smaller, dispersed ones.

The main drainage is being updated so there will be no need for additional disruption for improvements.

Bus and cycle routes are in place.

Close to major employers, providing employment opportunities.

Good access to A320, onto M25, A3, Heathrow, Woking Town Centre and railway, without encountering traffic delays where roads cross railway lines. Congestion in the South of Woking will be even worse when Hoe Valley school opens.

Northern parts of site are largely disused and derelict, and planning permission has already been given for McLaren land – there's a presumption for development.

Less impact on wildlife which is already contained by main roads around the Martyrs Lane site.

No national or landscape designations.

Landscaping surrounding the site to keep the country-feel of the area. Unlike some of the other sites, there will be no need to level escarpments and increase flood defences in order to protect surrounding areas which are built on the floodplain.

**Officer Response:**

Support is noted.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It is also acknowledged that there would be opportunities to accommodate new infrastructure in a single, large site, and that improved drainage may be available. Nevertheless, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The opinion regarding impacts to wildlife is noted. However, the proximity of the site to protected nature sites, such as Horsell Common, would need to be taken into account. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. Policy CS7 would also require development proposals to take into account the wildlife value of the previously proposed sites, and avoid harmful impacts.

Regarding the representation on landscape designations, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape character of these areas. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst it is accepted that the Martyrs Lane site has a good level of screening in parts, the Green Belt review and landscape assessment conclude that the development of the land would lead to urban sprawl and an incursion into the Green Belt. If the originally proposed sites were safeguarded for development, the design of that development would be required to take into account landscape designations such as the escarpment – the escarpment would not be 'levelled', as suggested in the representation.

Section 5 of the Regulation 18 consultation Issues and Matters Topic Paper sets out how the draft Site Allocations DPD is informed by an up-to-date Strategy Flood Risk Assessment. The defined areas of proposed allocated sites where development will be required to be sited are all in Flood Zone 1. Paragraph 5.4 explains how flood risk would not be exacerbated elsewhere by development.

**Customer Name:** Ms Katey Grant

**Summary of representation:**

The land to the east of Martyrs Lane is more accessible to main transport routes and public transport. It is local to the big employers such as St Peter's hospital and McLaren as well as all the facilities of Woking. It is currently unused land and has previously been developed in certain ways, although none of the buildings are used for community purposes.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 00359/1/001  
**Customer Name:** Mr Paul Tuckwell

**Summary of representation:**

Strongly supports the proposal for the following reasons: land to the east of Martyrs Lane has been partially developed in the past; and the access and transport consequences are less impactful than those associated with the sites to be substituted.

**Officer Response:**

Support noted.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on area such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Customer Name:** J P Bowman

### **Summary of representation:**

Objects to the proposal to remove the New Zealand Golf Club from the green belt so that it would be available for development in the future for the following reasons –

- The removal of the Green Belt protection would increase urban sprawl;
- The detrimental effect it would have on Horsell Common, an important SSI area. This Common would be sandwiched between this proposal and the Fair Oaks Airfield development;
- Unsuitable terrain for building upon;
- It would increase the overcrowding on the local roads;
- The required new infrastructure would be very expensive.
- Not enough use is made of brown field sites.

### **Officer Response:**

The representation regarding urban sprawl has been addressed within the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation would rest on balancing all these factors.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The representation regarding traffic and infrastructure has also been addressed within the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Regulation 18 Issues and Matters Topic Paper sets out in detail how the Council has assessed the capacity of previously developed land to meet future development needs, and describes the shortfall in the capacity of the urban area to meet the requirement. Further evidence is in the Strategic Housing Land Availability Assessment (SHLAA) which is available on the Council's website.

### **Summary of representation:**

Agrees with the objections raised by the Woodham and Horsell Neighbourhood Forum, with the following specific objections relating to the immediate area:

#### Communication

Consultation is not wide enough – too few people in the area are aware of it. The consultation exercise is unsatisfactory and does not bring the plan to the attention of those whose homes are in Maybury, Oriental, Pembroke, College and other roads.

#### Fairness

The plan treats the less well off who live in the area with little thought. Many people living in smaller homes find themselves badly affected by congested roads. Many homes have little or no garden to protect those who live there from noise and pollution. People rely on a Council to care for their interests. If this plan goes ahead it is showing little or no regard for those people who are unsure how to navigate through the council's formal systems and processes. Some people will be challenged by the fact that English is a second language.

#### Traffic issues

– pinch points: the plan will worsen traffic pinch points where roads are not fit for purpose. The addition of 1,000+ cars will add to an already appalling road infrastructure in parts of Woodham, Sheerwater and Maybury. Traffic in Old Woking, Maybury, Oriental, Pembroke, College and other roads has increased significantly whilst road conditions have not improved. There have been no improvements despite the Joint Committee being made aware of the issues. There is now a significant rush hour to contend with.

– dangerous roads and junctions: the development would add to the issues with dangerous roads and congested junctions, such as Sixways, East Hill/Old Woking Road, Maybury Hill/Old Woking Road. Pembroke Road will see challenges with the junction with White Rose Lane. Accidents are not uncommon. The use of local residential roads as cut throughs will increase. Pedestrians will find it increasingly difficult to cross roads with a further increase in traffic.

– traffic at Lion Retail Park: The Lion Retail Park is surrounded by pinch points; one is used to access parking for the Mosque and also for traffic using the shops at the Lion Retail Park. Formerly the site housed a DIY store. Since Asda arrived cars routinely queue to enter and exit the car park. This angers those who want to drive straight on and there have been assaults. Crossing the roads to enter the site can be difficult for pedestrians. Pedestrians have been injured at the site.

– deaths: in December 2016 a pedestrian was killed in Monument Road after being hit by a car involved in an earlier collision. Previously a little Muslim child died. At that time Councillor Evans advised that there should be a round table meeting in respect of areas of neglect between Monument Bridge and Oriental Road. Pavements are still too narrow throughout, but particularly under the bridge in Monument Road.

– safety: at the time of the accident in 2001 Cllr Evans said the major road through the heart of Maybury was not pedestrian friendly and gave no pride in the place. The area was unattractive and in poor condition. There was, she said, an urgent need to improve safety. It was to be upgraded to a village. David Bittlestone replied that the Council should be doing something. It

was, he said, an opportunity to look at it and come up with things that may not cost money. My home is adjacent to the area. There is a bit of grass around the Lion Retail Park but a busy Asda store and Costa coffee shop have increased traffic and so danger. A doctor's surgery adds to traffic problems at the roundabout between Maybury and College Road. In Monument Road a food takeaway has been allowed. There is more litter and more and faster traffic. The area remains unloved and challenging for drivers, cyclists and pedestrians.

– road infrastructure/safety at Oriental Road and Monument Bridge: these roads are too congested. There are plans to build a dense development on the station car park. Mothers with young children now complain about safety because the pavement on the St Dunstan's side is narrow, trees are overgrown and vehicles go too fast. Another development is planned at Britannia Wharf and, to add to the mix, something is doubtless planned for the grey building on Monument Bridge. Canal development has been mooted but nothing has been said about road improvements. Schoolchildren walk up Monument Road to the Railway Home in an already busy road situation. To avoid unfairness these issues must be considered as part of this consultation.

– public transport: Buses are infrequent and there is no longer a bus service into town along Oriental Road so transport will be by car. Many people are not sufficiently confident to cycle on these narrow roads.

– congestion: the area around Martyrs Lane is already congested and traffic for the tip queues back to the main roads at either end. Additional homes here will worsen this.

– Sheerwater: the Sheerwater development will increase the number of homes and so cars, bringing greater congestion to the A320, Old Woking Road, East and Maybury Hills, Oriental, College and Monument Roads. When combined with the Martyrs Lane development it is untenable.

#### Pollution and air quality

The proposal will not help reduce air pollution in the area. Poor air quality is detrimental to everyone, particularly, children, the elderly and those in poor health. Council air quality measurement systems have proved inconsistent in Oriental Road with failed readings being not uncommon. There are schools in Onslow Crescent. Woking and Bernard Sunley homes are in the locality. Air quality has deteriorated here. There is also light pollution in many areas, including significant lighting from Lion Retail Park. The Martyrs Lane site lighting would add to the effect removing any change of people seeing a real night sky and add to the challenges.

#### Health

Health walks occur in Woking and these welcome anyone but include people referred by GPs due to illness. The pollution as one crosses the A320 is really disgusting. The Horsell route to the Muslim burial ground exiting at Monument Bridge is not nice as the air can be thick with diesel fumes at Monument Bridge.

#### Surface water

When it rains, water lies on the surface of the road and pavements in Oriental Road. The road has become an increasingly busy thoroughfare to town and the railway station and is used by emergency vehicles. Pedestrians walking on the pavement must dodge the puddles and cars that pass by to avoid being soaked by filthy rainwater. Cyclists are also badly affected. Walking the length of the road in wet weather (particularly on the St Paul's Church side) will be an even more unpleasant and fraught experience should traffic increase due to 1000 new

homes at Martyrs Lane. It will encourage those of us who now walk into town to drive in, which will in turn create more parking issues.

#### New properties and shared occupancy

There has been much infill building already with no consideration for pedestrians. More homes are needed but putting them all in one place will saturate the area with people and traffic. It is grossly unfair to build a large estate on a side of town that is densely populated. Properties should be spread across the Borough to achieve balance. Many homes in Oriental Road are shared and there are too many vehicles for available parking. Many of the new homes planned for Martyrs Lane will be shared occupancy as they will be purchased to let. Rents in this area are too high for many individuals.

#### Green space

There is insufficient green space on this side of town and no play area in the Oriental/Maybury Road area for children to play safely. Woods are not safe places for children. Many gardens are small. This development would create more overcrowding. At a past meeting of the Woking Joint Committee Cllr Kingsbury undertook to look into the provision of a play area but no progress so far. This plan reduces fresh air opportunities.

#### Construction Vehicles

Access via the A 320 would add to congestion. The recent roadworks were an excellent demonstration of potential traffic chaos during construction, road or utility repairs.

#### Policing

Police are under resourced. They are rarely evident in this area, unless passing through. A site of this size would add to the challenges.

#### School Transport Plans

These bring to our roads more vehicles. People travelling from outside areas bring pupils in to Woking to meet school buses going elsewhere. It seems that the Lion Retail Park and adjacent car parks are felt to have no maximum capacity and the effect on nearby residents is not considered.

#### Road repairs

I have previously received apologies from Surrey CC after investigations into the unacceptably long time taken for contractors to repair broken drains and undertake other work in Oriental Road, etc. Reasons included the level of traffic on the road delaying commencement, tardy issue of permits to work due to the needs of the Mosque, church and shops. Repairs will take longer if the plan goes ahead as footfall to the venues will increase.

#### Commerce and connection to Heathrow

The airport coach passes along Oriental Road to the airport via Sixways roundabout. More traffic will produce challenges for Heathrow Express in keeping coaches on time and this in turn will discourage companies locating or remaining here. The Woking to Heathrow trip is currently attractive as a benefit for employers and employees. This development would negate the benefit to business.

#### **Officer Response:**

The objections to the proposal as set out in the representation are noted and will weight in the balance of considerations by Members.

The minimum level of public consultation required for a Regulation 18 consultation on a draft Development Plan Document such as the Site Allocation Development Plan Document (DPD) is prescribed by the Town and Country Planning (Local Planning) (England) Regulations 2012. The Council has also published a Statement of Community Involvement setting out how the community will be involved in the preparation of key planning policy documents. Although this latest round of consultation was not a 'formal stage' in the plan preparation process, the Council has ensured that a similar degree of consultation has taken place to that of the Regulation 18 stage, including sending direct mails to over 2,000 individuals or organisations on the consultation database (from all areas of the Borough), making consultation documents available in local libraries as well as on the internet; holding open days for the public; publishing press notices and news releases in the local newspapers and attending public meetings to discuss the issues. The Council is satisfied that it has done what it can within the available resources to engage the community during this latest round of consultation. It has done so in accordance with the Statement of Community Involvement and all other statutory and policy requirements. All of the Council's Local Development Documents can be made available, on request, in other formats if needed. The Council also recognises that it is important to include those that are seldom heard in the planning process (see paragraph 1.22 of the Statement of Community Involvement). A range of techniques are used to encourage hard-to-reach groups to participate in the plan-making process.

Issues associated with the Lion Retail Park and surrounding areas are outside the scope of this consultation exercise. The Council does, however, recognise that the traffic impacts associated with development can have effects on other parts of the Borough. The Council is fully aware of local resident's concern about the existing traffic conditions and safety on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including the development at Sheerwater. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development. Any transport assessment will take into account background traffic

generated by the existing uses on the site, including the recycling centre. Any development will need to meet the criteria under policy CS18 Transport and accessibility, which ensure development proposals provide appropriate infrastructure measures to mitigate the adverse effects of development traffic and other environmental and safety impacts (direct or cumulative).

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

Air quality in Woking Borough is generally good and in the main meets national air quality standards. The Council assesses air quality in the Borough on a regular basis and if standards are not met, the area is declared an 'Air Quality Management Area'. Currently there is only one AQMA in Knaphill. The Council has recently adopted the Development Management Policies DPD. This contains a suite of policies for 'a healthy built environment'. Any development proposals on allocated land must meet the requirements in these policies in order to be supported by the Council, ensuring that there are no unacceptable impacts on air quality and health and safety of the public. Large developments must submit an Air Quality Assessment, identifying the change in air quality that will result from the proposed development and an appropriate scheme of mitigation.

The Council attaches significant importance to flood risk – including that of surface water flooding – because of its potential threat to the livelihood of residents and local businesses. In this regard, sites are allocated in areas with the lowest probability of flooding from all sources. Where relevant, the key requirements of the proposed allocated sites sets out conditions for the need for a detailed flood risk assessment. This ensures that the development of any site addresses any site specific issues relating to flood risk, including making sure that the development of the site does not exacerbate flood risk elsewhere. Sustainable Urban Drainage Systems (SUDS) are required for major development, which help minimise the risk of flooding – in particular, flooding due to surface water run-off. Policy CS9: Flooding and water management, of the Core Strategy, sets out robust policy requirements for managing the impacts of development on flood risk. This will apply when determining any application that will come forward on any of the allocated sites.

The spatial strategy of the Core Strategy seeks to focus most new development in the main centres which have a range of services and facilities to minimise the need to travel. The draft Site Allocations DPD reflects this strategy. It is also agreed that Green Belt land will be released to meet future development needs between 2022 and 2040. For the Site Allocations DPD to be found sound, the Council has to identify the most sustainable land to meet its future development needs. This must be the most sustainable when compared with all other reasonable alternatives. A lot of studies have been undertaken to enable the Council to make an informed decision on this matter. The spatial distribution of development is therefore driven by sustainability and not by Ward boundaries, or by existing population density. However, the Council did take into account the population profile, likely average property price

and average monthly rent of units whilst assessing sites against the Sustainability Appraisal Framework, in order to provide housing which meets the needs of the community and which is at an affordable price. It is also worth noting that policy CS12: Affordable Housing, would apply to any development coming forward be it at Martyrs Lane or the six other sites.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. The Community Infrastructure Levy and Section 106 contributions will provide significant funding for the infrastructure necessary to support the development of the Martyrs Lane site, and this would include the provision of suitable green space. Policy CS17 of the Core Strategy requires on-site provision of open space and green infrastructure for larger sites. Additional infrastructure requirements could potentially include the improvement of public transport infrastructure provision, such as bus services. As part of the evidence base for preparing the Site Allocations DPD, the Council prepares an Infrastructure Delivery Plan (IDP). The Council consults with many infrastructure providers, including the Police, on the capacity to provide services for proposed sites. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

Any planning approval for a major development would be accompanied by a series of planning conditions, including those requiring various details to be submitted to the Council about construction methods, and submitting a Construction Management Plan. Applicants would have to discharge these conditions as part of gaining approval for the development. The Council does accept, however, that a degree of disruption may be caused by the development of allocated land – although this would occur irrespective of whether it is at Martyrs Lane or the six original sites.

**Contributor Reference:** 02687/1/001  
**Customer Name:** Mr Stewart Mison

**Summary of representation:**

As a resident of Saunders Lane against GB10 and GB11. The sites are unsuitable without major infrastructure changes which would destroy the countryside. The lanes are not suitable for more traffic. There are restrictions in the railway and single lane, weight restricted bridges. Although the Council says these concerns rest with the County Council and not Woking, they need to be considered by the Council. Mayford has no infrastructure to service such development, from local transport to village shops.

Land in Pyrford and Byfleet offer better alternatives, but development here will also destroy and disrupt communities.

The Martyrs Lane site is bounded by good road links with connect quickly to the Town Centre and the motorway, without too many existing restrictions. It will have less environmental impact to residents. The site could look to link/share new amenities with Fair Oaks and Long Cross proposals.

Opposed to further destruction of communities.

**Officer Response:**

Support for Martyrs Lane is noted, and the merits as put forward in the representation will weigh in the balance of considerations by Members.

The Regulation 18 consultation Issues and Matters Topic Paper sets out a detailed response to concerns regarding the originally proposed sites, including those in Mayford. Section 3 in particular sets out how adequate infrastructure, including transport infrastructure, will be provided to support the Site Allocations DPD. Section F also addresses this issue, particularly for Mayford.

Section 24 also sets out how the Council is working in partnership with the County Council in assessing transport impacts, rather than 'delegating' consideration to them as a Highways matter.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including the Martyrs Lane site.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

As emphasised above, the Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land it safeguards will avoid or mitigate impacts to the environment as far as possible. The Development Plan for the area has several planning policies that aim to protect and enhance the environment of the Borough, particularly policies CS7 Biodiversity and nature conservation; CS8 Thames Basin Heaths Special Protection Areas; CS17 Open space, green infrastructure, sport and recreation; and

CS24 Woking's landscape and townscape. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by environmental constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect features of environmental value, within and in close proximity to any of the sites being consulted.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land being considered can be protected.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The suggestion made in the representation to share or link new amenities with nearby development is welcomed and will be discussed with neighbouring boroughs should the Martyrs Lane site be safeguarded.

**Contributor Reference:** 02686/1/001  
**Customer Name:** Mrs S A Palmer

**Summary of representation:**

Objects to the Martyrs Lane proposal and to the original proposals to develop sites in Pyrford.

The New Zealand Golf Course is one of the most famous in England and is over 100 years old. It's a very good way to use the land as people can play into old age and keep fit. Unlike Fair Oaks aerodrome the golf course maintains itself.

If the Government continues to bully the Council we shall end up like another suburb with no green spaces left.

The fields in Pyrford create a break between Pyrford Court and the road to Ripley. Pyrford is already overloaded with traffic; it is difficult to park at the shops and sometimes impossible to drive along the road past the church. No more homes please.

Wisley Airfield would be more appropriate.

**Officer Response:**

The Council acknowledges that the golf club is a significant landowner within the Martyrs Lane site and has received confirmation from the club that the land in its ownership will not be made available for future development proposals of the Council. The availability of the land is a material consideration for the future deliverability of the land as per guidance in the National Planning Policy Framework. However, if the Council decides on the available evidence that the land is the most sustainable to meet the future development needs of the Borough, the lack of availability of parts of the land should not be an absolute constraint to the development of the entire land. The Council has Compulsory Purchase Powers that it could choose to use to acquire land for common good. The historic and recreational significance of the golf course is noted, and will be one of the factors that has to weigh in the balance when the Council makes its decision on the matter. In addition, as part of this consultation, Sport England has been consulted on the proposal and their representation and the Council's response can be accessed for further information.

It is noted in the Core Strategy that a key issue is the need to identify sufficient land that is available and suitable in sustainable locations to meet all types of housing need. Another challenge is to protect the Borough's valuable green, open spaces from the growing pressure for further development that cannot all be accommodated within the urban area and/or on previously developed sites. A Green Belt boundary review (by Peter Brett) was conducted to recommend the release of Green Belt land for development that does not undermine the overall purpose and integrity of the Green Belt.

The Green Belt boundary review report recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation about the contribution the site makes to the separation between urban areas. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Council fully understands the concern about the level of traffic experienced by people and the potential for this to be exacerbated by the traffic implications of developing the originally proposed sites. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under Sections 3, 20, V and U) to traffic concerns relating to the original proposed safeguarded sites.

Transport studies conducted in partnership with Surrey County Council to inform the preparation of the Site Allocations DPD recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine

any site specific mitigation measures that would be necessary to bring forward the development.

It should be noted that Wisley Airfield is not within Woking Borough and as such can not be allocated for development by the Council. This is a matter for Guildford Borough Council.

Land in Pyrford and Byfleet offer better alternatives, but development here will also destroy and disrupt communities.

The Martyrs Lane site is bounded by good road links with connect quickly to the Town Centre and the motorway, without too many existing restrictions. It will have less environmental impact to residents. The site could look to link/share new amenities with Fair Oaks and Long Cross proposals.

Opposed to further destruction of communities.

**Officer Response:**

Support for Martyrs Lane is noted, and the merits as put forward in the representation will weigh in the balance of considerations by Members.

The Regulation 18 consultation Issues and Matters Topic Paper sets out a detailed response to concerns regarding the originally proposed sites, including those in Mayford. Section 3 in particular sets out how adequate infrastructure, including transport infrastructure, will be provided to support the Site Allocations DPD. Section F also addresses this issue, particularly for Mayford.

Section 24 also sets out how the Council is working in partnership with the County Council in assessing transport impacts, rather than 'delegating' consideration to them as a Highways matter.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including the Martyrs Lane site.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

As emphasised above, the Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land it safeguards will avoid or mitigate impacts to the environment as far as possible. The Development Plan for the area has several planning policies that aim to protect and enhance the environment of the Borough, particularly policies CS7 Biodiversity and nature conservation; CS8 Thames Basin Heaths Special Protection Areas; CS17 Open space, green infrastructure, sport and recreation; and

CS24 Woking's landscape and townscape. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by environmental constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect features of environmental value, within and in close proximity to any of the sites being consulted.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land being considered can be protected.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The suggestion made in the representation to share or link new amenities with nearby development is welcomed and will be discussed with neighbouring boroughs should the Martyrs Lane site be safeguarded.

**Contributor Reference:** 02689/1/001  
**Customer Name:** Mrs Sylvia Murphy

**Summary of representation:**

Support the Martyrs Lane proposal

The proposals to develop on Martyrs Lane site or the Saunders Lane site is no contest.

The Martyrs Lane site would be large enough for the project and to provide all the necessary infrastructure

It is close to major employers

The site is served by public transport

The site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre

Congestion on A320 to the South of Woking, also Egley Road and Mayford roundabout

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Summary of representation:**

Would like to recommend all sites.

Lifestyle is causing mental health issues and stress, the current housing system causes problems for people with a single income or if a couple and both have to work the children suffers. Need a new way to house ourselves with affordable homes by creating a community land trust for housing and not growth, through sustainability and well being.

The treatment of agricultural land and value needs to be looked at.

Social care and the cost of a home.

Compulsory Purchase of land.

Identify land for affordable housing. Community Land trust does not build for profit. It builds to provide houses that people can afford.

Rent is lower and affordable and the trust will sell houses at cost and will re-purchase when owners want to move on.

This provides a much less stressful environment and the trust can provide sports and community activities

In flood zones the properties can be built on steel frames and use sheep's wool for insulation.

New developments should have open space, community garden, allotments, sport pitches, school, doctors, library and community dining room.

Elderly accommodation with carers on site. Need for Council social care plan and not private

Pensions to be invested to get a pay out.

Affordable care homes and accommodation for young people coming out of care, prisoners, domestic violence and couples fostering.

Population growth outstrips food production.

Reduce the working week, offer flexible time, job share, work from home and reduce the need for travel

Development land tax on building land. This tax could pay for infrastructure needed for the development.

**Officer Response:**

Many of the issues raised fall outside the scope of this consultation.

The Core Strategy and the Development Management Policies DPD contains robust policies, to ensure sustainability and well being. Particular reference is made to CS12 – Affordable housing, CS13 – Older people and vulnerable groups, CS17 – Open space, green infrastructure, sport and recreation, CS19 – Social and community infrastructure, CS25 – Presumption in favour of sustainable development of the Core Strategy and DM1: Green Infrastructure Opportunities, DM2: Trees and Landscaping, DM3: Facilities for Outdoor Sport and Outdoor Recreation, DM5: Environmental Pollution, DM6: Air and Water Quality, DM7: Noise and Light Pollution, DM8: Land Contamination and Hazards, DM12: Self Build and Custom Build Houses, DM21: Education Facilities and DM22: Communications Infrastructure of the Development Management Policies DPD.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability.

Regarding the representation relating to specialist accommodation, it should be noted that Core Strategy Policy CS13: Older people and vulnerable groups, sets out how the Council will facilitate the delivery of specialist accommodation in the borough. This includes accommodation for the most vulnerable members of the community.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

As part of the Site allocations DPD sites were allocated for affordable housing this can be found on the Council website.

The Council can bring forward the development of land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding.

In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Development Management Policies DPD contains Policy DM12: Self-build and custom-build houses. The Council will support in principle the development of self and custom-build homes and custom-build projects in suitable locations, where they support the delivery of the Core Strategy and meet all other requirements of the Development Plan for the area. The Council has a Self Build and Custom Housebuilding Register to help establish the level of need in the Borough, and will also be informed by future reviews of the Strategic Housing Market Assessment. Each application for this particular type of housing will be determined on its individual merits. The Council particularly encourages applications from community-based custom-build projects and will use its existing evidence base such as the Strategic Housing Land Availability Assessment to help applicants to identify suitable sites.

**Summary of representation:**

Concerns with the impact on the mature woodland in the site. If part of the land is considered I would strongly recommend a clearance area around the woodlands of at least 200m.

**Officer Response:**

The Council is aware of the existing designated Ancient Woodward towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. At the development management stage surveys will be required. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

**Summary of representation:**

Too many houses on a single site

Doctors surgeries and local hospitals are at capacity

Insufficient Schools in the area

Traffic impact on the roads and A320

Impact on environment and Horsell common, wildlife, birds and insects.

Disruption to local people , devalue houses, pollution and stress

Smaller blocks around the borough is better with affordable homes.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of school provision, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Infrastructure Delivery Plan notes that at present there is adequate GP provision to meet overall demand in the Borough. Whilst this is the case, it is also accepted that there might be locally specific pressures of over subscription that needs to be addressed. Whilst traditionally health provision reacts to meet projected demand, the Council is seeking to work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

The Council's response to the issues of traffic and wildlife can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the value of land and property is not a material planning consideration, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The social and environmental implications of the development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Contributor Reference:** 00262/1/001

**Customer Name:** Leslie Phillips

**Summary of representation:**

Support for development at Martyrs Lane and understand that there will be suitable infrastructure and will be self contained. The land is not prime agricultural land and the surrounding roads can be widened to cope with the extra traffic. This is preferred than small piecemeal developments dotted around with inadequate infrastructure and facilities.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

In terms of the roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Summary of representation:**

The proposed location is too near to the proposed development at Fair Oaks Airport and at Longcross. All three developments will concentrate additional traffic onto the strategic A320 road north of Woking which without drastic improvements will not be able to cope. A secondary issue would be the impact on the A245 Woking to A3 Cobham route which is already badly congested through West Byfleet & Byfleet.

More generally developments of this nature and size within North West Surrey are wholly inappropriate without massive investment in the infrastructure, e.g. Roads, rail, schools, health centres & possibly another hospital, or expanding St. Peter's Hospital.

**Officer Response:**

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites. The Council is satisfied that the sites can be developed with the necessary infrastructure to support their sustainable delivery.

**Customer Name:** Mr Paul De Kock

### **Summary of representation:**

The proposal makes more sense than encroaching on the various villages for several reasons. Firstly there would be access to the M25 and A3 without extra traffic congestion within Woking Town itself and surrounding villages. Disruption of building works would be confined to one area of the Borough only. No encroachment of Common Land or wildlife habitats of said commons or major disruptions of several sites within the Borough. Planning consent exists within the Martyrs lane area already, hence not designated Green Belt. There are other Golf Courses which can serve the public. Some of the site proposed has had no viable use since WW2 and unless designated Common Land usage, the area is dormant.

### **Officer Response:**

In terms of road and traffic congestion, The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Martyrs Lane site is in close proximity to Horsell Common and the land could be wildlife rich. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that the land within the Martyrs Lane site is not designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. However, it is not dormant and does contain existing structures and buildings, such as sports facilities,

agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 00263/1/001  
**Customer Name:** Mr David Elliott

**Summary of representation:**

The proposal appears to be for 3500 new houses and associated 5000 cars. There is no additional infrastructure such as schools or medical centres to support the development. The density of the housing proposed would be unsustainable given the area and should be reduced. There is no additional road network provision and will increase the current congestion. This open space should not be developed upon and will harm the natural habitat of wildlife, fauna and flora. Development on current open land would increase the risk of surface water flooding.

**Officer Response:**

3500 new houses and 5000 cars is an incorrect statement. It is anticipated that the site is sufficient to enable the delivery of at least 1,200 net additional homes and the necessary green and other infrastructure to support the potential development of the site.

In terms of infrastructure such as schools and medical centres. The Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

In terms of transport provision, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various

development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of wildlife, fauna and flora the land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The site would have been designated as SPA by Natural England if any presence of Dartford Warbler and Nightjar were significant enough to justify designation. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

In terms of the risk of flooding, Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Based on the above, it is not envisaged that the occupants of the development on the site would face unacceptable risk of flooding. Insurance of properties that could be developed on the site

would not be adversely affected and the development of the site would not exacerbate flood risk elsewhere.

**Summary of representation:**

The Martyrs Lane site is suitable for the development of a community with adequate facilities and infrastructure and the A320 towards the M25 has scope for some long-term upgrading.

**Officer Response:**

In terms of community and infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of roads, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00227/2/001  
**Customer Name:** Mr And Mrs D Ling

**Summary of representation:**

The Martyrs Lane site is designated as Green Belt and provides an area of countryside between the towns of Woking and Horsell and West Byfleet and Woodham. Thus presenting a break between the development of these settlements.

Development of this land will increase already heavy traffic gridlock and air pollution and congestion.

It will put considerable strain on public services which are already at capacity.

The site is not in close proximity to existing services and this will impact traffic and congestion further.

The land bordering the River Bourne is subject to flooding,

The Green Belt exists to stop the urban sprawl, and protect areas of natural beauty. This Green Belt must not be removed.

**Officer Response:**

The representation regarding urban sprawl as been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. In particular, the Council's Landscape Assessment and Green Belt Review (2016) notes the distances between the Martyrs Lane site and existing settlements including Woodham and Ottershaw. The review, in short, notes that the site is of critical importance towards the purposes of Green Belt and in particular that the site has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging. However the report also notes that the Bourne River and associated flood zone to the north acts as a very strong durable boundary in preventing incursion into the Green Belt.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of development, regardless of whether it is at Martyrs Lane or any of the other sites, will be fully assessed as part of the development

management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding flooding and further information on infrastructure provision and funding can be found in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Regarding the representation on natural beauty, the Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The special protection of Horsell Common would be detrimentally impacted by development on this land, due to increased footfall.

**Officer Response:**

The Council's response to the representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Light contamination pollution (harms wildlife)

Noise pollution. I have counted 61 birds species in my garden. Also I have had deer and stoat and hedgehog. Nearby I've have the rare Dart Ford Warbler.

**Officer Response:**

The Council's response to the representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

The environmental implications of any proposed development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

### **Summary of representation:**

In agreement to substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future needs of the borough between 2027 and 2040. Reasons include:

- Although the proposed Martyrs Lane site is in the green belt it has no additional national or local landscape designations, unlike for example the two sites on the Hook Heath escarpment (GB10 and GB11).
- The land is north of the New Zealand golf course and is largely derelict and disused.
- Planning permission was previously granted for McLaren to build a technology centre on part of the site. Therefore, there is a presumption that the land is suitable for development.
- The A320 is adjacent to the site providing easy access to the M25 and Heathrow Airport to the north, and Woking town centre and mainline railway station to the south without encountering the traffic delays experienced on the A320 south of Woking. Therefore, The Martyrs Lane proposal is a far better option than building south of Woking where the A320 is often at a standstill in the morning rush hour, and will increase once the new Hoe Valley School opens.
- Bus routes and cycle routes, including to Woking town centre already exist.
- There is little development along the A320 north of Woking, making road widening relatively easy if necessary.
- There are major employers nearby, e.g. St Peter's Hospital, the Animal and Plant Agency, and McLaren Technology Centre.
- A neighbourhood centre on the proposed site would provide additional employment opportunities.
- The site is large enough to accommodate 1200 houses, including affordable housing together with the necessary supporting infrastructure of shops, primary school, health centre, etc., without encroaching on the golf course.
- There are advantages in the creation of a single new housing estate rather than several dispersed small ones.
- It is much easier to create the new supporting associated infrastructure rather than overload the existing over-stretched facilities.
- It will also simplify the process for obtaining planning permission.
- Due to the size of the Martyrs Lane site there is scope and potential not only to build all the properties necessary, but even more if it subsequently turns out that more than 1200 are needed, or if there is a further requirement post 2040.
- Boundaries of the site are surrounded by a mixture of dense mature woodland that will reduce the impact of the development.
- Safeguarding this site now will mean that it could be taken into account in the redevelopment of Sheerwater.

## Officer Response:

Support is noted. The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the Hook Heath escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. Parcels of land north of the golf course were assessed as part of the Site Allocations DPD process, and ruled out as their development would lead to isolated development in the Green Belt (see paragraph 3.5.11 of Peter Brett's Green Belt Boundary Review report). This is why the Golf Course has now been included in the proposal.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made a representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along

the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. Policy CS12 of the Core Strategy on Affordable Housing would also apply to development at Martyrs Lane and the six other sites irrespective of their location or size (they will all result in over 10 dwellings per site and be subject to the policy criteria).

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. Policy CS12 of the Core Strategy on Affordable Housing would also apply to development at Martyrs Lane and the six other sites irrespective of their location or size (they will all result in over 10 dwellings per site and be subject to the policy criteria).

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Summary of representation:**

Having multiple sites allows distribution of traffic through different routes and provides better integration with already formed communities. Allocating one large site on land to the east of Martyrs Lane puts huge pressure on one route – the A320. Given the route from the M25 to Woking is the main access route for emergency services, the additional traffic on a single lane main road puts additional lives at risk.

Furthermore, this area is home to birds and wildlife, and developing such a huge site will have a negative impact.

Preference would be for a smaller site. The current proposal would put huge pressure on one area, which is not a good idea.

**Officer Response:**

The Council has carried out a series of transport studies to determine the highway impacts for developing the sites identified for development. The studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. Policy CS18 on Transport and accessibility in the Core Strategy sets out requirements for developments to ensure highway safety is maintained. In addition, each of the allocated sites – whether they be the six original sites or one large site – will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with Surrey County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. The work is ongoing and will be completed before the Site Allocations DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications for safeguarding the land east of Martyrs lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Site of Special Scientific Interest or common land. The site would have been designated as SPA if any presence of Dartford Warbler or Nightjar were significant enough to justify designation. The Core Strategy and Development Management DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development.

Development would be detrimental to Horsell Common SPA.

Local parking in West Byfleet and Woking is already at capacity.

**Officer Response:**

The Council's response to the representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

In addition, it is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The Council has Planning Policy and parking standards in place to ensure that new development provides the necessary parking provision to make the development acceptable and ensure highways safety. This is considered in detail at the Development Management stage. It should be noted that the Council has recently consulted on its updated Parking Standards and is in the process of adopting these new standards to ensure that local standards are in general conformity with national planning policy. The updated parking standards state that in areas with good public transport provision such as Woking town and West Byfleet district centre, a lower parking provision may be acceptable.

**Customer Name:** Thames Water Planning and Property

**Summary of representation:**

The originally proposed sites have been assessed on an individual basis with only limited opportunity to consider cumulative impacts, therefore the impact of multiple sites may have greater impact. The scale, location and time to deliver any required network upgrades will be determined after receiving a clearer picture of location, type and scale of development, together with its phasing. Although of significant size, the land to the east of Martyrs Lane is the preferred option as it is more straightforward to plan for the necessary infrastructure than a number of smaller sites delivering the same number of houses.

A key sustainability objective for the preparation of Local Plans is for new development to be coordinated with the infrastructure it demands, and to take into account the capacity of existing infrastructure. The NPPF states "Local planning authorities should set out strategic policies for the area in the Local Plan. This should include strategic policies to deliver:...the provision of infrastructure for water supply and wastewater" (para.156). The NPPF goes on to state "Local planning authorities should work with other authorities to: assess the quality and capacity of infrastructure for water supply and wastewater and its treatment...take account of the need for strategic infrastructure including nationally significant infrastructure within their areas" (para.162).

The NPPG sets out that Local Plans should be the focus for ensuring that investment plans of water and sewerage/wastewater companies align with development needs: "adequate water and wastewater infrastructure is needed to support sustainable development" (para.001, ref ID: 34-001-20140306).

It is important to consider the net increase in water and wastewater demand to serve the development and also any impact that developments may have off site, further down the network. It is therefore important that developers demonstrate that adequate water supply and wastewater infrastructure capacity exists both on and off the site to serve the development and that it would not lead to problems for existing users. In some circumstances this may make it necessary for developers to carry out appropriate reports and appraisals to ascertain whether the proposed development will lead to overloading of existing water and sewerage infrastructure. Where there is a capacity problem and no improvements are programmed by the water company, then the developer needs to contact the water company to agree what improvements are required and how they will be delivered prior to any occupation of the development. Thames Water recommends that developers engage with them at the earliest opportunity to establish the following:

- The developments demand for water supply and network infrastructure both on and off site and can it be met;
- The developments demand for Sewage/Wastewater Treatment and network infrastructure both on and off site and can it be met; and

-The surface water drainage requirements and flood risk of the development both on and off site and can it be met.

**Officer Response:**

The merits of providing water supply and sewerage/wastewater infrastructure for one larger site as opposed to a number of smaller sites is noted and will weigh in the balance of considerations by Members.

The Council acknowledge the guidance in the NPPF and NPPG to facilitate the delivery of infrastructure. Policy CS16 of the Core Strategy states that the Council will work in partnership with infrastructure service providers to ensure the infrastructure needed to support development is provided. A definition of infrastructure is included under paragraph 5.132, which includes utility services: water supply and waste water treatment. Policy CS16 goes on to state that the necessary infrastructure must be provided on site for developments to be acceptable.

The Core Strategy and draft Site Allocations DPD are supported by an Infrastructure Delivery Plan (IDP) that sets out the capacity of existing infrastructure, the impact of development on that infrastructure, and the likely funding sources available to meet future needs. It also includes a schedule of infrastructure that is considered necessary to support the spatial strategy. The IDP is currently being updated and Thames Water has been contacted to contribute to this project, in particular to assess the quality and capacity of water/wastewater infrastructure for proposed site allocations across the Borough. This work is ongoing and will be completed before the DPD is submitted for 'Regulation 19' consultation. The Council will work with Thames Water to ensure that the necessary water supply and sewerage/wastewater infrastructure is delivered to support future housing growth, irrespective of whether it is via a single site or multiple sites.

In addition, the Sustainability Appraisal Framework against which each proposed site allocation was assessed for sustainability, contained at Objective 14 the aim to "maintain and improve water quality of the region's rivers and groundwater, and manage water resources sustainably". Decision-aiding questions included: would the development of the site i) support the efficient use of water resources, ii) operate within the existing capacities for water supply and wastewater treatment, and iii) provide adequate wastewater and sewerage infrastructure? The outcome of the Sustainability Appraisal was to include optimising/mitigating measures against various site allocations requiring the design of development to provide suitable wastewater and sewerage infrastructure. Each site allocation in the draft Site Allocations DPD consists of a set of 'key requirements' which should be met to achieve sustainable development. Where relevant, allocated sites will be required by planning policy to undertake detailed assessment to determine whether adequate water supply, wastewater and sewerage infrastructure will be delivered to support the development, and would not lead to problems for existing or new users.

No infrastructure has been proposed and as a result existing problems will increase, including Traffic.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 01994/1/001  
**Customer Name:** Mrs Marie Craig

**Summary of representation:**

It is not clear how many dwellings are being proposed on land east of Martyr's Lane.

There is no information provided regarding any additional infrastructure to support the level of growth. The surrounding roads are already problematic and congested . Schools and GPs are oversubscribed because of too many people. Even allowing for deaths and migration, the problems will increase in ten years' time.

There is no sense in increasing the population and cars at Martyr's Lane when there are alternative areas to build communities with the necessary new roads, schools and doctors' surgeries.

Healthy sustainable communities require a balance of housing and amenities. I am not in favour of new building unless the infrastructure is improved accordingly.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The number of proposed dwelling on the Martyrs Lane site is 1200. As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as

envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 01097/2/001

**Customer Name:** Ms Kim Bent

**Summary of representation:**

Concerns about overcrowding– including traffic and roads.

Concern about the loss of outdoor spaces– including forests

**Officer Response:**

The Council's response regarding traffic and loss of forest can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The Council has its own locally specific policy which establishes the importance of open space to the wellbeing of the community and the need for their protection and provision where needed. Policy CS17: Open space, green infrastructure, sports and recreation of the Core Strategy establishes a presumption against any development that would involve the loss of facilities except where it can be demonstrated that there is excess of provision, or where alternative facilities of equal or better quality will be provided as part of the development.

It is important to stress that Policy CS17 requires all development to contribute towards the provision of outdoor facilities. If the land is safeguarded appropriate contribution will be sought towards enhanced outdoor facilities. The Council's Regulation 123 List makes open space and recreational facilities a priority to benefit from CIL funding. This can be planned as an integral part of the proposed development on site or contributions could be made to provide alternative facilities at a location that is accessible to users or to enhance existing facilities where maximum benefits could be achieved.

**Customer Name:** Mr Douglas MacDonald

**Summary of representation:**

Concerned about 400 homes in Mayford in addition to the recent development nearby at Kingsmoor. Development would have an adverse impact on social and community facilities and traffic.

There seems to be no consideration for the impact of development on infrastructure and the lives of existing residents.

**Officer Response:**

The Council notes the representation outlining reasons against safeguarding land for future development needs in other areas of the Borough. This will be taken into account to inform the preferred approach to safeguarding.

Further details can be found in the Regulation 18 Consultations Issues and Matters Topic Paper in particular Sections 3.0 and 21.0.

**Contributor Reference:** 02966/1/001  
**Customer Name:** Mr Kevin De Cruz

**Summary of representation:**

There is a clear local demand for housing and therefore all of the sites should be safeguarded for future development needs.

**Officer Response:**

Support for all of the proposed safeguarded sites is noted.

The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation will rest on balancing a number of factors including weighing up the most sustainable site(s) when compared against the other reasonable alternatives.

**Customer Name:** Mr Daniel Sturgeon

**Summary of representation:**

Concerned about overcrowding– including already congested roads

Concern about the loss of outdoor open space including forest.

**Officer Response:**

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council is aware of the existing designated Ancient Woodward towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. The nature and type of some of the surveys that will be required to accompany any development proposals are set out in Section 9 above. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

The Council has its own locally specific policy which establishes the importance of open spaces to the wellbeing of the community and the need for their protection and provision where needed. Policy CS17: Open space, green infrastructure, sports and recreation of the Core Strategy establishes a presumption against any development that would involve the loss of facilities except where it can be demonstrated that there is excess of provision, or where alternative facilities of equal or better quality will be provided as part of the development.

It is important to stress that Policy CS17 requires all development to contribute towards the provision of outdoor facilities. If the land is safeguarded appropriate contribution will be sought towards enhanced outdoor facilities. The Council's Regulation 123 List makes open space and recreational facilities a priority to benefit from CIL funding. This can be planned as an integral part of the proposed development on site or contributions could be made to provide alternative facilities at a location that is accessible to users or to enhance existing facilities where maximum benefits could be achieved.

**Contributor Reference:** 02716/1/001  
**Customer Name:** Mr Christopher Paul Carter

**Summary of representation:**

Supports proposal as a good alternative – queries why it wasn't considered earlier.

Previous sites raised concerns for fear of losing Green Belt – particularly around Mayford. Also due to potential pressure on local roads and infrastructure.

Can't see how Woking will cope with upwards of 1000 homes, especially taking other housing projects such as Moor Lane and Woking Football club into consideration. Where will people find employment, schools, health care, amenities, transport etc.

The proposal site has easy access to main routes such as M25, airports, and south to Woking and its station. There is already a high density of northerly traffic flow on the A320.

But concerns include sufficient preparation for such an increased number of homes; providing sufficient local employment; pressure on services; and quality of life of current residents.

**Officer Response:**

Support, with concerns, is noted.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. The Council therefore did in fact consider parts of the site early in the DPD preparation process, and it was due to a change of circumstances with land in ownership of McLaren that the site was reconsidered.

The Regulation 18 consultation Issues and Matters Topic Paper sets out a detailed response to the concerns regarding the originally proposed sites, particularly in Sections 3 (regarding infrastructure provision) and Sections A, C, F, and G regarding impacts on Mayford.

It also sets out how housing will be delivered without undermining the overall purpose and integrity of the Green Belt and how site allocations will be the most sustainable option (Section 1). In order to accommodate more housing, the Core Strategy also identifies the broad location for new jobs, community facilities and services and how they will be delivered; and a framework for securing the necessary infrastructure to support development, including transport, education, health, utilities, open spaces and green infrastructure.

The draft Site Allocations DPD has been informed by a number of studies, such as Transport Assessments and an Infrastructure Delivery Plan (see Section 8 of the Topic Paper for additional evidence), to ensure that the development of a site – and its future inhabitants – is supported by sufficient infrastructure.

The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Section 21 of the Regulation 18 consultation Issues and Matters Topic Paper describes how the quality of life of residents will be maintained. This would equally apply to release of Green Belt land at Martyrs Lane.

Summary of representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 00225/1/001  
**Customer Name:** Ms Carey Leach

**Summary of representation:**

It would exacerbate levels of traffic – particularly on A320 and out onto the M25. It would add to an already overpopulated area (the highly developed land around Sheerwater). Local infrastructure facilities – e.g. West Byfleet Medical Centre – would not be able to support a development of this magnitude. The green areas of the Borough should be retained. Priority should be to redevelop disused/derelict sites to address housing need.

**Officer Response:**

The traffic implications of the proposal, including the impacts on the A320 and roads out onto the M25, are addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The justification for releasing Green Belt land for development to meet future development requirements of the Core Strategy is set out in Paragraph 1 of the 'Regulation 18 Consultation issues and matters topic Paper'. Paragraphs 1.6–1.9 explain how previously developed land was initially assessed, but that land will be required to be released from the Green Belt to meet housing delivery between 2022 and 2027 because sufficient sites could not be identified in the urban area to meet the requirement over the entire plan period. Section 2.0 of the topic paper addresses the requirement to safeguard land for future development needs.

**Contributor Reference:** 02779/1/001  
**Customer Name:** Ms Patricia Cryer

**Summary of representation:**

Fewer people will experience negative impacts. The land to the east of Martyrs Lane is closer to the M25 for residents' ease of access.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is

submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02780/1/001  
**Customer Name:** Mr Neil Search

**Summary of representation:**

Regulation 18 proposed safeguarded sites are more appropriate sites for removal from Green Belt for residential development.

The land to the east of Martyrs Lane has many issues, particularly the proximity of a busy road which is frequently closed.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The preference towards the original proposed sites as set out in the representation are noted and will weigh in the balance of considerations by Members.

**Contributor Reference:** 02782/1/001  
**Customer Name:** Mr Keith Parker

**Summary of representation:**

Safeguarding land to the east of Martyrs Lane rather than the originally identified sites would be excellent because: developing one site against six would reduce costs; area disruption would be reduced five-fold; the infrastructure, road access etc would be better here; benefits of developing one large area, similar to the successful Goldsworth Park development, rather than six small developments which would cause major disruption.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02783/1/001  
**Customer Name:** Mr John Douglas

**Summary of representation:**

Objects to the proposal due to limited facilities such as off-street parking, medical and public services.

**Officer Response:**

If the site were safeguarded for housing development, any planning application coming forward would be assessed at Development Management stage to ensure that satisfactory parking standards – including off-street parking – were met.

The provision of suitable infrastructure, including social infrastructure such as medical facilities, is addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02786/1/001

**Customer Name:** M Schafer

**Summary of representation:**

The area cannot sustain increased population: the surrounding infrastructure such as station car parks, schools, utilities and poorly maintained roads are at capacity and suffer traffic problems.

**Officer Response:**

It is acknowledged that an increase in population as a result of housing development would increase pressure on infrastructure. This would be the case irrespective of whether it is a single site on land east of Martyrs Lane, or at the originally proposed sites. However, the Council would ensure that the development of any land it safeguards is supported by adequate and necessary social and physical infrastructure such as schools and roads. The traffic and infrastructure implications of the proposal are addressed in more detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including how infrastructure is funded.

**Contributor Reference:** 02787/1/001  
**Customer Name:** Mr Laurence Rogers

**Summary of representation:**

The advantages of developing land to the east of Martyrs Lane, rather than the Mayford/Hook Heath sites, include: a larger site which could accommodate 1,200 houses, including affordable housing, as well as necessary infrastructure, without encroaching on the golf course; economies of scale associated with one larger site make it easier to create associated infrastructure and simplify the process for obtaining planning permission; proximity of major employers; opportunity to provide a new neighbourhood centre as part of the development, providing employment opportunities; better surrounding transport infrastructure with easier access to the M25, Heathrow Airport and to Woking Town Centre; good existing cycle and bus routes; easier road widening of the A320 if necessary due to little development long this road. The road network at the Mayford/Hook Heath sites can't take more traffic, and local infrastructure here is over-stretched. The A320 to the south of Woking is overburdened with traffic.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply equally to development at both Martyrs Lane and the six other sites.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. It is important to note that the Council has carried out a Green Belt boundary review that assessed the sustainability of the six previously proposed sites. The outcome of the study demonstrated that the six sites are also in sustainable locations, and in reasonable proximity to existing local services and community facilities.

The Council has the resources and expertise to determine planning applications for single or multiple sites, and development of a single site would not necessarily simplify the process for obtaining planning permission.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Consultation Issues and Matters Topic Paper sets out a detailed response to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

**Contributor Reference:** 02788/1/001  
**Customer Name:** Ms Harriet Geis

**Summary of representation:**

There is not enough infrastructure, such as schools and roads, to support a development of this scale. The limited road infrastructure would exacerbate traffic on already heavily trafficked roads. Development would cause flooding due to lack of drainage.

**Officer Response:**

Traffic and infrastructure implications of the proposal are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, taking into account the scale of development. Flooding implications are also addressed in detail in the Paper.

**Contributor Reference:** 02796/1/001  
**Customer Name:** Ms Fiona Stafford

**Summary of representation:**

The land east of Martyrs Lane is big enough to accommodate 1200 houses, including affordable housing and necessary infrastructure, without encroaching on the golf course. One single large housing estate makes it easier to create that infrastructure, rather than overloading existing over-stretched facilities. The planning permission process would be simplified. There are three major employers nearby, and a new neighbourhood centre on the site could provide additional employment opportunities. The A320 provides good access to the M25, M3 and M4, and Woking Town Centre, as well as the Woking mainline station and West Byfleet station. There are existing bus and cycle routes, including to Woking Town Centre. There is little development along the A320 north of Woking, making any necessary road widening easier. The A320 south of Woking experiences too much traffic already. Although in the Green Belt, the site has no national or local landscape designations unlike the originally proposed safeguarded sites. North of the golf course the land is largely disused and derelict, and planning permission has previously been granted so there is a presumption that the land is suitable for development. The size of the site allows at least 1200 dwellings, or more if needed, to be delivered. A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply equally to development at both Martyrs Lane and the six other sites.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications.

The Council has the resources and expertise to determine planning applications for single or multiple sites, and development of a single site would not necessarily simplify the process for obtaining planning permission.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. Parcels of land north of the golf course were assessed as part of the Site Allocations DPD process, and ruled out as their development would lead to isolated development in the Green Belt (see paragraph 3.5.11 of Peter Brett's Green Belt Boundary Review report). It is accepted that the Martyrs Lane site does not contain landscape constraints such as those designated under policy CS24 of the Core Strategy (i.e. 'escarpment and rising ground of landscape importance'), but it does in fact contain other development

constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

**Contributor Reference:** 02818/1/001  
**Customer Name:** Ms Julie Drake

**Summary of representation:**

The originally proposed safeguarded sites in Pyrford and Byfleet suffer from congested roads, and their infrastructure and local facilities are at capacity: these areas cannot cope with additional housing and the significant increase in cars. The Martyrs Lane site benefits from more direct access to main roads such as the A320 and M25.

**Officer Response:**

The merits of land east of Martyrs Lane in terms of ease of access to main roads are noted and will weigh in the balance of considerations by Members. The implications of developing the Regulation 18 safeguarded sites on local traffic and infrastructure are addressed in the Regulation 18 Issues and Matters Topic Paper (see Section 3). For example, the Green Belt Boundary Review Sensitivity Test – Strategic Transport Assessment (2015) (TA) assesses transport implications of the originally proposed allocated sites. The TA acknowledges that there will be a net but marginal increase in traffic over and above the existing situation, which could be mitigated to enable the delivery of the proposed allocated sites. The mitigation measures would comprise both strategic schemes to be funded by developer contributions and other sources of funding and by site specific measures to be determined as part of a detailed Transport Assessment supporting planning applications.

**Contributor Reference:** 02819/1/001  
**Customer Name:** Mr John Cooke

**Summary of representation:**

An acceptable site for development as it is more remote and will have little impact on existing homes. Main concern is increase in traffic on the A320, particularly at McLaren's roundabout. The cycle lane needs improving to reduce risk of traffic jams caused by cyclists on the road.

**Officer Response:**

Support for the site is noted. The Council has carried out a series of transport studies to quantify and forecast vehicular trips that would be generated by various development options. The collective outcomes of these studies have provided a good understanding of the highway impacts, including those on the A320 and the McLaren's roundabout. The studies conclude that traffic at existing hotspots – including the A320 Chertsey Road / Guildford Road – will be exacerbated. If the Martyrs Lane site were considered for safeguarding, it would require necessary and appropriate mitigation measures to address forecast traffic impacts, and ensure the sustainable development of the site. The studies recommend a series of both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. It is possible that one of these mitigation measures could include improved cycling infrastructure to ease traffic.

In addition, each of the allocated sites will be required to undertake detailed transport assessments to determine site specific mitigation measures that would be necessary to bring forward any development. The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Contributor Reference:** 02822/1/001

**Customer Name:** Mr And Mrs Leo And Monica Iles

**Summary of representation:**

Strongly object to inappropriately planned development taking place on the following originally proposed 'Regulation 18' sites:

Ten Acre Farm (there is no justification for further expansion of the site, and development would increase risk to wildlife);

Nursery land adjacent to Egley Road (the infrastructure of Mayford cannot support the changes here);

Woking Garden Centre, Egley Road (inadequate footfall to become a viable shopping centre, and would add to traffic here);

Land adjacent to Hook Hill Lane, Hook Heath; Land to the north east of Saunders Lane; Land to the north west of Saunders Lane. Successive Planning Inspectors have refused housing applications on these rural parcels of Green Belt land.

Brownfield sites that have been formally added to the draft Site Allocations DPD in October 2016, such as land to the east of Martyrs Lane (SG1) could absorb the housing that could be built on these land parcels above many times over. With ten years to plan for them and a further thirteen years within which to build them. You have no case for the inclusion of any of the listed sites above in Mayford for this development.

**Officer Response:**

The Council has conducted a Strategic Housing Land Availability Assessment (SHLAA) to assess the capacity of the urban area (including brownfield land) to accommodate the area's housing requirement. The outcome of the SHLAA indicated a shortfall in the capacity of the urban area to meet the requirement over the plan period. The justification for release of Green Belt land for future development is addressed in detail under Section 1 of the Regulation 18 consultation Issues and Matters Topic Paper. The Topic Paper also explains under Section 4 why Green Belt land has been allocated to meet the needs of Travellers. Paragraph 4.8 in particular sets out why Ten Acres was identified and why it is considered suitable for additional pitches. Section 3 of the Topic Paper describes how adequate infrastructure provision will be made to support the Site Allocations DPD, and how Transport Assessments have informed the allocation decision-making process. The County Council as the Highway Authority for the area is satisfied that the approach to mitigation taken by the Council will minimise any adverse traffic impacts of the DPD to enable development to be acceptable in transport terms.

The merits of allocating land to the east of Martyrs Lane as set out in the representation are noted, and will weigh in the balance of considerations by Members.

**Customer Name:** Mr And Mrs Martin And Shirley Bartley

**Summary of representation:**

Objects to the proposal because:

1. The whole of the site falls within the green belt. When the Council granted planning permission to McLaren to build a technology centre on their existing site in 2015 it was agreed that Plan/2011/0823 would be revoked.
2. The site is adjacent to Horsell Common which is a SSSI and has protection status (SPA) this includes a development protection zone. Much of the proposed land falls within in the protection zone.
3. Much on the land, to the north along the River Bourne, which is not part of the golf course, falls within zones 2–3 of the Environment Agency Flood Planning map, thus increasing flooding.
4. The access to the site would be via the A320 which suffers from considerable congestion and more development would cause grid lock
5. Lack of infrastructure e.g. hospitals, schools, surgery etc. which are at capacity
6. Fair Oaks development impact

**Officer Response:**

Objection is noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses the issues raised in detail, including:

- Likely impact on the integrity of the Green Belt;
- Planning history regarding the revoked planning permission for McLaren land;
- Assessment of flood risk and avoidance of Flood Zones 2–3;
- Transport impacts, including on A320 and how mitigation measures would be required;
- Infrastructure provision to support development.
- Fair Oaks impact

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

**Contributor Reference:** 02717/1/001

**Customer Name:** G E Sheat

**Summary of representation:**

The outlined development at Martyrs Lane is considered on balance preferable to the other 6 sites.

The site is more coherent, self contained and providing the much needed housing subject to the following provisos:

The smaller sites are not nibbled at except perhaps the smallest

Enhanced, sufficient improvements to access roads, especially A320 leading to M25. Also eventually the M3 junction with Chobham bypass.

The site has full amenities including bus routes, trains, shopping, access to Sheerwater and West Byfleet, otherwise it would generate traffic

Proximity to large employers like McLaren, could live on site

Overall an attractive layout with amenity land with an appropriate housing mix

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full

and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment and tree survey to determine the levels of valuable landscape features on the site. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to in regards to design and housing mix. Particular reference is made to Policies CS10: Housing provision and distribution, CS11: Housing mix, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

**Customer Name:** Mr Jamie Sharpley

**Summary of representation:**

Does not agree with creating a new area of development. Prefers Regulation 18 proposal.

**Officer Response:**

Preference for Regulation 18 proposals noted.

**Contributor Reference:** 00195/1/001  
**Customer Name:** Mr Michael Smith

**Summary of representation:**

Does not support the proposal. Land to the east of Martyrs Lane is less appropriate than previously identified sites. Surrounding roads are at saturation point for traffic. Part of the site has a high water table. A large part of the site is for recreational use (the golf course). All of the site is within the Green Belt. Site is remote from infrastructure provision. No planning history for residential use; and economic use of northern part of site granted under 'Very Special Circumstances'.

The Regulation 18 proposed sites would benefit from local infrastructure provision. Traffic will be reduced by dispersed nature of sites. All would result in expansion of existing urban environment. Sites were proposed on basis of a Borough-wide Green Belt Boundary Review.

The introduction of the site to the east of Martyrs' Lane at this late juncture can achieve nothing other than disruption and confusion.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% (Excluding Martyrs Lane Site) of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed. The conditions attached to the latest planning approval at the McLaren site west of the A320 (PLAN/2014/1297) presented a change in circumstance to justify the Martyrs Lane consultation. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding.

**Contributor Reference:** 00196/1/001  
**Customer Name:** Ms Sonia Appleby

**Summary of representation:**

Objects to consideration of Green Belt land for housing development. Development at land to the east of Martyrs Lane will exacerbate levels of traffic and air pollution for existing residents. Lack of infrastructure provision to support new and existing housing development.

**Officer Response:**

Justification for releasing Green Belt land for development to meet future housing need is set out in Section 1 of the Regulation 18 Consultation Issues and Matters Topic Paper.

The traffic and infrastructure implications of the proposal are addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Summary of representation:**

Objects to the proposal

Without road improvements and public transport, the proposal will create more traffic and public facility problems

Impact of congestion on the A320 and M25

Need to retain green spaces, should use brownfield sites, offices are empty and affordable homes in the town centre

Woking is becoming an ugly place to live losing all its green areas. The comments from the Chief Executive to suggest we move will be taken up.

Lack of infrastructure

**Officer Response:**

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses these issues raised in detail, including:

- Transport impacts, including on A320 and M25, and how mitigation measures would be required;
- Infrastructure provision to support development.
- Public transport

It is not correct that the Council have not comprehensively assessed brownfield sites as part of the evidence to inform the Site Allocations DPD. The Council has published detailed information on previously developed land (brownfield land) that is suitable, available and achievable for housing and employment purposes. This is contained in the Strategic Housing Land Availability Assessment (SHLAA) (2015), the Employment Land Review (2009) and Employment Topic Paper (2015). The documents are on the Council's website at [www.woking.gov.uk](http://www.woking.gov.uk). The Council has also carried out and published a Sustainability Appraisal Report that assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives, including environmental, social and economic objectives. The available evidence on previously developed land is sufficiently comprehensive and robust enough to enable informed decisions about the preferred sites being proposed for allocation in the DPD. The evidence also demonstrates that the preferred sites are the most sustainable when compared against other alternative sites. It is important to highlight that there is no presumption that land which is previously developed is necessarily suitable for residential development. Officers will consider any other sites that will be suggested for consideration in response to the Regulations 18 and 19 consultations on the DPD.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation to leave the local area, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Customer Name:** Ms Amanda Morrison

**Summary of representation:**

The Martyrs Lane site should not be substituted for the other site. The original consultation objection responses regarding the Pyrford site proposal were adequately discharged by the Planners' commentary to each objection.

The impact of surrounding sites such as the Surrey Heath Garden Village development and building on both Martyrs Lane and Fair Oaks will result in unacceptable pressure on all roads leading into/out of Woking. The potential to build East of Martyr's Lane will do this alone without the added impact of Fair Oaks. The local infrastructure cannot support such a large-scale development.

This particular site allocation is not part of the Woking Development Plan that has already forecast the needs of the Borough and the necessary sites to achieve this. The loss of the Green Belt, ancient woodland and endangering wildlife which are all important to Woking and maintaining development within a controlled boundary.

**Officer Response:**

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council has adopted the community infrastructure levy (CIL) as the primary means for securing developer contributions towards strategic infrastructure provision. The levy is set at a rate that will not undermine development viability. A viability assessment has been carried out to demonstrate that residential development across the borough will achieve positive viability. Officers accept that the CIL Charging Schedule will continue to be reviewed in future to take into account new information. Nevertheless, it is not envisaged that the levy will be set at a level that will undermine development viability.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites. However, it has always been very clear to the Council that infrastructure funding has never been and cannot be met entirely by developer contributions. Public sector contributions have and will always be a significant part of infrastructure funding, and the Council works tirelessly with relevant agencies to secure public sector and other sources of funding for infrastructure projects. For example, the CIL Charging Schedule identifies the priority infrastructure to support the delivery of the Core Strategy, how much it will cost, how much of the funding will met from developer contributions and how much is expected to be secured from public sector sources. This gives an indication of the scale of public sector funding expected to help deliver the identified infrastructure.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of the loss of the Green Belt, the Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

In terms of the ancient woodlands and wildlife, the Council is aware of the existing designated Ancient Woodland towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. The nature and type of some of the surveys that will be required to accompany any development proposals are set out in Section 9 above. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The site would have been designated as SPA by Natural England if any presence of Dartford Warbler and Nightjar were significant enough to justify designation.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

The Council accepts that it has not carried out a detailed ecological assessment of the site, and recognises the importance for doing so. However, the appropriate time to undertake such a

study would be at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

**Customer Name:** Mr Ian McVeigh

**Summary of representation:**

It is better to have all the new development, supporting services, infrastructure contained and rolled out within one area rather than a number of smaller sites across the borough.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 00158/3/001  
**Customer Name:** Mr Jonathan Cottam

**Summary of representation:**

The new McLaren New town proposal is a disgrace. The council should be protecting the area not harming it.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Key issues and matters Paper.

**Customer Name:** Mr Clive Lowe

**Summary of representation:**

Byfleet, Mayford and Pyrford should be saved from further development as they are already very heavily populated.

The Martyrs Lane site is sparsely populated in comparison and could easily accept many more new homes, people and traffic which would have less impact on the existing infrastructure.

**Officer Response:**

Support is noted. In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of roads and traffic, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Ms Stacey Hesketh

**Summary of representation:**

The area cannot cope with the additional housing, the local traffic is already congested and flooding around the area would increase with the additional houses.

**Officer Response:**

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

In terms of local traffic, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is

would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of flooding, Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land

east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Based on the above, it is not envisaged that the occupants of the development on the site would face unacceptable risk of flooding. Insurance of properties that could be developed on the site would not be adversely affected and the development of the site would not exacerbate flood risk elsewhere.

**Customer Name:** Mr Stephen Hart

**Summary of representation:**

There is insufficient resources and infrastructure to support more housing. The area is already congested. The local welfare system is already under resourced and overstretched and cannot cope with additional housing and increase in population. Green Belt needs to be maintained and protected.

**Officer Response:**

In terms of infrastructure, local welfare system and resources to support more housing, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council has adopted the community infrastructure levy (CIL) as the primary means for securing developer contributions towards strategic infrastructure provision. The levy is set at a rate that will not undermine development viability. A viability assessment has been carried out to demonstrate that residential development across the borough will achieve positive viability. Officers accept that the CIL Charging Schedule will continue to be reviewed in future to take into account new information. Nevertheless, it is not envisaged that the levy will be set at a level that will undermine development viability.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

In terms of local congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various

development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of protection and maintenance of the Green Belt, the Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs. In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of protection and maintenance of the Green Belt, the Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Contributor Reference:** 00151/1/001  
**Customer Name:** Mr Stephen Twilley

**Summary of representation:**

The land east of Martyrs Lane is much more suitable. The need to upgrade the road transport infrastructure and provide adequate additional infrastructure (e.g., education, health) will still have to be addressed. This site should have been considered before looking at Pyrford and Byfleet.

**Officer Response:**

Support for the site is noted and the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable.

Parts of the Martyrs Lane site had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) and were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was overlooked.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the

residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

In terms of roads, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 00153/1/001  
**Customer Name:** Ms Wendy Hennessy

**Summary of representation:**

There are existing traffic problems along Woodham Lane and the Six crossroads roundabout and this will increase if the land east of Martyrs Lane is considered for development. The increase in population will impact the local GP Practices, Woking Community Hospital and St Peters Hospital. It would become unmanageable.

**Officer Response:**

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of infrastructure support, in particular GP practices, the community hospital and St Peters Hospital, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council has adopted the community infrastructure levy (CIL) as the primary means for securing developer contributions towards strategic infrastructure provision. The levy is set at a rate that will not undermine development viability. A viability assessment has been carried out to demonstrate that residential development across the borough will achieve positive viability. Officers accept that the CIL Charging Schedule will continue to be reviewed in future to take into account new information. Nevertheless, it is not envisaged that the levy will be set at a level that will undermine development viability.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites.

**Contributor Reference:** 00136/1/001  
**Customer Name:** Ms Lucy Thomas

**Summary of representation:**

The existing infrastructure would not be able to support the development, including roads, healthcare and education provision. The development would have a serious detrimental impact on Woodham and West Byfleet area.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

In terms of road congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

**Summary of representation:**

Development should be within the existing built up areas. The Martyrs Lane site would be a stand alone site and would be distant from existing amenities requiring people living there to drive to get to shops and schools etc.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of travelling, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation regarding built up areas, the Council has looked at brownfield sites, this has been fully addressed in the Regulation 18 Consultation Issues and Matters Topic Paper.

In terms of school provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 00120/3/001  
**Customer Name:** Ms Nicola Glen

**Summary of representation:**

The A320, six cross roundabout and M25 are at traffic capacity. The A320 is often closed for repair works, especially water mains.

Natural resources are already under severe pressure and the erection of so many dwellings will lead to further stress on water availability.

We need green spaces! The UK has the least woodland in the whole of Europe, we need to rethink priorities and start protecting our natural environment. Protect the woodlands and the species within.

**Officer Response:**

The representations regarding traffic impacts, Ancient Woodlands and protection of wildlife have been addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Whilst the Council has been working with the County Highways Authority to identify the impact of the proposed safeguarded sites on the local road network, it is recognised that the allocation of the Martyrs Lane site could impact Junction 11 of the M25. Should the Council be minded to allocate the site for future development needs, the Council is committed to working with Highways England and the County Highways Authority to address any local and/or strategic highway matters.

In addition, Affinity Water (Veolia Water) had confirmed that based on the projected growth in the Core Strategy there is no risk to the supply of water over the plan period. The Council will continue to work with infrastructure providers and utility service providers to ensure that the necessary infrastructure is in place to serve development beyond the plan period (2027 onwards).

The Core Strategy and the Development Management Policies DPD contain robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

**Summary of representation:**

The infrastructure can not support this number of houses, including the road network, healthcare facilities and education provision.

The existing trains are at capacity and the station layout is chaos.

The development will destroy the balance between housing and woodland, impacting local character and wildlife.

**Officer Response:**

Most of these issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

In addition as part of the Regulation 18 version of the Site Allocations DPD (2015), the Council identified Woking railway station for significant infrastructure works to improve the connectivity of the station with the wider area and other modes of transport. This is identified as site UA23 in the DPD.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. It is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Summary of representation:**

Objects to the principle of Green Belt development. All of the safeguarded sites are floodplains or areas of outstanding natural importance. The Council continually state that it will protect Green Belt land.

None of the proposed sites have good infrastructure provision, including road networks and education and healthcare facilities. Any costs to improve or create new infrastructure will make development unviable.

Development of these sites would require the loss of hundreds of mature and healthy trees which are important to reduce flood risk. The loss of trees would increase flood risk on site and locally. The Council would be responsible for any damage caused by flooding.

Trees also absorb CO<sub>2</sub> and the loss of trees would have an adverse impact on air quality and in turn the quality of life for residents.

Development would have an adverse impact on the wildlife enjoyed by residents.

There is no evidence to demonstrate that more housing is required.

Green Belt land is also important for agriculture and local food production.

**Officer Response:**

The Council's response to the representation regarding the principle of Green Belt development and the need to safeguard land for future development needs has been addressed previously in the 'Site Allocations DPD Issues and Matters Topic Paper'. In particular, Sections 1.0 and 2.0.

In addition, the representations regarding flooding, landscape and infrastructure have also been addressed in the Regulation 18 Consultation Issues and Matters Topic Paper. Please refer to Sections 3.0, 5.0 and 7.0 respectively.

Regarding the Martyrs Lane site in particular, the Council has addressed the representations relating to infrastructure provision, flooding, wildlife and Ancient Woodland in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council is fully committed to the comprehensive delivery of the Core Strategy which sets out that at least 4964 net additional dwellings will be delivered over the plan period. The Core Strategy is based on a number of evidence base documents including the Strategic Housing Land Availability Assessment and the Strategic Housing Market Assessment. The full list of

evidence base studies used to justify the Core Strategy is at Appendix 1 of the Core Strategy. A number of these documents have also been reviewed since the adoption of the Core Strategy to ensure that the Site Allocations DPD is based on up to date and robust evidence.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The proposed safeguarded sites are not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that these particular sites are of low soil quality.

**Summary of representation:**

The proposal is wrong for many reasons. If it is not already then it should be designated as Green Belt.

The local infrastructure is already at capacity or in poor condition such as the road network and water supplies. There has also been a loss of schools and healthcare provision recently. Woking Town Centre and West Byfleet have already delivered significant housing towards national requirements.

**Officer Response:**

The site is already within the Green Belt. The purpose of the consultation is to determine whether this site is a suitable and sustainable alternative to be removed from Green Belt for future development needs compared with the six sites identified in the draft Site Allocations DPD (2015). The Council's Core Strategy, adopted in 2012, sets out that at least 4,964 new dwellings will be delivered across the Borough up to 2027. The Council is fully committed to delivering the Core Strategy in full. As part of the Site Allocations DPD process, the Council is also taking account of national planning policy (NPPF) to identify and safeguard land for future development needs.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan. These studies are reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council has adopted the community infrastructure levy as the primary means for securing developer contributions towards strategic infrastructure provision. The levy is set at a rate that will not undermine development viability. A viability assessment has been carried out to demonstrate that residential development across the borough will achieve positive viability. Officers accept that the CIL Charging Schedule will continue to be reviewed in future to take into account new information. Nevertheless, it is not envisaged that the levy will be set at a level that will undermine development viability.

The Council's Infrastructure Delivery Plan and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites. However, it has always been very clear to the Council that infrastructure funding has never been and cannot be met entirely by developer contributions. Public sector contributions has and will always be a significant part of infrastructure funding, and the Council works tirelessly with relevant agencies to secure public sector and other sources of funding for infrastructure projects. For example, the CIL Charging Schedule identifies the priority infrastructure to support the delivery of the Core Strategy, how much they will cost, how much of the funding will met from developer contributions and how much is expected to be secured from public sector sources. This gives an indication of the scale of public sector funding expected to help deliver the identified infrastructure.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport providers for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

**Customer Name:** Mr Richard Grimmett

**Summary of representation:**

The provision of housing is based on supply and demand. By stopping net immigration then fewer houses are required and will prevent over-development of the local area.

**Officer Response:**

The Core Strategy makes provision for at least 4964 net additional dwellings across the Borough over the Plan period. The Council is fully committed to the comprehensive delivery of the Core Strategy and is therefore preparing the Site Allocations DPD to identify specific sites to facilitate this development.

Based on national planning policy requirements, the Council is also looking to safeguard land for future development needs between 2027 and 2040. This land will only be released for development following a review of the Core Strategy and or the Site Allocations DPD. During this review, the Council will consider population trends and projections in calculating its future housing requirements.

It should be noted that immigration policy is not set at a local level.

**Contributor Reference:** 00033/1/001  
**Customer Name:** Ms Kate Gulliver

**Summary of representation:**

Support for the Martyrs Lane site as it is derelict and would enable a new community to be developed. Development could not be supported in Pyrford.

**Officer Response:**

Support and merits of the site noted. This will weigh in the balance of considerations by Members.

The Council notes the representation outlining reasons against safeguarding land for future development needs in other areas of the Borough. This will be taken into account to inform the preferred approach to safeguarding.

Further details can be found in Officers' Response to the Regulation 18 Site Allocations DPD consultation.

**Contributor Reference:** 00034/1/001  
**Customer Name:** Ms Maggie Howe

**Summary of representation:**

Support for the site but development should consider how to protect Horsell Common from an increase in dog walkers and recreational users

**Officer Response:**

Support for the site is noted.

The Council is aware of local ecological sites such as the Thames Basin Heaths SPA. As stated in the Consultation Paper, the Council would require any future development of the site to bring forward the necessary infrastructure to support the site. This includes green infrastructure. Therefore whilst the site is in close proximity to Horsell Common, the provision of on-site green infrastructure as well as SANGs across the Borough should mitigate any potential adverse ecological impacts.

**Contributor Reference:** 00048/1/001

**Customer Name:** Mr Dave Hall

**Summary of representation:**

Objects to all of the proposed safeguarding options. The development of these sites will cause chaos based on the existing infrastructure provision.

The only way to relive pressure on overcrowded areas is by creating new towns and villages. Wisley Airfield is not such a bad idea alongside Dunsfold. These would enable modern infrastructures, new schools & health facilities as well as good access to all amenities & in turn would mean the existing areas will thrive with a healthy environment.

Redeveloping Milford would make sense with well thought out infrastructure and open space to create a town with excellent facilities. 2000 homes west of Guildford is crazy based on traffic congestion.

The Sheerwater Regeneration Scheme makes sense.

The road networks such as the M25, A3 and M3 have major issues already. The new plans for the A3 Painshill intersection are excellent.

However housing is in a shocking situation and government should force developers to deliver housing within a reasonable time frame from the point permission is granted.

It takes longer to get to work and school and affects the quality of life and well being of residents. The pressure on existing services should be relieved to encourage a better quality of life. Development proposals cause local anguish and anger and result in less green space, more traffic and construction disruption including traffic, noise and air pollution. In turn this puts further pressure on the health service.

These proposals will not solve the housing problem and will make things worse.

Housing with insufficient parking adds to the problem. There is a lack of developer and Council understanding and too much emphasis on maximizing the number of houses over functional homes and the environment. Modern day society is failing putting more pressure on everyone.

Land owners, despite a housing shortage, are able to sell land with planning permission for huge financial gains whilst developers and individuals are unable to purchase land and develop it viably. This is extortion. By changing this it would free up land for development.

Ransom strips should be abolished or a standardised methodology brought in to calculate land costs. Once planning permission is granted there should be no further costs later in the

process by landowners increasing land prices. If overage rights aren't allowed then it would free up hundreds of plots for self-builders & developers to build on.

Smart thinking is required to house a large population on a small island.

The safeguarding proposals are narrow minded and grasping at straws. New towns & Villages with modern infrastructure & facilities is the only way to prevent England from becoming one massive city.

**Officer Response:**

Objection to the proposed safeguarded sites is noted.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Whilst the Council notes the support for Wisley Airfield, Dunsfold and Milford, it should be noted that these sites are not located within Woking Borough. The Council is fully committed to the comprehensive delivery of the Woking Core Strategy which seeks to facilitate the delivery of 4964 dwellings over the plan period up to 2027. Most of these sites are located within the existing urban areas of the borough, namely Woking town centre. In addition to this, the Site Allocations DPD seeks to safeguard land for future development needs between 2027 and 2040. By not allocating land for development within the borough, the Council will be unable to deliver the development needs of the borough which includes both private and affordable housing as well as economic and retail floorspace.

As part of the Site Allocations DPD process the Council considered about 125 sites in total. Based on the Council's evidence, including the Sustainability Appraisal, none of the alternative sites would be able to deliver a new town or village within the borough.

Regardless of the Council's preferred safeguarding strategy, the social and environmental implications of development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

Support for the Sheerwater Regeneration Scheme is noted. The site was included in the draft Site Allocations DPD which was published in 2015.

Regarding the existing road network, the Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Government has recently published the Housing White Paper: Fixing Our Broken Housing Market. Within this it suggests a number of measures to speed up the rate of development delivery. The consultation on the White Paper has now concluded and the outcome of the consultation is expected to be announced shortly.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has Parking Standards that future development should comply with. These standards are currently being updated by the Council to reflect national planning policy requirements. The Council also has design policies and guidance in place to ensure that future development is built to a high standard.

The representation regarding overage rights and ransom strips are not planning considerations as they are legal matters. Nevertheless, the Council could consider using its Compulsory Purchase Powers to acquire land if it facilitated the delivery of development. The Council has used these powers previously and will consider doing so again if necessary.

Based on the Council's existing planning policy requirements, it is satisfied that future development will be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is

satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Summary of representation:**

The following are the objections to your planned inclusion of the land to the east of Martyr's lane in the DPD, and removing this land from Greenbelt and safeguarding this for future development.

New homes should be sustainable within the borough without placing all of the burden on a single ward. Using several sites over the borough would be far more sustainable and have less overall impact on the borough infrastructure facilities.

1. The land east of Martyrs Lane makes an important contribution towards preventing urban sprawl. Safeguarding it for future development needs will lead to urban sprawl and the merging of settlements. This is highlighted by the Council's own evidence. There are no special circumstances to justify the release of the land from the Green Belt for development. The Council went against Green Belt guidance to grant planning permission for McLaren to develop the northern part of the land, and as such the non-implementation of the planning approval should not be used as justification for promoting residential development on the site. The proposal does not take into account significant proposed developments in adjoining boroughs such as the proposed Fair Oaks Garden village proposal in Surrey Heath Borough. Cumulatively, these developments will lead to urban sprawl.

2. The land has high risk of flooding and parts of it are in Flood Zones 2 and 3. There are real recorded incidences of flooding on the stretch of the A320 near the site. There are other areas within the Borough of lesser risk that could be developed. Development will exacerbate existing flood risk in the area, and the cost of mitigation would be significant enough to affect the viability of developing the entire land. In accordance with the NPPF, the development of the site will require a site specific flood risk assessment by reason of its scale. The risk of flooding could affect the insurance of properties.

3. The original proposals in the draft Regulation 18 Site Allocations DPD would distribute development traffic across the borough. The Martyrs Lane proposal will concentrate all the traffic impacts on one heavily congested area. There is lack of public transport in the area, the surrounding roads are already congested and the additional development will exacerbate the situation. Roads that will be severely affected are the A320, Martyrs Lane, Woodham Lane. This could have implications on operations at McLaren, on local residents and would increase pollution.

4. There is lack of public transport connectivity. Only two bus routes serve the area and one is about to be withdrawn. Trains are under severe strain and punctuality is terrible. South West Trains provide appalling service.

5. The area has not got a transport policy other than one that promotes a huge amount of car travel. This would lead to a judicial review of the Site Allocations DPD. The transport system needs to be balanced in favour of sustainable transport modes.
6. The A320 has experienced severe sink holes in the past few years. A strip of land to the north of the site is susceptible to collapse/subsidence due to piping and liquefaction.
7. The development of the site will not amount to sustainable development, contrary to the requirements of national planning policy.
8. The scale of the development will require major infrastructure of every conceivable type to support it. This will come at a significant cost that cannot all be borne by developers. It will also need significant public funding. The infrastructure needs of the development will need to be studied with appropriate consultation with the relevant providers. Residents might have to draw on infrastructure within other boroughs and there is no indication that those authorities have been consulted.
9. Most of the land has remained untouched for many years and is wildlife rich. There are protected species such as bats, owls, nightjar and Dartford warbler on the land. There has not been any formal study to assess the ecological significance of the site.
10. The site contains an area of Ancient Woodland, which is likely to have veteran trees. In accordance with Government policy, Ancient Woodland has to be protected. A survey has to be undertaken to assess whether any further areas would not be classified as Ancient Woodland. A lot of the trees on the site are subject to TPO.
11. The site will be under several flight paths due to the expansion of Heathrow and flights from Fair Oaks. It will not be suitable to live under the flightpaths by reason of noise and potential accidents.
12. The site includes a recycling centre that already generates significant traffic. There are also social and environmental reasons for not living near a recycling centre.
13. Canalside Ward will be the only Ward to be significantly developed. The development of the site would require the Council to use its compulsory purchase powers to acquire land. No Government minister will approve a Compulsory Purchase Order application as there are other better options. The Council is already financially stretched. The fact the Council is focusing all its development needs at a single location will be used as a reason for a judicial review.
14. The make up of the LDF Working Group is unrepresentative. The councillors on the Working Group are only from the south of the borough and are biased towards certain areas. The Group should be re-formed to make it much more representative. The decision of the Group was based on 'not in my backyard' mentality.

15. Many parts of the land will not be available for development. The owners of the New Zealand Golf Course have openly confirmed that their land will not be available for development as envisaged by the Council. Potentially, the land in the ownership of McLaren will also not be available for the proposed development. The Council via a Councillor has stated that the whole proposal is a waste of time, effort and public money.

16. The proposed Martyrs Lane development would go against the values set out in the Natural Woking Strategy.

17. The Landscape Assessment by Hankinson Duckett Associates concludes that this land is not suitable for development.

18. Other issues including the history of the golf club, poor mobile phone and broadband connectivity and the impact on neighbouring boroughs.

Appendix attached.

**Summary of representation:**

Supports the draft allocation as it would cause less disruption to existing residents of the Borough. As a building protect it would also be more efficient than a piecemeal approach.

**Officer Response:**

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Nigel Oliver

**Summary of representation:**

The proposed site is well served by the existing road network and is capable of taking additional traffic, unlike the sites identified in Saunders Lane.

One fifth of the site has already been granted planning permission for a Technology Centre and therefore its removal from the Green Belt is not an issue.

The site is adjacent to locally listed buildings but there are no statutory listed buildings unlike Saunders Lane.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and

- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Regarding the representation on heritage assets, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

**Summary of representation:**

The consultation process is unfair as vested interests will be heavily balanced on one side.

Mixed views on the proposal. Better to spread development across the Borough but the site does benefit from transport connections to the A320 and M25.

**Officer Response:**

It is important to emphasise that the decision to consult on the possibility of safeguarding the land east of Martyrs Lane was made by a vote of Full Council. The decision of what site(s) to include within the Regulation 19 version of the Site Allocations DPD will also be made by a vote of the Full Council.

For the Site Allocations DPD to be found sound, the Council has to identify the most sustainable land to meet its future development needs. This must be the most sustainable when compared with all other reasonable alternatives. A number of studies have been undertaken to enable the Council to make an informed decision on this matter. The spatial distribution of development is therefore driven by sustainability and not by ward boundaries.

The merits of the site as set out in the representation are noted and will weigh in the balance of considerations by Members.
