

## **Woking Local Development Documents**

**Site Allocations Development Plan Document (DPD) –**

**Officer summary and response to  
'Land to the east of Martyrs Lane' consultation**

September 2018

**Produced by the Planning Policy Team  
For further information please contact:  
Planning Policy Team, Woking Borough Council, Civic Offices, Gloucester Square,  
Woking, Surrey, GU21 6YL.  
Tel: 01483 743871. Email: [planning.policy@woking.gov.uk](mailto:planning.policy@woking.gov.uk)**

As part of the Land to the east of Martyrs Lane consultation process, the Planning Policy Team has published the representations received during the consultation on its website. Please visit [www.woking2027.info/allocations](http://www.woking2027.info/allocations) to view the original representations. It should be noted that personal and sensitive information such as personal email addresses and telephone numbers have been removed.

All of the representations received during the consultation period have been summarised by officers and responded to. To locate the officer's summary and response to your representation, please see the contents list on the following pages. This has been set out in alphabetical order by surname. Any representations received containing no surname are listed at the end of the list.

A number of the officer summaries and responses refer to other Council documents. These documents can be found online and include:

- Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper
- Regulation 18 consultation Issues and Matters Topic Paper
- Duty to Cooperate Bodies Topic Paper
- Land to the east of Martyrs Lane Consultation Document
- Sustainability Appraisal

For quick reference, Table 1 below sets out the representations received from statutory consultees and other key stakeholders and organisations, including landowners within the Martyrs Lane site boundary.

**Table 1: Statutory consultees and other key stakeholders and organisations.**

<b>Surname / Organisation</b>	<b>Page Number</b>	<b>Consultee Type</b>

If you have any difficulties locating a representation, the officer response or any of the associated Topic Papers then please contact the Planning Policy Team at [planning.policy@woking.gov.uk](mailto:planning.policy@woking.gov.uk) or on 01483 743871.

## Officer summary and response

**Contributor Reference:** 01871/1/001  
**Customer Name:** Mr Roland Sperryn-Jones

**Summary of representation:**

Objects to the proposal.

1. The proposal has been sprung on Woodham with no prior warning and at the last moment prior to a Council meeting. Questions whether it is a lawful process. This is one of the few areas without a neighbourhood forum. There are sites which should be development first e.g. in Pyrford and West Byfleet. The new site is simply inappropriate.

2. Recognises the need to build houses, but they have to be in the most appropriate locations. Woodham is Green Belt, has ancient woodland and is adjacent to Horsell Common. There are other more appropriate areas.

3. The proposed development site is immediately adjacent to the waste disposal in Martyrs Lane – not the best place to build new homes.

4. There are serious infrastructure problems which are unlikely to be addressed by developers. Developers will squeeze in far more housing units than they have permission for, which will cause an unacceptable level of urbanisation with 'developed creep' along Woodham Lane to Addlestone.

5. The A320 and A245 are the two major A roads bisecting the Borough. They are already unacceptably congested and a few thousand more cars exiting on to them will make the situation worse. The proposed development would need to exit on to both of these roads at some point.

6. Going North on the A320 is the main route for the majority of Woking residents to reach St Peters Hospital and the M25. The A245 runs from Chobham, through the Six Cross Roads, West Byfleet, Byfleet, Brooklands to the A3 at Cobham; both these routes are already congested without adding to the problems.

7. The mini-roundabout on the A245 near the entry to the New Zealand is already identified by SCC as one of the most congested in the County before including additional traffic from the development proposal.

7. The destruction of New Zealand Golf Course would be barbaric and vandalism. It has national repute as one of the oldest clubs in the area. The loss of a club such as Traditions in Pyrford would have limited impact.

8. There is a lack of infrastructure in relation to schools, GP surgeries and public transport (buses).

9. There will likely be impacts on train capacity from West Byfleet and Woking stations into London, with more people standing on trains and using inadequate parking facilities.

**Officer Response:**

Objections are noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses some of the issues raised in the representation in detail, including the importance of the Green Belt at this location and the possibility that development will lead to urban sprawl, the traffic impacts (including on the A320 and A245); public transport infrastructure, provision of other necessary social, physical and green infrastructure, impacts on ancient woodland, implications of the recycling centre being located on the site, justification for consulting on Martyrs Lane site as a reasonable alternative site to meet future development needs and how the decision of the LDF Working Group and full Council was reached.

The decision to consult on the option of land to the east of Martyrs Lane as a reasonable alternative is a legitimate one and there is evidence to justify its consideration. Paragraph 182 of the NPPF deals with the examination of Local Plans. It stresses that to be found sound, a Local Plan amongst other things must be justified. The plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. It would have been irresponsible of the Council if it did not at least consider this as a reasonable alternative in the light of the changing circumstances regarding the part of the land in the ownership of McLaren which occurred after the Regulation 18 consultation. The Local Development Framework Working Group gave clear reasons why the land should be identified for consultation. This is documented and is on the Council's website.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The New Zealand Golf Course was included in the proposal as any development of the northern parts of the site alone would result in an unconnected area of development away from the main urban area of the Borough. The Council acknowledges that any future development on land to the east of Martyrs Lane may result in the loss of recreational open space (i.e. the golf course). It should be noted that planning policy in the Core Strategy permits the loss of open space where it can be demonstrated that an alternative and equivalent or better provision is

made available in the vicinity, or the development is directly related to the enhancement of the open space. Any planning application coming forward for development at the site would need to take this into account. As part of this consultation, Sport England has been consulted on the proposal and their representation and the Council's response can be accessed for further information.

It should also be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

There have not been any surveys carried out specifically addressing the likely impact on train capacity at Woking or West Byfleet stations, or impacts on parking facilities. The Council is updating its Infrastructure Delivery Plan to support the preparation of the Site Allocations DPD, and Officers are working with infrastructure providers, including train operators, to determine the likely impact of site allocations on future capacity. This work is ongoing.

**Customer Name:** Rae Robbins

### **Summary of representation:**

Contacted as a member of the Citizens' Panel to give views. Strongly objects to the proposal due to impacts on environment in terms of ecology and community.

It seems odd that professional conclusions accepted last year should now be questioned. Councillors must decide on the most suitable, sustainable and deliverable sites based on objective criteria.

A map is enclosed showing proposed developments on this site, Fair Oaks, Brox Lane, the Veterinary Establishment land, the land to the north of the A317 and the Longcross site. All of these proposals together lead to urban sprawl and contribute towards towns merging. The definition of sprawl is 'to spread stragglingly'. The Martyrs Lane development would be cut off from Woking by the A320 and A245; it breaks the very obvious Green Belt boundary – a sensible and defensible boundary. The originally proposed sites are additions to existing settlements rather than new, separate housing areas. The proposals in Mayford seem to add to the rather linear but successful community in a logical fashion.

It is incomprehensible that the Council and Surrey Heath Council seem intent on ruining the Horsell Common SPA habitats and evicting its Nightjars and Dartford Warbler. The proposed SANGS will not stop a large number of additional walkers and their dogs from using the Common and disturbing these birds' nests. Policy NRM6 makes it clear that priority should be to direct development to areas where adverse impacts on the SPA can be avoided; and then to mitigate any impacts. Policy CS7 lauds green corridors as paths for migrating species – the River Bourne is an example, and would be compromised by development on this land.

A new settlement here should not have its own doctors' surgery; the whole future of the NHS is for bigger practices with wider competencies. Existing facilities are not easily reached from the site. A new school may be needed but within a generation the demand will drop and the school will not be easily accessed for use from other outlying areas except by car. The original proposals have better access via foot or bike to neighbourhood centres; the Mayford ones less so but perhaps the retail provision here would be expanded to some extent.

There would be traffic problems. The 2015 Surrey Infrastructure Study identified two congestion black spots: one was Six Crossroads roundabout and the other the A320 to the north. Another 2/3000 houses here will add to congestion causing more delays, including on the A245. Whilst in the originally proposed sites, a more modest level of additional housing will add to these black spots.

The Golf Course has stated its land is not available for development, whereas the owners of originally proposed sites are willing to accept development.

Any application to develop the land east of Martyrs Lane will require substantial, expensive research into wildlife, flooding, contaminated land and subsoil stability before any building could be permitted. The cost and risk burden for any developer must therefore be much greater than with the other sites.

Understands the need for more housing, but the site is not suitable, sustainable or deliverable. Even the Hankinson Duckett report concludes it is of critical importance to the Green Belt. It is therefore hard to see how this site should be given priority over the other sites.

#### **Officer Response:**

Objection is noted and the points raised in the representation will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the concerns raised in detail, including:

- conclusions from the Green Belt boundary review and Hankinson Duckett Landscape assessment into contribution of the land towards Green Belt purposes such as urban sprawl and towns merging (Officers accept that the conclusions of the studies are sufficiently clear to demonstrate development would lead to urban sprawl and an incursion into the Green Belt, and this is before nearby proposals such as Fairoaks are taken into account);
- the reasons why earlier recommendations by Officers are being questioned by the Council due to a change in circumstances with the land in ownership of McLaren;
- impacts on wildlife and how it is recognised that policy CS7 of the Core Strategy protects and enhances biodiversity assets and features such as green corridors;
- how development of the site would not compromise the Thames Basin Heaths SPA and how it would comply with policy NRM6;
- the sustainability of developing the site, including availability of public transport infrastructure and provision of other infrastructure services such as schools and health facilities;
- the traffic implications of the proposal (of 1,200 houses) and the original proposals on the A320 and A245, taking into account conclusions from Transport Assessments and other evidence including the Surrey Infrastructure Study;
- the availability of the land for development, and deliverability;
- the need for an extensive ecological survey, and other assessments, to be made requirements of any development proposal on the site that would come forward for determination.

Section 10 of the Duty to Cooperate Consultation Bodies Topic Paper also provides further detail on the potential for urban sprawl and merging of towns.

Should the Martyrs Lane site be safeguarded for future development, the Consultation Paper sets out how a new strong, defensible Green Belt boundary could be drawn. This is not therefore considered to be an obstacle to potential development at the site. Some points raised in the representation, however, are noted, including the separation of the site from the

main urban area by the A320 and A245 in contrast to the originally proposed sites which are considered to be additions to existing settlements. However, this in itself presents merits such as the opportunity to create a new community with its own infrastructure and local economy. Officers do not necessarily agree that a new settlement at the site should not have its own facilities. Officers would take advice from the relevant infrastructure providers such as Surrey County Council regarding the capacity of surrounding infrastructure, and the need for new infrastructure. SCC has indeed responded to this consultation advising that a new primary school would be likely (see Section 13 of the Duty to Cooperate Consultations Bodies Topic Paper). Population demographics of new communities are complex, but it is likely that families will come and go in a similar vein to other areas of the Borough, thus maintaining a steady demand for local facilities. It is, however, true to say that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has received a representation from Natural England and Horsell Common Preservation Society regarding the Thames Basin Heaths SPA and has responded accordingly. The responses are available to view for further information. In summary, the Council does not accept that the development of the site would compromise the overall integrity of the nearby Thames Basin Heaths SPA and its ecological integrity and the ecology of the wider area. The site can be developed to comply with the requirements of Policies NRM6 of the South East Plan and CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy. Natural England does not have any objection in principle to the proposal, subject to the appropriate measures of mitigation being agreed. This matter has been addressed in detail in the Officer's response to the other representations made by Horsell Common Preservation Society. There is no proven functional linkage between the SPA and the site, which is of such significance to prevent the development of the site.

**Contributor Reference:** 02636/1/001

**Customer Name:** Mrs J McKay

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02959/1/001

**Customer Name:** Mr Nigel Guy

### **Summary of representation:**

Martyrs Lane site is a far preferable site because:

1. gives the development critical mass and can comfortably accommodate 1200 houses, including affordable housing, together with the attendant infrastructure. Many development and planning advantages in creating a single, new, larger housing development, rather than dispersed smaller ones. This also makes it more economically viable to develop the attendant community infrastructure.
2. Proximity to major road north of Woking with good access to M25 and Woking Town Centre, and good public transport and cycle routes exist here. Scope to widen A320.
3. Proximity of major employers nearby, which would benefit from adjacent housing.
4. Land north of golf course was intended to have been developed by McLaren, and is largely redundant. Gives a presumption for development. It also has no national or local landscape designation.

### **Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications.

The Council has the resources and expertise to determine planning applications for single or multiple sites, and development of a single site would not necessarily simplify the process for obtaining planning permission.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. Parcels of land north of the golf course were assessed as part of the Site Allocations DPD process, and ruled out as their development would lead to isolated development in the Green Belt (see paragraph 3.5.11 of Peter Brett's Green Belt Boundary Review report). It is accepted that the Martyrs Lane site does not contain landscape constraints such as those designated under policy CS24 of the Core Strategy (i.e. 'escarpment and rising ground of landscape importance'), but it does contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

**Contributor Reference:** 02611/1/001  
**Customer Name:** Ms Hilary Dennett

**Summary of representation:**

- 1) Removal of Green Belt
- 2) Urban Sprawl
- 4) Road congestion – bad enough already.
- 5) Lack of public transport to support this new town.
- 8) Wildlife (protected)
- 10) Woodland removal

I cannot think of a worse location for an additional 3,500 homes.

It is totally unsustainable.

**Officer Response:**

The Council's response to the issues raised can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

It should be noted that the proposed number of dwellings on the Martyrs Lane site is 1200, this was clearly stated in the consultation document. Therefore the representation is incorrect to state 3500 dwellings.

**Contributor Reference:** 03018/1/001  
**Customer Name:** Mr Geoff Geaves

### **Summary of representation:**

Whilst it is regrettable that Green Belt land has to be used, support for land east of Martyrs Lane to be substituted for the 6 original sites.

The land, east of Martyrs Lane, is in poor condition overall, whereas the sites in Pyrford are in virgin Green Belt, is currently productively farmed and has been for centuries. It is understood that similar comments can be made for the land in Byfleet and Mayford.

Whilst the southern half of the Martyrs Lane site is occupied and attractively maintained by New Zealand Golf Course the adjacent land, to the north, is unused land owned by SCC, contains derelict army huts and the Sports Club no longer functions. Both the SCC site and the Army Camp site were offered up in the latest SHLAA process but ignored.

The northernmost plot is owned by McLaren and until recently had planning permission for a 60,000 sq. m factory. This plot therefore establishes a recent precedent for development.

The Northern half of the Martyrs Lane Site has the Required Capacity for 1024 Dwellings to be developed and substitute the requirement by the original 6 sites.

### **Building on NZGC is Not Necessary**

Permanent and Defensible boundary to be drawn around a site in Martyrs Lane without taking New Zealand Golf Course out of Green Belt.

Consultants employed by Pyrford Neighbourhood Forum hold the view that the arguments put up by WBC consultants do not support the conclusion that the Martyrs Lane site is of 'critical importance' to the Green Belt.

**Green Belt Constraint** The WBC Green Belt Review by PBA concluded that that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt whereas the Martyrs Lane site was rated as low suitability. Based on this category of evaluation Martyrs Lane should have been selected ahead of the land in Pyrford.

**Sustainability Constraint – Martyrs Lane over Pyrford Land.** Sustainability has been reviewed by PBA, HDA and the Council itself in processing the McLaren planning application. Martyrs Lane was ranked 2nd in sustainability whereas Pyrford land, is ranked only 18th. Thus on the sustainability criteria Martyrs Lane should have been selected ahead of Pyrford Land.

The Brett report concluded that Pyrford land should be classified in the Major Environmental Constraint category. The land is grade 3 agricultural land with some grade 2. The parcel is identified as adjacent to the 'Escarpment and Rising Ground of Landscape Importance' and

actually straddles the local highpoint of the escarpment close to Pyrford Court. The 'Escarpment and Rising Land of Landscape Importance' designation is protected in Woking Core Strategy CS24. By contrast Martyrs Lane falls into category Minor Constraint and should therefore be preferred for safeguarded development land ahead of the Pyrford fields.

There is a degree of agreement between the various reports into landscape character and sensitivity to change. PBA categorised Pyrford land as falling between little or no capacity for change and low capacity for change whereas Martyrs Lane was broadly classified as entirely within the low capacity for change category.

In addition Pyrford land enjoys a rural feel from the network of public rights of way adjacent to the enclosed farmland include as the Pyrford sites. In contrast the Martyrs Lane site is largely inaccessible to the public and has no landscape designations.

Amenity and Heritage Green Belt land in Pyrford is very accessible by a network of public rights of way. The area is actively used by walkers, runners, cyclists and others from all across the Borough. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public despite it's Green Belt status.

The Pyrford Green Belt is an irreplaceable asset and has several conservation areas. The Surrey Landscape Character Assessment describes some of the heritage features of land adjacent to the Pyrford fields. The two Pyrford fields are integral to the heritage setting of the area. Martyrs Lane has limited public footpaths through the area and has no known heritage value. It

Economic and Social Benefit Economies of Scale – One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure issues like water, waste, and electricity when compared with the provision of equal services on 6 separate sites spread across the whole borough.

Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by 6 separate sites.

Affordable homes – land values in Martyrs Lane are less than the 6 original sites proposed and this will enable the provision of more Affordable Housing.

Employment – There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. Each needs affordable housing for its employees who work shifts. Housing in Pyrford is expensive.

Summary information compiled from the Surrey County Council (SCC) traffic reports suggest Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main A road links – Chertsey Road to Woking and in the other direction Chertsey and the M25. In addition, Woodham Lane provides access to Addlestone, Sheerwater and West Byfleet.

Pyrford & West Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is close to capacity and widening these roads would be both difficult and ruin the character of Pyrford and West Byfleet.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to and from the A320. In contrast access to the 6 original sites is via minor roads and so Martyrs Lane should be preferred for its better traffic access.

The West Byfleet Health Centre is fully subscribed and more facilities will be required for the influx of people in over 1000 homes planned for Sheer House, Broad Oaks and West Hall before 2027. With the potential number of new and additional dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Schooling – Pyrford CofE Primary School is already full and has taken many pupils from the Maybury area, Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Martyr's Lane already has better bus services than other sites. McLaren also operate an employee bus service that could contribute to the development of enhanced services to accommodate 1024 dwellings at Martyrs Lane. Arranging adequate services at one site will be easier than to 6 sites dispersed widely across the Borough.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also

looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for

safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Green Belt boundary review report provides sufficient evidence that the release of the proposed allocated sites from the Green Belt will enable defensible boundary to be drawn that will endure over a long period of time beyond the Core Strategy period. At this stage it would be unreasonable to rule out the New Zealand Golf Course and draw a new boundary as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

The Pyrford Neighbourhood Forum consultant opinion is a matter of Planning judgement. The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close

to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Infrastructure Delivery Plan notes that at present there is adequate GP provision to meet overall demand in the Borough. Whilst this is the case, it is also accepted that there might be locally specific pressures of over subscription that needs to be addressed. Whilst traditionally health provision reacts to meet projected demand, the Council is seeking to work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

In terms of school provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provider for the area and its views on education will be seriously considered if the site is to be allocated. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of this site or any of the six sites if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

### **Summary of representation:**

Strongly agrees that the site to the East of Martyrs Lane should be substituted for the safeguarded sites (in Byfleet, Mayford and Pyrford) identified in the draft site allocations DPD to meet the long term future development needs of Woking Borough between 2027 and 2040 for the following reasons:

Site Capacity to build 1,024 dwellings. There is no need to build on NZGC in order to satisfy the requirement for these dwellings.

Previously Developed Site compared to the two fields in Pyrford have been farmed for centuries and have never been built upon. They provide the rural landscape essential to the semi-rural character of the area and are extensively used as a leisure facility, whereas the Martyrs Lane site is hardly if ever used.

the Martyrs Lane site was granted planning consent, was the base for 50 Nissen Huts for an Army Camp in WW2, and was used as emergency housing for about 5 years after WW2. Today this site north of the NZGC comprises unused, uncared for and semi-derelict facilities, and overgrown woodland.

The Martyrs Lane site can link straight onto the A 320 at the McLaren's roundabout. The sites in Pyrford & Byfleet are accessed by B or C roads with traffic flowing onto the A245. The A245 is already congested and this will only increase with the Broadoaks, West Hall and Sheer House in West Byfleet. Some traffic from the Pyrford field sites is likely to flow into the already congested and narrow streets of Ripley. On any objective basis, the Martyrs Lane site should result in less traffic congestion than the other 6 sites.

The Brett Woking Green Belt Report said these fields have very low suitability for removal from the green belt, and this category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and so should be selected, on this criteria, before the fields in Pyrford. The Pyrford land is in the category Major Environmental Constraint, classified as grade 3 agricultural with some grade 2 and is identified as an 'Escarpment and rising ground of Landscape importance': this designation is protected in Woking Core Strategy CS24, whereas Martyrs Lane falls into category Minor Constraint. These fields fall into two categories, namely little or no capacity for change and low capacity for change.

The Martyrs Lane site has no local or national landscape designations and has been partially developed in the past with both military and civilian accommodation. The Martyrs Lane site should therefore be selected for safeguarded development land before the Pyrford fields.

Infrastructure One larger site of 1,024 properties should provide an economy of scale, particularly when resolving infrastructure issues like water, waste, and electricity, compared

with the other 6 separate sites spread across the borough. Moreover the major water main on the adjacent A 320 is currently being renewed and is an added benefit for the Martyrs Lane site.

The disruption to residents and traffic of a single site should be significantly less during development than that at 6 separate sites.

The land value at the Martyrs Lane site is likely to be less than the 6 original sites suggested, and this should help provide affordable housing and key worker homes needed by employers such as McLaren's and St Peter's Hospital.

Martyrs Lane, could provide a new school and a health centre, relieving pressure on current resources at West Byfleet health centre and Pyrford School which are at capacity.

Martyr's lane has better bus services than other sites. Currently the 446 runs on Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford cease at around 18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Service. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services and arranging adequate services at one site will be easier than to several dispersed sites.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material

consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

**Customer Name:** Mr And Mrs J R Pain

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford ), to meet long term future development needs of the borough between 2027 and 2040

**Officer Response:**

Support noted

**Contributor Reference:** 02994/1/001  
**Customer Name:** Mr John Cotton

**Summary of representation:**

Objects to the development of the areas in and around Pyrford including, Upshot Lane, as the areas concerned are Green Belt and have many historical features as shown in the Draft Site Allocations Development Plan Document (DPD), as well as severe limitations in terms of Utilities and Road access, Schools and Health.

If there is a real need for 1024 houses in the area, then development north of New Zealand Golf Course in Martyrs Lane would be a preferred option. Major road access to this one site exists, and would be practical as it is close to major employers, such as McLaren and St. Peters Hospital as well as the M25.

New First School and Health Centre could be built to serve this new community and affordability would be better in what must be a cheaper area compared with Pyrford.

Agrees to this development for 1024 homes but not to 3000/3500 houses on the whole site including N.Z.G.C.

**Officer Response:**

Objection to building in Pyrford including Upshot Lane and support for the land to the east of Martyrs Lane is noted.

The Consultation Paper sets out how it is anticipated that the site would enable the delivery of at least 1,200 net additional homes. It is not intended for the delivery of 3000/3500 homes. Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02995/1/001  
**Customer Name:** Helen Latham

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Some of the Martyrs Lane site is on land which has been previously developed – which is not true of the other proposed sites.

Safeguarding one site for the future housing needs of Woking would probably mean "economies of scale" and would help to find solutions to many of the infrastructure concerns.

By contrast, as regards the two plots of land at Pyrford:

The A245 through West Byfleet & over the M25 bridge has virtually no capacity left, especially when other new development in the area is taken into account.

The Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough. This is not evidently the case for the Martyrs Lane land.

The Heritage features of the area which incorporates the two Pyrford fields includes the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.

The landscape in Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.

Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

The representation considers the land East of Martyrs Lane is more suitable than that near Pyrford for development, as it would have less impact on the landscape, however, would prefer no further major development in the area at all.

The Woking Roads are already over capacity and we do not evidently have the infrastructure in terms of schools, hospitals, etc, to take further new residents in the area.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is

specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 02996/1/001  
**Customer Name:** Mrs Carole Blackburn

**Summary of representation:**

The representation considers that Martyrs Lane will be the best choice as it will have the least impact on Woking overall because the land is a single site

it has been previously developed, is partially derelict and less than half is needed to meet the Borough requirements.

In contrast the fields in Upshot Lane are in Virgin Green Belt, have been productively farmed for centuries and used for amenity and are fundamental to the semi-rural character of the Local Pyrford Escarpment and the village of Pyrford.

As only 1024 houses are required there is no need to build on New Zealand Golf Club land

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the

amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

**Contributor Reference:** 02997/1/001

**Customer Name:** Mrs L Hannell

**Summary of representation:**

In favour of substituting the 6 sites in the draft Site Allocations DPD with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course.

A single site would provide some alleviation of current infrastructure issues that will arise building more homes, traffic etc..

Fewer residents would be impacted with one site than by 6 individual sites.

The cost of the land in this area, compared to Pyrford would be more reasonable and therefore provide an opportunity for affordable housing and also possibly an opportunity to provide some social housing.

This site is also close to three major employers, St Peter's Hospital, the Animal and Plant Health Agency and McLaren Technology Centre.

Pyrford Primary School whilst a new build, is full to capacity with less space for children. A new development in Martyrs Lane would provide the opportunity for a new school to be built.

Also, the West Byfleet Health Centre which also serves Pyrford is at maximum capacity and a further opportunity for a new centre to be built on Martyrs Lane.

Traffic and congestion in Pyrford and the Pyrford country roads are at capacity for access to the M25/A3 and local access

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02998/1/001  
**Customer Name:** Mrs M E E Winfield

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02999/1/001  
**Customer Name:** Mr B R Winfield

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 03000/1/001  
**Customer Name:** Mrs Lesley S Speller

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. **Customer Name:** Uche Achebe

**Summary of representation:**

Essential wildlife haven and the woodland contributes greatly to the amenity of the area. We need green spaces in our towns. Horsell Common Preservation have judged the development as detrimental to local wildlife.

The current infrastructure including roads, schools and doctors cannot cope with such a great scale of development, and public transport is poor.

There are also local flooding issues likely to be made worse by the removal of such a large area from the green belt.

Development should be spread out over the borough to limit the impact on any one area.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The Martyrs Lane site would have more affordable properties build on it compared with Pyrford a thousand houses in one place a new school would have to be built. Our school in Pyrford is at capacity and adds to traffic.

The northern part of the site is well served with public transport unlike the other six sites

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

he northern part of the site is close to major local employers like St Peter's Hospital, Animal & Plant Health Agency and also Woking Town

Much of the northern site has already been used for non-agricultural purposes

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Summary of representation:**

Need to protect Pyrford from being swallowed up, Pyrford is a special village and building new houses on Upshot Lane fields would impact the area.

The infrastructure could not cope with the extra amount of homes with the additional cars.

Pyrford have existing problems with the school traffic.

The local shops could not cope with the numbers of people who would want to use them, not enough parking.

The health centre in West Byfleet is our nearest is already has not enough parking.

The representation considers Martyrs Lane site would be the better option.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. **Summary of representation:**

Strongly in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane excluding the New Zealand Golf Course.

All seven sites under discussion are in the Greenbelt and naturally local opposition is to be expected in all cases. However the overall impact upon the green belt countryside, local amenity, transport infrastructure, ecology and environment would be considerably less if Martyrs Lane site were substituted for the six other sites, especially in the case of the two Pyrford sites.

The Martyrs Lane site is not pristine agricultural land

The Martyrs Lane site is visually low profile, already well hidden with a low visual impact compared with the other sites.

The Martyrs Lane site is already completely surrounded by an existing busy existing urban environment and infrastructure and has previously been developed for non-agricultural purposes.

There is currently no public access to the Martyrs Lane land, this reducing the impact of its loss upon public amenity.

The northern part of the Martyrs Lane site has already recently been granted planning permission

The Martyrs Lane site is well served with public transport, unlike the other six sites

The Martyrs Lane site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. Although traffic and congestion is a problem everywhere in the Borough, the Martyrs Lane site is far better able to cope than the combination of the six other sites.

The Martyrs Lane site is close to major local employers like St Peter's Hospital, Animal & Plant Health Agency and McLaren

A single site would provide significant economies of scale in terms of the infrastructure requirements that will arise from providing these new homes; namely more affordable homes, schools, possibly social housing, doctors surgeries, traffic volumes, waste water etc.

Similarly the disruption during development and construction would be confined to a single location and therefore be more efficient overall and simpler to control.

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer existing residents of the Woking area would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would

leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the

A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

**Customer Name:** Martin Grant Homes

**Summary of representation:**

There is no credible evidence to support development at Martyrs Lane. To the contrary, landscape, Green Belt, sustainability appraisal and highways evidence prepared on behalf of Woking Borough Council all confirm that development at Martyrs Lane would significantly undermine the purposes of the Green Belt, and better alternative sites exist to meet housing needs.

There is no certainty that Martyrs Lane would be deliverable. The New Zealand Golf Course does not support the safeguarding of Martyrs Lane and has requested for the land in its ownership to be removed from the proposal. There is also no evidence to demonstrate that the other landowners would support the development of the site. Without the support of the New Zealand Golf Course the proposed allocation would not work. Without this land, the rest of the site would only deliver 900 dwellings. Council Officers have said that without the Golf Course, Martyrs Lane would be too isolated to be standalone development site.

If the Council were to safeguard the Martyrs Lane site as against the other alternatives six sites, there is the likelihood that the Site Allocations DPD will be found unsound because it will fail the tests set out in paragraph 182 of the NPPF. Martin Grant Homes (MGH) has sought legal opinion, which concludes that should Woking Borough Council continue to ignore their own evidence and proceed to Regulation 19 consultation including Martyrs Lane and not MGH's site, there is a very high risk that the Site Allocations DPD will ultimately fail at Examination.

MGH has also carried out a landscape and Green Belt Statement that concludes that the Martyrs Lane site contributes to the objectives of the Green Belt by preventing urban sprawl and safeguarding the countryside from encroachment. It has carried out an ecological assessment to demonstrate that development at Martyrs Lane would result in significant adverse effects. Finally, it has prepared a Transport Note, which concludes the impact of development at Martyrs Lane on the highway network would be severe.

The MGH site is identified in the 2011 and 2014 SHLAA as deliverable and developable during the plan period, if considered to be suitable for release from the Green Belt. Martyrs Lane was not promoted as part of the SHLAA.

The Green Belt to the south of Woking which covers Mayford is identified in the Core Strategy as a broad location for long term residential development with specific sites to be released as part of the Site Allocations DPD, informed by a Green Belt boundary review.

The Council's Green Belt boundary review carried out by Peter Brett's Associates identified the MGH's sites as acceptable housing sites and recommended that they should be removed from the Green Belt to meet future housing needs. By contrast, the study recommended that the Martyrs Lane site should be retained within the Green Belt.

The draft Site Allocations DPD that was published for Regulation 18 consultation identified the MGH's sites to be released from the Green Belt and safeguarded to meet future development needs of the borough post 2026. This is supported by the Council's own evidence. The Martyrs Lane site has consistently been discounted by the Council as a suitable location for housing and has only recently been added into the consultation process, contrary to the Council Officer's recommendation and legal advice. The site has been introduced by Members of the LDF Working Group in spite of, rather than in support of, the extensive technical work that has been undertaken by the Council to prepare a sustainable Local Plan that meets the requirements of the NPPF. Each stage of the Site Allocations DPD process had discounted the Martyrs Lane site as appropriate for release from the Green belt.

The site is not within suitable walking distance of town centres (Sheerwater and Woking) and that the site has limited accessibility due to its isolated location.

Part of the site is an existing waste facility, protected under Policy DC1 of the Surrey Waste Plan 2008. The site is also partly designated as an area safeguarded for mineral extraction (Policy MC6 and MC7).

The Council should return to the evidence base approach to plan making set out in the draft Site Allocations DPD and discount Martyrs Lane as a safeguarded site.

#### **Officer Response:**

It is necessary to highlight that the decision to consult on the option of the land east of Martyrs Lane as a reasonable alternative is a legitimate one and there is evidence to justify the decision. Paragraph 182 of the NPPF deals with the examination of Local Plans. It stresses that to be found sound, a Local Plan amongst other things must be justified. The plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. It would have been irresponsible of the Council if it did not at least consider the land east of Martyrs Lane as a reasonable alternative in the light of the changing circumstances regarding the part of the land in the ownership of McLaren which occurred after the Regulation 18 consultation and when the Green Belt boundary review was carried out. The delivery of the Core Strategy will impact on all aspects of life of people who live and work in the borough. In this regard, Members and Officers of the Council has a duty to familiarise themselves with all the necessary information that might be relevant to inform their decisions about the Site Allocations DPD, which is one of the key means for delivering the Core Strategy.

Officers accept that previous evidence gathered by the Council supported the safeguarding of the six sites including the sites in the ownership of Martin Grant Homes and discounted the land east of Martyrs Lane as potential site to meet future development needs of the borough. The Council broadly followed the recommendations of its evidence and the draft Site Allocations DPD reflects that. However, it is also a fact that representations received as a result of public consultation is a significant source of relevant evidence, and given that it is legitimate for the Council to carry out the consultation exercise, it is critical that any evidence gathered as a result of that is taken into account before decisions on the preferred approach to

safeguarding are taken. The overall goal of the Site Allocations DPD is to identify the most sustainable sites for development when compared against other reasonable alternatives. The Council will have to balance the information it receives from the consultation with its previous evidence to inform its decisions to achieve this goal.

The availability of the land will be a material consideration for its deliverability as highlighted by footnote 11 of the NPPF. It is acknowledged that if safeguarded, the land will be required for development between 2027 and 2040 and the NPPF highlights the prospect that the housing will be delivered on the site within five years. The New Zealand Golf Course has made representation to confirm that the Golf Course will not be made available for future housing development between 2027 and 2040. McLaren has also made representations to clarify that they do not object in principle to the safeguarding of the land to meet future development needs on condition that the part of the land in their ownership is allocated as a strategic employment site to meet the specific business needs of McLaren. Without both parcels of land, it would be unlikely that 1,200 new dwellings will be achieved on the site. This is a matter that the Council has to take into account when deciding its preferred approach to safeguarding. The ultimate goal that should drive the Council's decisions should be the need to achieve sustainable development and the robust evidence to justify its decisions. In this regard, if the Council decides on the available evidence that the Martyrs Lane site is the most sustainable when the available evidence has been considered, the lack of availability of parts of the land should not be an absolute constraint to the development of the entire land. The Council has Compulsory Purchase Powers that it could use to acquire land, and the appropriate legal advice will be sought if necessary. In accordance with paragraph 182 of the NPPF, the Council will only submit a Site Allocations DPD for Examination that it considers sound to avoid the risk of it being found unsound, acknowledging that the judgment on soundness is in the gift of the Independent Inspector of the Secretary of State.

Officers would not disagree that the development of the land east of Martyrs Lane would lead to urban sprawl and an encroachment into the countryside. The Council has carried out studies that leads to that conclusion, and is a material consideration that will be taken into account. The Council has also carried out a number of Transport Assessments to quantify and forecast vehicular trips that would be generated by the various safeguarding options. Overall, the assessment concludes that the scale of the forecast highway impacts varies in each of the options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or the other six sites (including the Mayford sites) are likely to exacerbate existing levels of congestion, instead of creating new one. Both options will require necessary and appropriate measures of mitigation to address forecast traffic and ensure sustainable development. It should be noted that in this particular regard, it is the cumulative impacts of the six sites that should be considered against the impacts of the Martyrs Lane site. There is no ecological evidence that is deemed as absolute constraint which will absolutely rule out the development of any of the sites being considered, acknowledging that the outcome of any detailed ecological assessment will be a material consideration that the Council has to take into account.

It is agreed that the sites in the ownership of MGH have been promoted in the SHLAA, whilst the Martyrs Lane site as a whole has not. Parts of the Martyrs Lane site have been promoted in the SHLAA. Nevertheless, the fact that a site has not been promoted in the SHLAA should not rule it out for further assessment if there is reasonable justification for the assessment. It is also agreed that the Green Belt boundary review did not recommend the release of the Martyrs Lane site for future development. The justification for the consultation on the site as a reasonable alternative has already been addressed. This same justification would apply to why the site is being considered when it was not proposed in the draft Site Allocations DPD. The LDF Working Group was clear in its recommendations about why it wanted the Council to consider the land east of Martyrs Lane as a reasonable alternative. That is a judgment that is in the remit of the Group to make. The ultimate decision about the Council's preferred approach to safeguarding and consequently the Publication version of the Site Allocations DPD to be published for Regulation 19 consultation will rest with the Council after it has considered all the available evidence, including the consultation responses.

The representation has suggested that the Council had sought legal opinion which supported the safeguarding of the six sites. It is important to clarify that this is not exactly the case. The legal opinion that was sought was about the principle of safeguarding and not about which sites should be safeguarded. Contrary to the representation, it is also clarified that the Core Strategy does not identify the south of Woking as a broad location for long term residential development. The Core Strategy identifies the whole Green Belt as broad location for future growth and requires a comprehensive review of the entire Green Belt with the view to identifying the most sustainable sites for development. This approach to the Green Belt boundary review was debated at the Core Strategy Examination and supported by the Inspector. Figure 3: Areas identified for growth of the Core Strategy provides a clear illustration of this.

The Council recognises the contribution that the community recycling centre makes towards its objective to maximise recycling in the borough. Its retention in situ, as part of a master planning of the site or a new facility at an enhanced location will be made a key requirement of the allocation of the site when the Core Strategy and/or the Site Allocations DPD is reviewed. The County Council who owns the facility is supportive of this approach. The owner of the land safeguarded for minerals extraction has submitted a representation as part of the Martyrs Lane consultation, and has indicated support for the site to be safeguarded to meet future housing needs of the Council. In this regard, the land would be available for future housing needs subject to further discussion with the County Council on whether or not the site will continue to be needed for their future purposes. At this stage the County Council is unsure about the future need of the site for their purposes until further assessment is undertaken as part of the emerging Surrey Waste Local Plan. Officers will continue to liaise with the County Council on this matter, and are confident that a consensus could be reached.

**Contributor Reference:** 03027/1/001  
**Customer Name:** McLaren Technologies Group LTD

**Summary of representation:**

McLaren supports the safeguarding of the land east of Martyrs Lane to meet future development needs as long as the proposal is clear to emphasise that the safeguarded land is for the long term housing and employment needs within the borough and the land in its ownership is identified only for strategic employment use for its specific purposes. The inclusion of the McLaren owned land within the safeguarded boundary without a clear policy for its separate use to meet its needs would have the potential to frustrate any future development aspirations for the site, which McLaren may wish to bring forward during the current plan period. McLaren's business needs far outpace the planning process, and therefore would request that the land is made available to meet its business needs as and when it is needed. Its development should not be restricted by the 2027 – 2040 timeframe. The safeguarding of the site for housing will prejudice the future aspirations of the company.

The benefits of allocating the McLaren site for strategic employment use would support the delivery of the Core Strategy, and clearly aligns with the intended purpose of the Site Allocations DPD.

Despite the stated purpose of the Site Allocations DPD being to allocate land for a range of uses, the McLaren Campus has not to date been proposed to be allocated as a strategic employment site irrespective of the obvious justification and benefits for doing so.

The allocation of the McLaren site for employment purposes to meet its needs will still require any development proposals to be fully assessed against the Local Plan and take into account the views of statutory consultees and other interested parties. However, application for development proposals would not have to be justified by special circumstances grounds anytime they are submitted.

The purpose of the Site Allocations DPD is to allocate land for a range of uses, and yet the focus is on housing without due regard for key strategic land uses such as employment and McLaren's needs. There is a danger of not maximising a significant opportunity to support key strategic land uses within the borough.

The McLaren's land within the Martyrs Lane proposal has an extant planning approval for a high quality office and research park. Its retention for quality office and/or research premises is important as no other similar sites are available within the borough. The site is suitable for employment use and well contained in its landscape context. McLaren has undertaken a landscape assessment to demonstrate that the development of the site can be accommodated without significantly impacting upon the surrounding landscape character and visual amenity. The site has already been tested against the purposes of the Green Belt. The allocation of the site would establish a policy-led approach to supporting important employment sites within the Green Belt.

McLaren is a highly successful, dynamic and rapidly growing group of companies. It is important to the local, regional and national economy. Its designation within the Green Belt creates greater uncertainty for its growth and expansion needs as each proposal has to be called in by the Secretary of State and justified by special circumstances. In the wider political and economic context, local planning policy should recognise and encourage the further sustainable development of this important economic driver. The site is already an existing developed site in the Green Belt. It is therefore considered unnecessary for any future development proposal to continue to be justified by special circumstances.

McLaren supports sustainable working practices, reduces associated pollution and minimises impacts on the highway network through removing travelling between sites and allowing effective sustainable transport solutions to be established as a result of economies of scale.

McLaren has proposed three options for the Council to consider. It has also proposed an allocation policy setting out the key requirements for development of the site to be acceptable. This is contained in their representation. The three options are set out below:

- o The removal of the campus from the Green Belt and allocation as a strategic employment site;
- o The removal of the eastern site from the Green Belt as part of Martyrs Lane safeguarded proposal, and allocation of the western site as a strategic employment site;
- o Allocation of the campus as a strategic employment site.

#### **Officer Response:**

In accordance with Section 15 of the Planning and Compulsory Purchase Act 2004, Woking Borough Council has prepared a Local Development Scheme (LDS) that has committed the Council to prepare amongst others the following distinct but interrelated Development Plan Documents each with a specifically stated purpose:

- o The Woking Core Strategy (adopted 2012) – a strategic document setting out the Vision and Spatial Strategy for meeting known and anticipated development requirements to 2027, including number of dwellings required;
- o Site Allocations Development Plan Document (DPD) – to identify and allocate sites for development. In particular, sufficient employment and housing land and infrastructure to cover the period to 2027, in accordance with requirements, vision and spatial strategy set out in the Core Strategy;

The LDS requires the Site Allocations DPD to be in general conformity with the Core Strategy. Policy CS1: A spatial strategy for Woking Borough of the Core Strategy identifies the Green Belt and the Town Centre as broad locations for the future direction of growth to meet housing need between 2022 and 2027. It requires the Council to undertake a Green Belt boundary review to make sure that the release of Green Belt land does not undermine its purposes and integrity. Accordingly, the Council has carried out the Green Belt boundary review and its outcome is part of the evidence base being used to inform the preparation of the Site

Allocations DPD. Specific attention is drawn to the policy emphasis on the Green Belt being identified as future direction of growth to meet housing need. The Council has carried out an employment needs assessment to inform the Core Strategy. Policy CS1 sets out the overall quantum of employment floorspace to meet the borough's needs up to 2027, recognising that individual companies might have unique and special needs that need to be determined and addressed on a case by case basis. The Core Strategy has also established the overall spatial distribution of development across the borough and has required that the employment needs of the borough could be met within the urban area and other industrial estates without the need to allocate Green Belt land. This approach has been comprehensively discussed at the Core Strategy Examination and supported by the Secretary of State. The significant word being highlighted in this context is allocate.

Policy CS15: Sustainable economic development of the Core Strategy provides the policy framework for meeting the economic needs of the area. The policy clearly emphasises that the need for further economic development floorspace will not necessitate the allocation of greenfield land for employment use. The existing employment estates are protected to meet projected need and are capable of accommodating future requirements. Policy CS15 re-enforces the overall spatial strategy not to allocate Green Belt land for employment uses. There is therefore no ambiguity that the Site Allocations DPD is not intending to allocate employment uses in the Green Belt. To do otherwise would put the Council at risk for preparing a Site Allocations DPD that is not in general conformity with the Core Strategy.

The Martyrs Lane consultation had a specific purpose of consulting on the possibility of safeguarding the land east of Martyrs Lane to enable the delivery of 1,200 new homes. Therefore, whilst the Council does not doubt the significance of McLaren to the local, regional and national economy, the Site Allocations DPD has a clear purpose, which does include the allocation of Green Belt land for employment uses (safe to highlight that Broadoaks is a policy carried forward from the Core Strategy). The overall employment strategy of the Core Strategy can be met without the need to allocate Green Belt land. This does not mean that the individual needs of companies such as McLaren will be ignored if a specific proposal is put before the Council for consideration. The Council will respond to such needs on a case by case basis, and there is historic evidence of how the Council has worked constructively with McLaren to achieve their business needs at their existing location in a sustainable manner. The constructive and positive approach taken by the Council to looking at such proposals on a case by case basis is likely to continue in the future.

The NPPF is clear on the circumstances for altering the Green Belt boundary. Once established, the Green Belt boundaries should only be altered in exceptional circumstances. Based on the provisions of the Core Strategy as highlighted above, at the strategic level, special circumstances justification would not exist to allocate land in the Green Belt for strategic employment uses. The Site Allocations DPD allocates a range of sites to meet the overall employment needs of the area. The approach taken in the Site Allocations DPD is in line with the spatial strategy of the Core Strategy. This does not rule out the consideration of a proposal on a case by case basis on the merits of a specific proposal.

The construction of new buildings in the Green Belt is inappropriate except for those types of development and use defined in paragraphs 89 and 90 of the NPPF. It is therefore reasonable to expect McLaren to justify each proposal by special circumstances to accord the objectives of these policies their due. It would also be unreasonable to allocate the McLaren land holding within the Martyrs Lane proposal as a Major Developed Site in the Green Belt because it would not meet the definition of a Major Developed Site in the Green Belt as defined in the Glossary of the Core Strategy.

It is acknowledged that the McLaren site has an extant planning approval for a technology centre (60,000 sqm). However, the approval is on a condition that it will be revoked if a similar proposal approved to consolidate their activities at their existing campus is implemented. In this regard, it is not envisaged that the lack of allocation of their land east of Martyrs Lane would compromise the certainty of their short to medium term growth aspirations.

The McLaren site is in a sensitive location, washed over by the Green Belt. It is adjacent to the Thames Basin Heaths Special Protection Area, and the surrounding landscape contributes to the setting of the borough. Nevertheless, whilst the site has not been allocated for employment purposes, the Council has positively responded to the growth requirements of the company when it could be justified. It is important that future development proposals on the site are appropriately justified to ensure the continuing protection of the purposes of the Green Belt and the other environmental features in the vicinity. Judging this on the merits of each proposal offers the appropriate level of scrutiny to ensure the sustainable development of the campus. The Council understands the frustration expressed by McLaren in having to make a special circumstances case for each proposal. However, it needs to balance that with its responsibility to protect the Green Belt and ensure the sustainable development of the borough.

The Council will continue to work constructively with McLaren to meet their business needs and consolidate their operations in Woking. The Council believes that the merits of continuing to seek special circumstances justification for future development of the site far outweigh the request to allocate the site for strategic employment uses. It is not envisaged that the decision not to allocate the site has significantly constrained the growth of the company to date.

**Customer Name:** Mr F. West, Mr D. West, Mr K. West, West Estates Ltd

**Summary of representation:**

- o The plan should identify a supply of specific deliverable sites to meet Woking Borough Council's (WBC) objectively assessed housing needs up to 2027, however, it is evident that this is not the case and accordingly this will exacerbate future development needs.
- o Woking Borough Council should consider revising Green Belt boundaries consistent with the policies of the NPPF in the context of achieving sustainable development (including the aim of significantly boosting the supply of housing) and the exceptional circumstances test.
- o WBC should recognise the need to identify safeguarded land to meet development needs beyond the plan period given the failure of the current development plan to plan positively for the borough's objectively assessed development needs.
- o WBC should not include land which it is unnecessary to keep permanently open.
- o WBC should satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period.
- o The WBC's Green Belt boundary review recognises that the land west of Byfleet makes a limited contribution to Green Belt purposes and accordingly the release of the sites will not give rise to significant harm in Green Belt policy terms.
- o The Byfleet sites are suitable for residential development with no insurmountable or technical constraints.
- o The Byfleet sites are located within a sustainable location, suitable to accommodate new development in line with the adopted spatial strategy for the borough. The Core Strategy identifies Byfleet as a key location for development due to its overall sustainability credentials, including its accessibility to local services and facilities.
- o The Byfleet sites are available for development now and are being actively promoted by a willing landowner.
- o Residential development of the Byfleet sites is confirmed to be a viable opportunity.
- o The Byfleet sites should be treated as a deliverable source of housing land beyond 2027 that may be safeguarded for release from the Green Belt without undermining the purposes of the Green Belt.
- o WBC Green Belt boundary review recognises that the land east of Martyrs Lane makes a critical contribution to the purposes of the Green Belt and accordingly its release would give rise to significant harm in Green Belt policy terms.
- o The land east of Martyrs Lane performs less well against standard suitability indicators such as traffic, ecology, landscape and flood risk compared with previously identified safeguarded sites. The land east of Martyrs Lane is subject to some significant statutory designations constraining development at this location. Given the scale of the proposed development at the site, it is considered that significant mitigation measures would be required to avoid potential harm to the identified adjacent sensitive receptors which could render the development unviable. No evidence has been presented to demonstrate development viability. The outcome of the Council's transport assessment found that the traffic impacts of developing the Martyrs Lane site will be far greater than the options considered in the draft Site Allocations DPD due to the scale of the development envisaged.

- o The land east of Martyrs Lane is not located in a sustainable location and development at this location would not conform to the adopted Core spatial strategy for the borough. The adopted Core strategy does not envisage directing development towards this location. The strategy set out in the Site Allocations DPD need to conform to the overarching vision of the Core Strategy and the proposed safeguarding strategy to release land east of Martyrs Lane beyond 2027 falls outside the NPPF compliant Core Strategy objectives.
- o The land east of Martyrs Lane is subject to multiple ownerships and interests and is not being actively promoted under a single vision for development. It is therefore unclear how the site might be delivered.
- o No evidence is presented confirming the potential residential development of the Martyrs Lane site as a viable opportunity.
- o The land east of Martyrs Lane should not be treated as the sole deliverable source of housing land beyond 2027 given the constraints identified and conflicts with the core purposes of the green Belt.

#### **Officer Response:**

The Council has an up to date Core Strategy that has been prepared in general conformity with the NPPF. The Core Strategy makes provision for the delivery of 4,964 net additional dwellings between 2010 and 2027, an annual average of 292 dwellings. Any suggestion that the failure to meet the objectively assessed housing need means that the Core Strategy was not positively prepared would be incomplete interpretation of the provisions of the NPPF, in particular, paragraph 47. The Site Allocations DPD seeks to identify specific deliverable sites to enable the comprehensive delivery of the Core strategy housing requirement. The Council acknowledges that its objectively assessed housing need is 517 dwellings per year. The NPPF requires the Council to use its evidence to ensure that the Local Plan meets in full objectively assessed need for market and affordable housing in the housing market area, as far as is consistent with policies set out in the NPPF. The Core Strategy has been examined against the policies of the NPPF taken as a whole and found sound. It would therefore be unreasonable to suggest that the Site Allocations DPD should plan to meet the objectively assessed housing need for the area. In any case, it will not be the role of the Site Allocations DPD to reset the housing requirement without the proper assessment of its impacts on jobs and infrastructure provision. The setting of the housing requirement is the sole role of the Core strategy as set out in the Local Development Scheme. Based on historic housing delivery for the last 10 years and on a number of assumptions, the Council has projected that it will continue to enable the delivery of 292 dwellings between 2027 and 2040, whilst acknowledging that an exact housing requirement can only be confirmed during the review of the Core Strategy and based on up to date evidence and policy context at the time. The approach to safeguarding should therefore be seen in this context. Against this backdrop, the Core Strategy was positively prepared and provides the necessary and appropriate strategic policy context for the preparation of the Site Allocations DPD.

The overall objective of the planning system and of the Core Strategy is to help achieve sustainable development. The Site Allocations DPD has been prepared in general conformity to the Core Strategy with the same overall objective. Regarding the Site Allocations DPD, meeting

this goal in addition to the purposes of the Green Belt would include consideration of evidence and factors such as the outcome of the sustainability appraisal, proximity of sites to key services and facilities to minimise the need to travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect and feasibility for mitigating development impacts. It is also about creating sustainable places that links homes to jobs and key facilities and services by sustainable modes of travel. The decision of the Council regarding the preferred approach to safeguarding for the purposes of the Regulation 19 consultation will rest on balancing all the above factors, using the available evidence. The overriding special circumstances justification for the release of Green Belt land to meet future housing need has been scrutinised and established by the Core Strategy. The goal of the Site Allocations DPD as defined in Policies CS6 and CS10 of the Core Strategy is to identify land in the most sustainable locations when compared against all other reasonable alternatives.

The Council has recognised the need to plan beyond the Core Strategy period. The whole essence of safeguarding land in the Site Allocations DPD is to enable long term future development needs beyond the Core Strategy period to be met without having to review the Green Belt boundary again during this plan period. This is positive planning in line with the requirements of paragraph 85 of the NPPF. The approach taken in preparing the Site Allocations DPD will help ensure the enduring permanence of the Green Belt boundary well beyond the current plan period.

The Council has gathered a significant body of evidence through various studies such as the Green Belt boundary review, Transport Assessment, Habitats Regulations Assessment to make sure that any land that is released from the Green Belt does not undermine its overall purpose. Implicitly, only land with no or minimum impact on the purposes of the Green Belt will be released for future.

Based on the conclusions of the Green Belt boundary review, it is accepted that the Byfleet sites does not perform any critical or major Green Belt purposes. This is a material consideration that Council will take into account to inform its decisions. It is stressed that the assessment of the purposes of the Green Belt is only one of a number of material consideration which will inform the Council's preferred approach to safeguarding. Some of the other factors that are likely to be taken into account are listed above.

The Council accepts that there are no absolute technical constraints for developing the Byfleet sites. The sites are in close proximity to the Byfleet Local Centre and the Council is aware that the sites have been promoted for residential development in the SHLAA and will be available for future development. It is not envisaged that there will be viability constraints that will prevent the sites coming forward when required to meet development needs. All these factors are material consideration the Council will take into account to inform its decisions.

Paragraph 80 of the NPPF defines the five purposes of the Green Belt. Of particular relevance to this representation are:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

The Council has carried out the following two studies that assessed the site against the above purposes of the Green Belt.

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the studies, the Council would agree with the representation that the development of the land east of Martyrs Lane would lead to a degree of urban sprawl and a potential perception of towns merging. This is a matter the Council will have to weigh in the balance in its decision about the preferred approach to safeguarding. It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development. Each policy in the NPPF including the Green Belt policies such as paragraph 80 are therefore servant to the overall goal of achieving sustainable development. Sustainable development is the overall goal of the Core Strategy and decisions about its delivery must also be seen in that context. The Government's definition of sustainable development in the context of the planning system is 'the reference to the three dimensions of sustainable development, together with the core planning principles and policies at paragraphs 18 – 219 of the NPPF. Planning judgments must therefore be holistic and should seek to balance the Green Belt policies with all other policies with sustainable development as the ultimate goal. Regarding the spatial distribution of development across the borough and the Site Allocations DPD in particular, meeting this goal in addition to the purposes of the Green Belt would include other evidence and factors such as the sustainability appraisal, proximity of sites to key services and facilities to minimise the need to travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect and feasibility for mitigating development impacts. It is also about creating sustainable places that links homes to jobs and key facilities and services by sustainable modes of travel. The decision of the Council for the purposes of the Regulation 19 consultation will rest on balancing all the above factors, using the available evidence.

There are benefits and disbenefits for safeguarding any of the proposed options for safeguarding. Officers accept that regarding how the sites performs against the purposes of the Green Belt and landscape setting, the Martyrs Lane site appears to performs worse than the Byfleet sites. However, there are no ecological constraints at both options that could not be mitigated. Development at Martyrs Lane will only be concentrated on the part of the land in Flood Zone 1. This is made clear in the consultation document. The areas in Flood Zones 2 and 3 are included in the safeguarding area to ensure a defensible Green Belt boundary. As far as flood risk is concerned, there is no obvious significant difference between the two options.

It is too simplistic to suggest that the transport impacts for developing the Martyrs Lane site will be far greater than the options considered in the draft Site Allocations DPD. Any comparison of transport impacts should be between Martyrs Lane and the cumulative impacts of the six sites (rather than with each of the six sites). The Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future

development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure sustainable development.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The Council has carried out a viability assessment to underpin its Community Infrastructure Levy Charging Schedule. Various development scenarios were tested and based on the

outcome of the assessment, the Council is broadly satisfied that the land at Martyrs Lane could be developed to achieve positive viability. The CIL viability assessment took into account the burden that the policies of the Core Strategy impose on development, including the need for development to be supported by adequate infrastructure. It is expected that the nature and scale of infrastructure that may be needed to support development at various sites might be different taken into account site specific and locational characteristics. However, overall, it is unlikely that the provision of the infrastructure will make the development of any of the sites unviable.

The Core Strategy does not rule out the land east of Martyrs Lane as suitable location for development. Figure 3 of the Core Strategy illustrates the broad location for growth which will form the area of search for the purposes of releasing land from the Green Belt. It is misleading to suggest that the location would not conform to the adopted core spatial strategy for the borough. If the Council is to safeguard the land east of Martyrs Lane, it will be in general conformity with the spatial strategy for the borough.

The Council is aware that the land east of Martyrs Lane is in multiple ownership and will require land assembly to enable the comprehensive development of the land. Some parts of the land have been promoted through the Strategic Housing Land Availability Assessment and are likely to be available for future development. The New Zealand Golf Club has made representations as part of the consultation and has confirmed that the golf course will not be available for safeguarding. McLaren has also made representations. Whilst it does not object to the principle of safeguarding the land for future development, it wants the land in its ownership to be allocated as a strategic employment land to meet its specific development requirements. In accordance with footnote 11 of the NPPF, the Council is mindful of the importance of land availability to the deliverability of sites, and will be taking that into account in its decisions. If the Council deems the land at Martyrs Lane to be the most sustainable when compared against the others, then it has compulsory purchase powers that it may choose to use, and a legal opinion will be sought in that regard if necessary.

The Council is seeking to safeguard land in the most sustainable location to enable the delivery about 1,200 new homes between 2027 and 2040. Any option that the Council decides to safeguard should meet this test.

**Customer Name:** Mr Josh Warby

### **Summary of representation:**

Strongly in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane excluding the New Zealand Golf Course.

All seven sites under discussion are in the Greenbelt and naturally local opposition is to be expected in all cases. However the overall impact upon the green belt countryside, local amenity, transport infrastructure, ecology and environment would be considerably less if Martyrs Lane site were substituted for the six other sites, especially in the case of the two Pyrford sites.

The Martyrs Lane site is not pristine agricultural land

The Martyrs Lane site is visually low profile, already well hidden with a low visual impact compared with the other sites.

The Martyrs Lane site is already completely surrounded by an existing busy existing urban environment and infrastructure and has previously been developed for non-agricultural purposes.

There is currently no public access to the Martyrs Lane land, this reducing the impact of its loss upon public amenity.

The northern part of the Martyrs Lane site has already recently been granted planning permission

The Martyrs Lane site is well served with public transport, unlike the other six sites

The Martyrs Lane site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. Although traffic and congestion is a problem everywhere in the Borough, the Martyrs Lane site is far better able to cope than the combination of the six other sites.

The Martyrs Lane site is close to major local employers like St Peter's Hospital, Animal & Plant Health Agency and McLaren

A single site would provide significant economies of scale in terms of the infrastructure requirements that will arise from providing these new homes; namely more affordable homes, schools, possibly social housing, doctors surgeries, traffic volumes, waste water etc.

Similarly the disruption during development and construction would be confined to a single location and therefore be more efficient overall and simpler to control.

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer existing residents of the Woking area would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593

operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

**Customer Name:** Christiane Mackie

**Summary of representation:**

The building of new homes on land north of the NZGC would be largely hidden and therefore offer a lower impact to the local area than the Pyrford fields which are adjacent to the ancient sites of both Pyrford Church and also the monument at Newark Lane.

Pyrford School and West Byfleet Health Centre are both fully subscribed and would therefore offer no further capacity for education or health care for new homes.

Traffic along the Old Woking Road A245 through West Byfleet to the M25 bridge is at capacity. Building on the Pyrford fields would exacerbate this where as building north of the NZGC has more access to the motorway and Chertsey.

Any further building would increase pollution caused by further stationary traffic and greater inaccessibility.

Planning has to be responsible and accountable to it's community.

**Officer Response:**

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst the representation notes that the development should be north of the New Zealand Golf Course and should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings

will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

The Council and its Planning Services exercises all of its powers and duties in accordance with the law and the Council's Constitution. The purpose of the Constitution is, amongst other things, to enable the Council to provide leadership to the community in partnership with citizens, businesses and other organisations. The Core Strategy sets out the overall approach to managing development and change in the Borough, and public involvement was integral to its preparation. Whilst the vision of the Core Strategy – including the delivery of approximately 5,000 additional dwellings – might not satisfy everyone, the Council believes that it strikes a good balance between all the conflicting needs and aspirations for the Borough. The Council is committed to preparing a Site Allocations DPD to allocate specific sites to meet the proposed level of development set out in the Core Strategy, and this includes sites in the Green Belt in order to meet housing needs of the future community of the Borough beyond 2027. A key objective in carrying out this consultation exercise, as well as additional consultation exercises such as the recent 'Regulation 18' consultation, is to determine the views of the local community on future development plans. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding, and thus help the Council to be even more accountable to its community.

**Contributor Reference:** 03007/1/001  
**Customer Name:** Mr Bill Ashpitel

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The land to the east of Martyrs Lane has been partially developed before and is an area with good infrastructure.

The A245 is already close to full capacity so any new development in Byfleet and Pyrford is very likely to lead to the A245 being overloaded.

The Green belt area south of Pyrford are fully accessible and used by many of the residents from all areas of the borough, this is not true of the land to the east of Martyrs lane.

Using the land to the east of Martyrs lane will have the advantage of being a single site which would allow local amenities to be incorporated into the design.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 03008/1/001  
**Customer Name:** Mr A Hannell

**Summary of representation:**

In favour of substituting the 6 sites in the draft Site Allocations DPD with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course.

A single site would provide some alleviation of current infrastructure issues that will arise building more homes, traffic etc..

Fewer residents would be impacted with one site than by 6 individual sites.

The cost of the land in this area, compared to Pyrford would be more reasonable and therefore provide an opportunity for affordable housing and some social housing.

This site is also close to three major employers, St Peter's Hospital, the Animal and Plant Health Agency and McLaren Technology Centre.

Pyrford Primary School is full to capacity. A new development in Martyrs Lane would provide the opportunity for a new school to be built.

The West Byfleet Health Centre which also serves Pyrford is at maximum capacity and a further opportunity for a new centre to be built on Martyrs Lane.

The Pyrford roads and country roads are at capacity, being used for access to the M25/A3 and local access.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without

the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 03009/1/001  
**Customer Name:** Mr David Niven Reed

**Summary of representation:**

The land to the east of Martyr's Lane is not suitable for development.

The land to the east of Martyr's Lane is Green Belt land. Green Belt land is important to restrict urban sprawl and protect the countryside.

The A320 Chertsey Road, Guildford Road, Woodham Lane, and Martyr's Lane, as well as the other roads around the area, are already congested. The additional traffic generated by a housing development on the Martyr's Lane site would significantly worsen the traffic situation.

The land to the east of Martyr's Lane contains areas that are prone to flooding.

The representation considers that the other 6 sites mentioned are also not suitable for development as they are on Green Belt land. Encroaching on Green Belt land little by little is not the answer. Housing development should be carried out either urban brownfield sites or in the form of multi-storey apartment buildings, 6 storeys or higher, in the town centre to bring life and commerce back to the town centre.

**Officer Response:**

Objection for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council has carried out two relevant studies:

- Woking Green Belt review (2013) by Peter Brett Associates; and
- Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land

has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character’.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett’s report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council’s ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The Council is fully aware of local resident’s concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of

the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Based on the above, it is not envisaged that the occupants of the development on the site would face unacceptable risk of flooding.

The Council have comprehensively assessed brownfield sites as part of the evidence to inform the Site Allocations DPD. The Council has published detailed information on previously developed land (brownfield land) that is suitable, available and achievable for housing and employment purposes. This is contained in the Strategic Housing Land Availability Assessment (SHLAA) (2015), the Employment Land Review (2009) and Employment Topic Paper (2015). The documents are on the Council's website at [www.woking.gov.uk](http://www.woking.gov.uk). The Council has also carried out and published a Sustainability Appraisal Report that assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives, including environmental, social and economic objectives. The available evidence on previously developed land is sufficiently comprehensive and robust enough to enable informed decisions about the preferred sites being proposed for allocation in the DPD. The evidence also demonstrates that the preferred sites are the most sustainable when compared against other alternative sites. It is important to highlight that there is no presumption that land which is previously developed is necessarily suitable for residential development. Officers will consider any other sites that will be suggested for consideration in response to the Regulations 18 and 19 consultations on the DPD.

There is a considerable number of sites within the draft site allocations DPD within the town centre which contribute to Policies CS1 and CS2 of the Core Strategy.

**Contributor Reference:** 03010/1/001  
**Customer Name:** Shirley Selden

**Summary of representation:**

Object based on:

Loss of green belt

Urban Sprawl

Flood risks

Road transport – A320 and pressure on other local roads

Lack of public transport

Infrastructure pressure e.g. no plans for new school, hospitals etc

Wildlife loss of habitat

Loss of trees and woodlands

Martyrs Lane recycling centre is essential and should remain

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 03011/1/001

**Customer Name:** Mr Christopher Wilmshurst – Vail Williams

**Summary of representation:**

Vail Williams, in collaboration with Seymours Land and New Homes, act on behalf of the owners of Durnford Farm and Little Durnford; Mellow End; Woodham Court House and Woodham Court which fall within the East of Martyrs Lane site.

The owners of the above sites all support the allocation of Land east of Martyrs Lane for future development needs in the period 2017 – 2040 and confirm that their land is both available and developable.

There is more certainty that a single site will deliver development as it is likely to be within the control of a single developer, or a small number, and therefore more likely to come forward within expected timescales rather than reliance upon a series of smaller sites with differing ownerships

Deliverable – a large single site is more likely to come forward for development when required rather than a series of smaller sites each working to their own timescales and owner aspirations;

Contributions – a large single site will generate a significant scale of contributions and infrastructure which will generate significant benefits to the wider population;

Less impact on openness – a single site will have a focused impact on the green belt which can be mitigated through design and landscaping whereas a series of smaller sites will each have an impact on the green belt leading to piecemeal erosion of openness;

Sustainability– a single large site can be developed as a single self contained sustainable location providing a sustainable mix of uses including residential, employment and community facilities to meet the needs of new residents as well as those already living in the area.

**Officer Response:**

Support and availability of parts of the land to the east of Martyrs Lane is noted.

Paragraph 182 of the NPPF deals with examination of local plans. It requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- o Should be deliverable over its period;
- o Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of the land.

The New Zealand Golf Course has written to the Council and has made formal representation as part of the consultation to confirm that the part of the land that is in its ownership will not be made available now, in the future and never to meet future development needs. In this regard, there is no expectation for a change in their position within and beyond five years. The representations from the New Zealand Golf Course are addressed in full separately.

McLaren Technologies Group Limited has also made representations. Whilst it would generally support in principle the release of the land from the Green Belt, it would only allow its land holding to be used as a strategic employment site to support its own future expansion programme. McLaren will not allow its land to be used as envisaged in the consultation. If the Council were to decide not to release the land east of Martyrs Lane from the Green Belt, McLaren have provided reasons why its land should be designated as a Major Developed Site in the Green Belt. The representations from McLaren has been addressed in full separately.

The lack of availability of the above sites could cast doubt on the deliverability of the land as a whole if it is safeguarded. To put it into context, assuming the two sites will not be available to meet future development needs and the Surrey County Council's Waste Safeguarded Site is also not available, the residual land (including the sites referenced in the representation) will only deliver about 300 dwellings (at 30 dph) as against the 1,200 dwellings that the Council wish to safeguard land. If the Waste Safeguarded Site is made available, there will be sufficient land to enable the delivery of about 600 dwellings at the same density. This is still significantly short of what is needed. Importantly, the Council has to make sure that any land that it safeguards would not lead to an isolated development within the Green Belt.

It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

The Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Contributor Reference:** 03012/1/001  
**Customer Name:** Mr Malcolm Rapps

**Summary of representation:**

The representation would like to thank the Working Group for insisting that the Martyrs Lane site should be seriously considered as a single site alternative to the current six sites in the DPD (2027 – 2040).

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

A single building site must provide economy of scale.

Parts of this Greenbelt Site have been allocated in the past to McLaren for a large factory.

The top part of the site also includes pre-developed land used as a wartime army camp.

The northern part of the site has already been used for non-agricultural purposes.

The site already has a "natural" screen from the main A320 road, and currently there is no public access to the land.

The northern part of the site has access on to the A320 via a roundabout with its direct road links to the M25 and to Woking town centre.

Local employment is provided by St Peter's Hospital; Animal & Plant Agency; McLarens & Woking Town Centre.

Recognising that all seven sites are Greenbelt, a single site of derelict/unused/lower cost area is more preferential than GB12 and GB13, a piece of Heritage ( Brett Report) beautiful countryside currently being used for farming

Far less disruption to many more people's lives in the Borough during the construction process

Also the other six DPD site areas of the Borough are already allocated for many building works in the Core Strategy requirement up to 2027; and therefore the disruption that is going to cause.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use

except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a

development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

**Customer Name:** Mr Paul Saper

**Summary of representation:**

This site is accessible to the M25 and A320. There is a lot of development to the south of Woking, the A320 is heavily congested. The new Hoe Valley School will add to this.

existing major employers including McLaren.

Small greenbelt sites without infrastructure.

Worplesdon station, which is reached by rural lanes, is at capacity.

The escarpment is a landscape feature that should be retained while land north of the New Zealand golf course is largely disused and derelict.

The Martyrs Lane site has significant advantages over piecemeal development of small greenbelt sites

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will work with public transport providers to improve service provision and frequency, if this site or any of the six sites were to be safeguarded for future development.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 03014/1/001  
**Customer Name:** Jeanette And Gary Goddard

**Summary of representation:**

Strongly objects to any proposed development on the green belt land of Pyrford fields. This area is of outstanding natural beauty and deserves special protection status. It is used and loved by walkers, ramblers, bird watchers, dog walkers, horse riders, school nature trails to name but a few.

The small community and country lanes cannot support 3000/3500 houses not mention another school, health centre and local amenities.

The whole area would become a gridlock for cars and lorries

A preferred site would be a single site development at Martyrs Lane where the land infrastructure would support another community development.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Consultation Paper sets out how the site would enable the delivery of at least 1,200 net additional homes to meet future housing need. It is not the intention of the Council to safeguard the land for 3000/3500 houses, as expressed in the representation.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation

is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Please note the proposed housing figures are Land rear of 79 – 95 Lovelace Drive, Teggs Lane, Pyrford (Proposal GB12 in the draft Site Allocations DPD. Anticipated capacity is 223 dwellings); and Land east of Upshot Lane and south of Aviary Road, Pyrford (Proposal GB13 in the draft Site Allocations DPD. Anticipated capacity is 200 dwellings).

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Summary of representation:**

Objects to building on green belt land, specifically Upshot Lane in Pyrford, and support the Martyrs Lane proposal.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

The principle of Green Belt development, including safeguarding land for future development needs, has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Objection to development proposals in Pyrford are also noted.

**Contributor Reference:** 03016/1/001

**Customer Name:** Mr And Mrs Frank And Barbara Smith

**Summary of representation:**

We support the substitution of the 6 sites for the land east of Martyrs Lane.

To accommodate all the required dwellings and necessary infrastructure, at one location on land which has no particular use or development, should be more cost effective than the development of six other sites with the complexities which will be encountered in linking in to and appropriately extending the existing infrastructure.

The development of the 6 sites will cause far more disruption to local residents and services than if the land east of Martyrs Lane is developed.

**Officer Response:**

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 03017/1/001  
**Customer Name:** Jenna Pearson

**Summary of representation:**

Objects to development on Martyrs Lane/Woodham lane.

Green Belt land here should be retained: the proposed area is currently beautiful woodland.

The site provides habitat for wildlife, and is part of what makes the area so nice to live in. The council needs to stop approving development in the Green Belt.

Transport – the area around the proposed development is already heavily congested with cars, buses, motorbike etc. Further housing in the area would make it worse.

Infrastructure – there are already difficulties in getting a place for children at schools in the area; and there are no schools in the vicinity of the site.

St Peters Hospital standard of care has declined over the years; adding additional pressure of more patients onto a struggling hospital will make things worse for those who rely on it.

**Officer Response:**

Objection to the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper (see Sections 1 and 2).

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24:

Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of education infrastructure provision, it is not known at this stage which type and nature of provision will be required at the site. The County Council is the education provider for the area and its views will be taken into consideration if the site is safeguarded. At this early stage, the County Council has set out in its representation as part of this exercise that it believes the provision of a primary education facility would be required. At the review of the Core Strategy and/or Site Allocations DPD, the Council can make this a key requirement of developing the site if it is chosen to be safeguarded. The overriding objective of this particular

exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council also works closely with health infrastructure providers, such as the Clinical Commissioning Groups, to determine existing capacity for serving new development, and to identify future health infrastructure needs. This includes the capacity of existing hospitals to serve new development and future development in the Borough. Again, the views of the Clinical Commissioning Groups would be taken into consideration and form part of the evidence base to inform the preparation of the Site Allocations DPD.

**Contributor Reference:** 02585/1/001  
**Customer Name:** Mrs D D Bunce

**Summary of representation:**

Support the Martyrs Lane proposal.

There would be less disruption to a number of communities where the existing roads are narrow and development will result in further congestion.

The Martyrs Lane site has better access to the motorways, Woking town and station and airports. Development on one site would enable the provision of well planned road infrastructure.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development.

**Customer Name:** Mr Peter Noel

### **Summary of representation:**

Support for the Martyrs Lane proposal.

National policy states that brownfield and previously developed sites should be used first. Pyrford sites have been used for agriculture and are high quality agricultural land. They also form an essential part of Pyrford's environment.

Martyrs Lane was granted planning permission for a factory which is now no longer required. The site was also used for development and the area north of the New Zealand Golf Course consists of derelict buildings and uncared for woodland.

Part of the site is publically owned land so a sale would help Council tax payers.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required plus any infrastructure requirements.

Only one local improvement will be required in infrastructure.

The Pyrford sites have less justification for removal from the Green Belt than the Martyrs Lane site. They are agricultural land, part of the local rural character and are of benefit to the whole of Woking. Martyrs Lane is previously developed, unimportant and has no public access.

Pyrford houses would command a higher price and Martyrs Lane would enable the provision of low cost housing and benefit from being in close proximity to local employers.

Martyrs Lane is adjacent to a major road and roundabout. The utility services could be provided efficiently. The A320 would be able to cope with additional traffic than the roads in the east and south of the borough. The road also provides access to the M25, Woking and neighbouring towns.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

There are a number of walking and cycling routes in Pyrford unlike the Martyrs Lane site.

Significant development in West Byfleet, Pyrford and Mayford would change the nature of those areas whereas the Martyrs Lane site is well screened and development could be accommodated behind that screening.

Support the Martyrs Lane proposal as it will have the least impact on the borough and minimise disruption.

Surprised that this was not originally put forward as it has more benefits than the six original sites from a financial, disruption and aesthetic point of view.

### **Officer Response:**

Support for the Martyrs Lane proposal is noted.

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land for development, including safeguarding

land for future development needs, has been established in the Core Strategy and is consistent with National Planning Policy. In addition, it should be noted that the Site Allocations DPD contains over 50 sites within the existing urban areas of the borough. The Site Allocations DPD as well as the Core Strategy clearly state that land will only be released from the Green Belt for development from 2022 when it is anticipated that there will be insufficient brownfield land to meet housing needs. Overall the Council has considered and assessed about 125 sites across the Borough in preparing its Site Allocations DPD.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting

their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

As set out above, the Council has undertaken a number of landscape studies to determine the visual impact of development of all of the various Green Belt options and will be one of the key considerations that will inform the Council's decision on its preferred safeguarding option.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

**Contributor Reference:** 02517/1/001  
**Customer Name:** Ms Rosalind Saper

**Summary of representation:**

It is within easy reach of the M25 and served by the A320. The roads south of Woking are congested

South Woking has seen substantial development, in Westfield Avenue, Moor Lane and a new school. It is unlikely that a new rail bridge to ease traffic from south Woking to the Triggs Lane/Goldsworth area could be provided.

The escarpment is an important landscape feature and ought to be protected.

A larger area that could accommodate adequate amenities is preferable to small individual greenbelt sites that lack the necessary infrastructure.

As McLaren is already established as a leading company providing employment in the area and there are other employers nearby it makes sense to provide homes nearby.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the

land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Customer Name:** Ms Barbara Cormie

**Summary of representation:**

Supports the proposal to use land north of New Zealand Golf Course on Martyrs Lane, for the development of new housing – instead of Pырford's green belt fields.

Martyrs Lane is a much more 'open' area, with much better transport links in place. As well as space to develop infrastructure as needed.

3,000 houses are not proposed but c1,000

Pырford is very much green belt – an oasis of greenery with a host of plants and wildlife that needs to be protected and preserved.

There are also pressures on our infrastructure – roads especially – that would be severely worsened by such large scale house building.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The representation is correct, the delivery of 1200 new homes is required not 3000.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a

single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

If the Council were to decide to safeguard this site or any of the six sites, the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

**Customer Name:** Miss Lisa Hammond

**Summary of representation:**

A single site will create an economy of scale

It is well connected to the existing urban area. The southern boundary of the site follows Woodham Lane (A245)

The site also benefits from good defensible boundaries on all sides and therefore, unlike many of the alternative housing sites. Specifically, Martyrs Lane and Guildford Road (A325) provide a strong defensible boundary to the north, whilst the remaining site boundary is protected by a combination of flood plan and administrative boundaries.

The following paragraph attached to the end of para 2.5 should be omitted or reworded to avoid prejudging any master planning principles.

'The site contains a number of existing residential properties along Martyrs Lane and Woodham Road. However it is not proposed that these would be redeveloped but instead are included within the site boundary to ensure that a strong defensible Green Belt boundary could be drawn.'

There is no evidence at this stage that retaining existing properties helps secure strong defensible Green Belt boundaries or not, it may well be that the removal of buildings best serves this aim.

Sites GB4, GB5 and GB10 are all considered to benefit from defensible boundaries. However they are all small and therefore only have the potential to deliver limited amounts if development and planning gain measures.

GB11 – This site appears to follow arbitrary boundaries which do not appear to be defensible and would lead to infilling.

GB12 and 13 – The allocation of these sites in combination will bring considerable pressure on surrounding land for future development which in turn risks the coalescence of both Pyrford Village and Pyrford Green with Pyrford to the north and north-west.

There are no landscape or significant environmental constraints or designations which apply to the bulk of the site. Small parts of the site are undevelopable by virtue of inclusion within flood zones 2/3 and a small part of the site falls within the SPA 400m buffer zone. These constrained areas are very small and would not prevent the delivery of housing and related development and infrastructure.

The site has no significant heritage constraints including no Conservation Area designations, no Scheduled Ancient Monuments, no historic gardens and no Statutorily Listed Buildings. Only a small number of locally listed buildings are present and there is no reason why these should not be retained.

Planning permission was recently granted for the top part of the site.

Previously developed site, part of the site is a golf club, sports pitches and courts, domestic gardens, a household waste recycling centre and plant nurseries. The site has no obvious landscape or environmental merit

Many of the trees are plantation style coniferous trees which are typically non-native, have little biodiversity value and limited landscape value.

The site is well connected to major employers, existing transport routes and the centre of Woking. The development potential of a site of this size also affords viable opportunities for further and significant transport improvements which are less likely to be secured via the alternative sites.

The strategic allocation of this site will provide the Council with a robust housing land supply and has the potential to deliver around 200 more homes than the combined total of the 6 alternative sites.

The site is also in a relatively lightly populated part of the Borough and therefore its ability to impact on significant numbers of residents and other land users is reduced.

Its location, particularly relative to the primary road network and the M25 also serves to minimise the impacts of construction

The NPPF duty to cooperate further supports the allocation of this site.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future

development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Green Belt boundary review report provides sufficient evidence that the release of the proposed allocated sites from the Green Belt will enable a defensible boundary to be drawn that will endure over a long period of time beyond the Core Strategy period. Where the recommendations of the Green Belt boundary review report had not been accepted by the Council, a clear reason has been given. The proposed Green Belt boundary has been drawn to follow the edge of the development sites in Mayford. For sites GB8, GB9, GB10 and GB14 there will be a continuation of the existing urban area which is well defined by Saunders Lane to the south and Egley Road to the east. The Green Belt boundary to the west has been defined by site GB11 which is adjacent to the Hook Heath escarpment. This will protect the purpose of the Green Belt and not undermine the integrity of the escarpment.

Site GB12 has a strong defensible boundary of Lovelace Drive, Teggs Lane and Upshot Lane. GB13 boundaries are Upshot Lane, a public footpath and Church Hill.

Site GB7 will continue to remain within the Green Belt and therefore the Green Belt boundary will not change in this particular location.

Regarding the representation in paragraph 2.5, the Council is not intending to redevelop existing properties within the site boundary. Nevertheless, if the Council decides to safeguard Martyrs Lane for future development needs, then these existing properties will need to be carefully considered as part of the masterplanning of the site. This would be considered in greater detail in future revisions of the Site Allocations DPD and/or Core Strategy, and at the Development Management stage.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

It is accepted that the Martyrs Lane site does not contain any absolute environmental constraints, but it does in fact contain other development constraints, such as areas of Ancient Woodland and in close proximity to Horsell Common. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard. The Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

**Contributor Reference:** 02978/1/001  
**Customer Name:** Mrs Carole Davis

**Summary of representation:**

Strongly objects to build a minimum of 1200 houses on the site around Martyrs Lane.

Particularly because it is in a large green belt area

Destroy this area and our environment when there are several other more suitable areas for redevelopment including brown field sites and the alternative of having several smaller sites in other parts of the borough.

creating a huge urban sprawl in what is currently an area of great beauty and habitat for wildlife.

No plan either to build more schools or medical facilities. Medical centre in West Byfleet and Fullbrook School and the junior schools in the area are at capacity.

Increased traffic on the A320 and of course Woodham Lane and the surrounding roads.

Appreciates the need for more housing but to build one huge estate is very unfair to the current residents of this area.

**Officer Response:**

Objection for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council have comprehensively assessed brownfield sites as part of the evidence to inform the Site Allocations DPD. The Council has published detailed information on previously developed land (brownfield land) that is suitable, available and achievable for housing and employment purposes. This is contained in the Strategic Housing Land Availability Assessment (SHLAA) (2015), the Employment Land Review (2009) and Employment Topic Paper (2015). The documents are on the Council's website at [www.woking.gov.uk](http://www.woking.gov.uk). The Council has also carried out and published a Sustainability Appraisal Report that assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives, including environmental, social and economic objectives. The available evidence on previously developed land is sufficiently comprehensive and robust enough to enable informed decisions about the preferred sites being proposed for allocation in the DPD. The evidence also demonstrates that

the preferred sites are the most sustainable when compared against other alternative sites. It is important to highlight that there is no presumption that land which is previously developed is necessarily suitable for residential development. Officers will consider any other sites that will be suggested for consideration in response to the Regulations 18 and 19 consultations on the DPD.

The Council has carried out two relevant studies:

- Woking Green Belt review (2013) by Peter Brett Associates; and
- Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred

site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

### **Summary of representation:**

Strongly agrees that the site to the East of Martyrs Lane should be substituted for the safeguarded sites (in Byfleet, Mayford and Pyrford) identified in the draft site allocations DPD to meet the long term future development needs of Woking Borough between 2027 and 2040 for the following reasons:

Site Capacity to build 1,024 dwellings. There is no need to build on NZGC in order to satisfy the requirement for these dwellings.

Previously Developed Site compared to the two fields in Pyrford have been farmed for centuries and have never been built upon. They provide the rural landscape essential to the semi-rural character of the area and are extensively used as a leisure facility, whereas the Martyrs Lane site is hardly if ever used.

the Martyrs Lane site was granted planning consent, was the base for 50 Nissen Huts for an Army Camp in WW2, and was used as emergency housing for about 5 years after WW2. Today this site north of the NZGC comprises unused, uncared for and semi-derelict facilities, and overgrown woodland.

The Martyrs Lane site can link straight onto the A 320 at the McLaren's roundabout. The sites in Pyrford & Byfleet are accessed by B or C roads with traffic flowing onto the A245. The A245 is already congested and this will only increase with the Broadoaks, West Hall and Sheer House in West Byfleet. Some traffic from the Pyrford field sites is likely to flow into the already congested and narrow streets of Ripley. On any objective basis, the Martyrs Lane site should result in less traffic congestion than the other 6 sites.

The Brett Woking Green Belt Report said these fields have very low suitability for removal from the green belt, and this category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and so should be selected, on this criteria, before the fields in Pyrford. The Pyrford land is in the category Major Environmental Constraint, classified as grade 3 agricultural with some grade 2 and is identified as an 'Escarpment and rising ground of Landscape importance': this designation is protected in Woking Core Strategy CS24, whereas Martyrs Lane falls into category Minor Constraint. These fields fall into two categories, namely little or no capacity for change and low capacity for change.

The Martyrs Lane site has no local or national landscape designations and has been partially developed in the past with both military and civilian accommodation. The Martyrs Lane site should therefore be selected for safeguarded development land before the Pyrford fields.

Infrastructure One larger site of 1,024 properties should provide an economy of scale, particularly when resolving infrastructure issues like water, waste, and electricity, compared

with the other 6 separate sites spread across the borough. Moreover the major water main on the adjacent A 320 is currently being renewed and is an added benefit for the Martyrs Lane site.

The disruption to residents and traffic of a single site should be significantly less during development than that at 6 separate sites.

The land value at the Martyrs Lane site is likely to be less than the 6 original sites suggested, and this should help provide affordable housing and key worker homes needed by employers such as McLaren's and St Peter's Hospital.

Martyrs Lane, could provide a new school and a health centre, relieving pressure on current resources at West Byfleet health centre and Pyrford School which are at capacity.

Martyr's lane has better bus services than other sites. Currently the 446 runs on Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford cease at around 18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Service. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services and arranging adequate services at one site will be easier than to several dispersed sites.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material

consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

If the Council were to decide to safeguard this site or any of the other six sites, its development will take into account any development proposals in the vicinity of the site.

**Contributor Reference:** 02980/1/001

**Customer Name:** Mr John Clark

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Isobel Jarvis

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt. Strongly objects to any development on Greenbelt as it has detrimental environmental effects as well as on living standards wherever it occurs. The approach of Central Government to "unprotect" protected land is totally reprehensible and makes a mockery of planning and general laws in this country.

However, on balance, I am in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land

to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Andrew Heaton

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

Martyrs Lane site is more suited based on the Brett Woking Green Belt report which states Pyrford has Very Low Suitability for removal from the green belt rather than Low for ML. The same report also states that the Environmental constraint would be greater in Pyrford than at ML as well as the fact that the impact on the rural character of Pyrford would be greatly affected which is not the case at ML.

Whilst Goldsworth Park is bigger than what is being proposed here, it clearly demonstrates that if you build from scratch large housing developments then you can provide the services needed to make it work for the residents, as opposed to the proposed bolt on sites which will only put huge pressure on already stretched services, such as doctors surgeries, schools and traffic management.

It has been mentioned that 3500 are needed, but I am not sure where that figure comes from as the 6 sites only totals 1024 so this consultation should only be relevant to that number which fits into the area north of NZ Golf Course.

## Officer Response:

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes

shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

**Customer Name:** Lynn Heaton

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

Martyrs Lane site is more suited based on the Brett Woking Green Belt report which states Pyrford has Very Low Suitability for removal from the green belt rather than Low for ML. The same report also states that the Environmental constraint would be greater in Pyrford than at ML as well as the fact that the impact on the rural character of Pyrford would be greatly affected which is not the case at ML.

Whilst Goldsworth Park is bigger than what is being proposed here, it clearly demonstrates that if you build from scratch large housing developments then you can provide the services needed to make it work for the residents, as opposed to the proposed bolt on sites which will only put huge pressure on already stretched services, such as doctors surgeries, schools and traffic management.

It has been mentioned that 3500 are needed, but I am not sure where that figure comes from as the 6 sites only totals 1024 so this consultation should only be relevant to that number which fits into the area north of NZ Golf Course.

## Officer Response:

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation

is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes

shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

**Contributor Reference:** 02505/1/001  
**Customer Name:** Mr And Mrs Angus And Davida Whimster

**Summary of representation:**

Opposed to the use of the Upshot Lane fields for housing development. Understand and sympathise with the need to create more housing but this needs to take account of the infrastructure and respect the environment.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course and should no build in excess of 1024 houses.

This site could accommodate the requirements for affordable homes and the educational and health infrastructure to support the additional homes.

Ensure that the additional housing is welcomed and appropriate not excessive and damaging to the green belt.

**Officer Response:**

Support for the land to the east of Martyrs Lane and opposition to building on Upshot Lane fields is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Customer Name:** Alison Jackson

**Summary of representation:**

Opposed to large scale urban development on green belt open space when there is insufficient capacity for this kind of development and the traffic problems and environmental impact it will bring, and the impact it will have on local residents.

Green Belt  
Urban Sprawl and Fair Oaks  
Flood risks  
Transport – Roads  
Transport – Public  
British Geological Survey  
Achieving Sustainable Development  
Infrastructure  
Wildlife  
Woodlands

There is also large proposed developments Sheerwater development, Fair Oaks Surrey Heath, in Ottershaw, Runnymede and McLarens are due to build a 3rd building which will increase traffic.

The landscape assessment, Green Belt review of the area and Hankinson Duckett Report provide evidence for suitability.

**Officer Response:**

The Council's response on the following matters Green Belt, Urban Sprawl and Fair Oaks, Flood risks, Transport – Roads, Transport – Public, British Geological Survey, Achieving Sustainable Development, Infrastructure, Wildlife, Woodlands and landscape can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 02510/1/001  
**Customer Name:** Mr Anthony Urwin

### **Summary of representation:**

The proposal will result in urban sprawl, especially with the proposals at Fair Oaks and Longcross.

Impact on roads which are already congested and at capacity. The additional cars and increased flow from the Fair Oaks Garden Village Plan would impact an already congested road network. Any road network development that would alleviate any increase in traffic flow would not preserve the setting and character of the area.

Impact on emergency service response times from St Peters Hospital.

Local Infrastructure to support such a development could not be delivered and therefore would overload the existing facilities. Developments on this scale, in addition to the development at Fair Oaks would inevitably saturate local services such as hospitals, rail services and schools which already have lengthy waiting lists.

WBC would need to take on a substantial financial burden to fund any development of existing or new infrastructure to support GP surgeries, school and local hospitals.

There are zone 2 and 3 flood risk areas within the Site Allocations Plan boundary, developing the entire site would vastly increase the flood risks not only within the area but the contiguous areas. Flood events will become more frequent as greenbelt is removed and run off from new properties increases.

Flood risk assessments must be carried out but there are other areas within WBC where flood risk is much lower and distributed over a wide area would be much more suitable for development.

New Zealand Golf Course has a unique environment and home to protected animals.

Replacing the mature trees and open heathland with concrete would irreversibly change the very character of the area.

The area itself is characterised in the name 'Woodham', by a mix of Woodland and Tree Lined roads.

House affordability crisis – Building on the Green Belt to meet housing shortage is only part of the problem and not the major contributor. The larger part of the housing affordability crisis is related to the demand side by low interest rates, government policies and incentives for Buy To Let, the banking system and the housing and mortgage market.

Population distribution and urban densities should be looked at compared to other cities. Vacant properties and brownfield sites could provide homes instead of building new ones.

A failure of Government to ensure a better dispersion of development has encouraged inward migration to the South East of England and increase demand for property in localised regions of the UK.

The proposed site is adjacent to Horsell Common which is designated a Site of Special Scientific Interest, forms part of the Thames Basin Heaths Special Protection Area and is part of Natura 2000. Residential development on the scale proposed will cause a significant disturbance to the breeding of rare bird populations.

In conjunction with the adjacent development proposal at Fair Oaks and the Sheerwater development, priority should be given to development in areas where ecological harm can be avoided and the need for mitigation reduced.

#### **Officer Response:**

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper (see Sections 1 and 2). The Topic Paper also explains how the brownfield sites of the Borough were prioritised for assessment (see Section 11).

The Council's response to urban sprawl and Fair Oaks, transport and traffic, infrastructure and funding, flooding, woodland and wildlife can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

The Council will work with the Clinical Commission Groups to see how well provision could be aligned to the proposed development to avoid unacceptable standards of provision in the area.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy.

Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The Council notes the reasons given for the housing crisis as set out in the representation. It should be noted that these issues are outside the scope of the planning process and are closely linked to the wider UK economy and national policies set by central Government, such as buy-to-let policies. Nevertheless, the strategic Housing Market Assessment (2015) (SHMA) clearly sets out the housing need in the borough. This identified housing need has informed the Core Strategy and the Council is fully committed to its comprehensive delivery. The Site Allocations DPD is an important delivery mechanism that will help deliver the aims and objectives of the Core Strategy.

As set out in the Core Strategy, in particular policy CS1: A spatial vision for Woking Borough; CS2: Woking Town Centre and CS3: West Byfleet District Centre; the Council will support high density development in the town and district centres as they offer good access to existing services and facilities. The Core Strategy also contains policies to ensure that development across the Borough reflects local character and is of an appropriate density. The Design SPD sets this out in greater detail, and new development should comply with these guidelines in order to be supported.

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The largely derelict land which is east of Martyrs Lane and north of New Zealand Golf Course would be able to fully supply the 1024 houses

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Unlike the other site allocations, such as the two large fields either side of Upshot Lane at the top of the Pyrford Escarpment, the land to the east of Martyrs Lane does and has already had building development and non-agricultural usage.

Pyrford fields are used for farming

Developing the land to the east of Martyrs Lane will be recycling derelict land that is barely used

The land east of Martyrs Lane is not well-used amenity for all the people of the Borough.

The Pyrford escarpment fields, are very much a well-used amenity for all people from across the Borough

Unlike the Pyrford fields the land east of Martyrs Lane is not heritage land, and has never been deemed to be. This contrasts with all the highly regarded Conservation land immediately adjacent to Upshot Lane and its two large, open fields i.e. Pyrford Common, Pyrford Village Conservation, Pyrford Court and the Aviary Road Conservation Area.

The land east of Martyrs Lane is not rural green belt and therefore does not provide the open countryside and farmland between hamlets and villages that the Pyrford fields do i.e. between the ancient Norman church of St Nicholas and Church Farm leading up to Upshot Lane and the entrance into Pyrford Village.

The landscape of east of Martyrs Lane is not protected by Woking Core Strategy policy whereas under CS24 the Pyrford fields are already deemed important to protect as 'escarpment and rising ground of landscape importance'.

The A320 Chertsey Road and the nearby A245 Woodham Lane already provide the land east of Martyrs Lane with arterial road infrastructure, bus routes and easy access to the M25 and into

Woking Town Centre for the railway station and this can be expanded if needs be. This is not the case for the small, narrow lanes and roads leading up to the Pyrford fields.

Would provide one real, contained community of mixed housing, providing affordable housing, rented, shared ownership, help to buy and fully owned homes for the Borough.

New facilities could be built such as a much needed Doctor's surgery and a new Junior School to meet growing capacity would all help the Borough in the future rather than adding to already sorely overstretched amenities.

#### **Officer Response:**

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the

A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full

and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The largely derelict land which is east of Martyrs Lane and north of New Zealand Golf Course would be able to fully supply the 1024 houses

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Unlike the other site allocations, such as the two large fields either side of Upshot Lane at the top of the Pyrford Escarpment, the lane to the east of Martyrs Lane does and has already had building development and non-agricultural usage.

Pyrford fields are used for farming

Developing the land to the east of Martyrs Lane will be recycling derelict land that is barely used

The land east of Martyrs Lane is not well-used amenity for all the people of the Borough.

The Pyrford escarpment fields, are very much a well-used amenity for all people from across the Borough

Unlike the Pyrford fields the land east of Martyrs Lane is not heritage land, and has never been deemed to be. This contrasts with all the highly regarded Conservation land immediately adjacent to Upshot Lane and its two large, open fields i.e. Pyrford Common, Pyrford Village Conservation, Pyrford Court and the Aviary Road Conservation Area.

The land east of Martyrs Lane is not rural green belt and therefore does not provide the open countryside and farmland between hamlets and villages that the Pyrford fields do i.e. between the ancient Norman church of St Nicholas and Church Farm leading up to Upshot Lane and the entrance into Pyrford Village.

The landscape of east of Martyrs Lane is not protected by Woking Core Strategy policy whereas under CS24 the Pyrford fields are already deemed important to protect as 'escarpment and rising ground of landscape importance'.

The A320 Chertsey Road and the nearby A245 Woodham Lane already provide the land east of Martyrs Lane with arterial road infrastructure, bus routes and easy access to the M25 and into

Woking Town Centre for the railway station and this can be expanded if needs be. This is not the case for the small, narrow lanes and roads leading up to the Pyrford fields.

Would provide one real, contained community of mixed housing, providing affordable housing, rented, shared ownership, help to buy and fully owned homes for the Borough.

New facilities could be built such as a much needed Doctor's surgery and a new Junior School to meet growing capacity would all help the Borough in the future rather than adding to already sorely overstretched amenities.

#### **Officer Response:**

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the

A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. **Summary of representation:**

Objects to the proposal for the use of the land to the east of Martyrs Lane, instead of the draft sites in Byfleet, Mayford & Pyrford.

Proposed development in West Byfleet at Broadoaks, West Byfleet centre is to be redeveloped, and Sheerwater. All this house building needs proposals for more infrastructure.

Also nearby is the proposal to build houses on Fair Oaks airfield.

The impact on West Byfleet was not mentioned in your document, but would change it radically by all this development.

This would see a lot of the present open land around disappear with an almost continuous spread of houses. It will impact hugely on the infrastructure & the environment.

The roads are already congested along the Sheerwater Road & Woodham Lane

The loss of the green areas would affect the quality of the air.

**Officer Response:**

Objects to the proposal for the use of the land to the east of Martyrs Lane, instead of the draft sites in Byfleet, Mayford & Pyrford.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

**Contributor Reference:** 02592/1/001  
**Customer Name:** Mr Stuart Jarvis

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt. Strongly objects to any development on Greenbelt as it has detrimental environmental effects as well as on living standards wherever it occurs. The approach of Central Government to "unprotect" protected land is totally reprehensible and makes a mockery of planning and general laws in this country.

However, on balance, I am in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land

to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02543/1/001  
**Customer Name:** Mr And Mrs David And Marianne Eliot

**Summary of representation:**

Although all the sites which are been discussed are in Greenbelt

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

A single site would be better for the cohesive planning of the infrastructure, sewage, water, schools, doctors, social housing.

The Northern part of the site already has good access to major roads and access to public transport. This would minimize the added congestion, which over 1000 new homes will unavoidably bring

The northern part of the site is council owned

The site is used for non-agricultural purposes

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Customer Name:** Mr Tim Cockrill

**Summary of representation:**

Not totally opposed to the use of the Upshot Lane fields for housing development if the appropriate infrastructure is there to support the development. Understands and sympathise with the need to create more housing but this needs to take account of the infrastructure and respect the environment.

Our preference would be for the development of Martyrs Lane as a single site as we think this site could accommodate the requirements for affordable homes and the educational and health infrastructure to support the additional homes.

Ensure that the additional housing is appropriate not excessive and damaging to the green belt.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

### **Summary of representation:**

Martyrs Lane site is a suitable substitution to Upshot Lane Pyrford

#### Previously Developed Site

Pyrford's unique semi rural setting is largely unspoilt with open views south and escarpment.

The two fields have been farmed and the distinctive character of the area highlighted in the Pyrford Neighbourhood Plan.

3 sites to the north of the golf course are almost unused, partly pre-developed and derelict. There is no landscape element, no known footpaths and the public seem not to use it.

planning permission was previously granted to The factory was cancelled but the work done to demonstrate its viability as a factory stands and the building of houses is viable instead.

The land still retains several former Army buildings, disused sports fields and general debris, including scrap cars. The SCC waste site ( to be retained ) has a derelict 7 hectares at the rear.

The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked. Instead our two fields plus land in Mayford/Hook Heath and Byfleet were advanced as the recommended sites for release from Green Belt.

1024 Dwellings required not 900 to 3500.

#### Building on NZGC is Not Necessary

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character.

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations.

Economies of Scale – One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure

Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by 6 separate sites.

Affordable homes – land values of northern sites are much less than the 6 original sites suggested and this facilitate the provision of Affordable Housing.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

The selection of Martyrs Lane would allow new and efficient infrastructure to be put in place

Also there would be less disruption to existing communities than with the original 6 sites.

Current proposals for West Byfleet area pre-2027 from Sheer House, Broadoaks and West Hall which will result in approximately 950 new homes.

Road Congestion – Summary information compiled from the Surrey County Council (SCC) traffic reports would have less impact on traffic conditions than the development proposed. These traffic studies suggest Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

Road Links – The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet.

Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is close to theoretical maximum.

Traffic Access – The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

Healthcare – The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Schooling – Pyrford CofE Primary School is already full and has taken many pupils from the Maybury area, Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Public transport – Martyr's lane already has better bus services than other sites.

Amenity value – Green Belt land in Pyrford is very accessible and actively used. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public despite it's Green Belt status.

Heritage – Aviary Road Conservation Area and the network of ancient footpaths. The two fields are integral to the heritage setting of the area.

Martyrs Lane has limited public footpaths through the area and has no known heritage value.

Well contained by Urban Boundaries to north and west and if northern 3 sites selected then golf course to south is thought to be good retainable green space. Entire 112 hectares provides a viable new Green Belt Boundary but there is no requirement to allocate all land for housing.

No local nor national landscape designation on the Martyrs Lane site.

No listed buildings on the 3 northern sites and there is no known heritage value to the land on Martyrs Lane to the north of NZGC.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of the 6 original sites safeguarded sites.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that

the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response

to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

If the Council were to decide to safeguard this site or any of the other sites, its development will take into account any development proposals in the vicinity of the site.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Customer Name:** Mr Jonathan Blissett

### **Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

#### **Previously Developed Site**

Pyrford's unique semi rural setting is largely unspoilt with open views south and escarpment.

The two fields have been farmed and the distinctive character of the area highlighted in the Pyrford Neighbourhood Plan.

3 sites to the north of the golf course are almost unused, partly pre-developed and derelict. There is no landscape element, no known footpaths and the public seem not to use it.

planning permission was previously granted to The factory was cancelled but the work done to demonstrate its viability as a factory stands and the building of houses is viable instead.

The land still retains several former Army buildings, disused sports fields and general debris, including scrap cars. The SCC waste site ( to be retained ) has a derelict 7 hectares at the rear.

The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked. Instead our two fields plus land in Mayford/Hook Heath and Byfleet were advanced as the recommended sites for release from Green Belt.

1024 Dwellings required not 900 to 3500.

#### **Building on NZGC is Not Necessary**

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character.

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations.

Economies of Scale – One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure

Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by 6 separate sites.

Affordable homes – land values of northern sites are much less than the 6 original sites suggested and this facilitate the provision of Affordable Housing.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

The selection of Martyrs Lane would allow new and efficient infrastructure to be put in place

Also there would be less disruption to existing communities than with the original 6 sites.

Current proposals for West Byfleet area pre-2027 from Sheer House, Broadoaks and West Hall which will result in approximately 950 new homes.

Road Congestion – Summary information compiled from the Surrey County Council (SCC) traffic reports would have less impact on traffic conditions than the development proposed. These traffic studies suggest Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

Road Links – The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet.

Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is close to theoretical maximum.

Traffic Access – The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

Healthcare – The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Schooling – Pyrford CofE Primary School is already full and has taken many pupils from the Maybury area, Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Public transport – Martyr's lane already has better bus services than other sites.

Amenity value – Green Belt land in Pyrford is very accessible and actively used. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public despite it's Green Belt status.

Heritage – Aviary Road Conservation Area and the network of ancient footpaths. The two fields are integral to the heritage setting of the area.

Martyrs Lane has limited public footpaths through the area and has no known heritage value.

Well contained by Urban Boundaries to north and west and if northern 3 sites selected then golf course to south is thought to be good retainable green space. Entire 112 hectares provides a viable new Green Belt Boundary but there is no requirement to allocate all land for housing.

No local nor national landscape designation on the Martyrs Lane site.

No listed buildings on the 3 northern sites and there is no known heritage value to the land on Martyrs Lane to the north of NZGC.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of the 6 original sites safeguarded sites.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that

the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response

to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

If the Council were to decide to safeguard this site or any of the other sites, its development will take into account any development proposals in the vicinity of the site.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Contributor Reference:** 02558/1/001  
**Customer Name:** Ms Jane Messenger

**Summary of representation:**

The site is big enough to accommodate 1200 houses, including affordable housing, and the necessary infrastructure of shops, primary schools, health centre, etc., without encroaching on the golf course.

It is much easier to create the associated infrastructure rather than overloading existing facilities.

It will also simplify the process for obtaining planning permission.

There are major employers close by: St Peter's Hospital, the Animal and Plant Health Agency, and McLaren Technology Centre.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking town centre and the mainline railway station to the south without encountering the traffic delays where roads cross railway lines. Bus routes and cycle routes, including to Woking town centre, exist already.

There is little development along the A320 north of Woking, making road widening relatively easy if necessary.

Although in the green belt, the site has no other national or local landscape designation unlike some of the other proposals.

North of the golf course the land is largely disused and derelict and planning permission has previously been given

it should be possible to build all the properties necessary, even if it subsequently turns out that more than 1200 are needed, or if there is a further requirement post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 02565/1/001

**Customer Name:** Jo Caruth

### **Summary of representation:**

Difficult consultation as all sites are within the Green Belt but, on balance, I am in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

The Brett report also considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

In addition, the Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. This is supported by The Surrey Landscape Character Assessment and Pyrford Neighbourhood Plan.

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations. The site has been partially developed in the past and has included both military and civilian dwellings

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall

total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the

references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02562/2/001  
**Customer Name:** Ms Lynne Mullin

**Summary of representation:**

Objects to the proposed development of the area including Martyrs Lane and New Zealand golf course.

Objects to the compulsory purchase of Green Belt land.

Increasing urbanisation and population density in a area that is saturated, particularly with the other new developments, Longcross already in progress and the proposed site of Fair Oaks.

The public services such as schools, medical facilities and roads are struggling to cope now without another minimum of 3500 homes in the area.

The quality of life for people living in the Woking Borough Council area will become very unpleasant.

I accept that new homes are needed. However this objection is not a case on 'not in my back yard' but more of a case of far too much in one place, in an area that is already struggling to cope and taking valuable green belt away.

**Officer Response:**

Objection to the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to

enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in

Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02584/1/001  
**Customer Name:** Mr Chris Goddard

### **Summary of representation:**

The representation considers that development of the land to the east of Martyrs Lane would have a detrimental impact on the quality of life for existing residents of Woking.

Increased traffic (private car usage). The site is isolated geographically and development of the site would result in significantly increased levels of private car usage. The vast majority of journeys to work, schools, shops, doctors, rail stations etc will surely need to be made by car.

This is not sustainable and will increase CO2 emissions as well as other air pollutants in the borough. The adjacent Woodham Lane (A245) and A320 are already congested

Biodiversity will be reduced in the borough by the eradication of habitat. The site is surely a priceless corridor for animal species, linking Horsell Common and tributaries to The Bourne river.

Urban sprawl. The areas of West Byfleet/Byfleet/Brooklands/New Haw/Addlestone/Weybridge are increasingly merging into a concrete jungle.

### **Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various

development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites. In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

A key thrust of the transport policies of the Core Strategy and the NPPF are to influence a shift from car based travel to sustainable travel modes such as public transport, walking and cycling.

The overall spatial strategy of the Core Strategy is to concentrate most new development at the main centres because they offer a range of key services and facilities to help minimise the need to travel and to encourage sustainable travel modes. Specific references are made to Policies CS1: A spatial strategy for Woking Borough and CS18: Transport and accessibility of the Core Strategy which clearly demonstrate the importance that the Council places on encouraging walking and cycling. These policies have been scrutinised at Examination and

judged to be in conformity with the NPPF. In addition to the policies of the Core Strategy, a key objective of the Council's Parking Standards is to use parking provision as a tool to encourage walking and cycling, in particular, at locations where key services and facilities are readily available without undermining economic vitality. Policy CS18 of the Core Strategy makes this point very clear.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- Woking Green Belt review (2013) by Peter Brett Associates; and
- Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

**Contributor Reference:** 02586/1/001

**Customer Name:** Chris Garratt

**Summary of representation:**

Objects to the proposal to develop housing on the Upshot Lane Fields and supports the Martyrs Lane site.

The Martyrs Lane land has previously been developed

Existing transport links, compared with Pyrford where transport is already stretched, and it is a more rural area having been used for agriculture for decades and in the Green Belt.

Economies of scale of one site

The Pyrford area infrastructure is also already stretched and the School over subscribed whereas the Martyrs Lane land will provide ample space to more efficiently locate a new school and health centre as well as the necessary supporting infrastructure.

**Officer Response:**

Objects to the proposal to develop housing on the Upshot Lane Fields and supports the Martyrs Lane site.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.  
Support the Martyrs Lane proposal excluding the New Zealand Golf Course.  
Planning permission was recently granted for the top part of the site.  
The top part of the site is previously developed land and semi-derelict.  
The northern site is publicly owned land so the sale would help council tax payers  
It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site then by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mrs Barbara Roddy

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.  
Support the Martyrs Lane proposal excluding the New Zealand Golf Course.  
Planning permission was recently granted for the top part of the site.  
The top part of the site is previously developed land and semi-derelict.  
The northern site is publicly owned land so the sale would help council tax payers  
It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site than by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02598/1/001  
**Customer Name:** Mr Bernard Blake

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.  
Support the Martyrs Lane proposal excluding the New Zealand Golf Course.  
Planning permission was recently granted for the top part of the site.  
The top part of the site is previously developed land and semi-derelict.  
The northern site is publicly owned land so the sale would help council tax payers  
It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site then by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part of the site is previously developed land and semi-derelict.

The northern site is publicly owned land so the sale would help council tax payers

It is close to major employers and used for non-agricultural purposes

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

Fewer residents will be disrupted by one site than by six individual sites.

Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Peter Howden

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site. There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

Over the last thirty years, the congestion in the area has become worse and worse. Traffic will be considerably worsened by this development and there is land, not green belt, elsewhere in the country that should be used, rather than keep building here.

Some of the green belt in Pyrford and Woking is near sites of historic interest or historic woodland and as has been the case in the past, building should not be allowed near these sites.

Finally, to reiterate, is in favour of substituting one safeguarded site for the six currently identified safeguarded sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development. This assessment would take historic traffic trends into account, in forecasting future traffic impacts.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is

submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the landscape and amenity features of the sites in Pyrford are highly valued, as set out in the representation, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy, the Development Management Policies DPD and the Pyrford Neighbourhood Plan include robust policies to protect heritage and local landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise these assets. This includes design policies, which ensure any new developments are designed and masterplanned in such a way that maintain the character of the area in which they are situated.

It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Ms J Mulvany

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02572/1/001

**Customer Name:** Mrs E C Jones

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt, but support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part of the site includes previously developed land and is now semi–derelict.

The northern site is publicly owned land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non–agricultural purposes.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02587/1/001  
**Customer Name:** Mr P T Harvey

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Councils to provide this. The Martyrs Lane site has the least favourable impact on the local community.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Positive aspects of Martyrs Lane site include:

One self-contained site can provide sufficient homes, including affordable and social housing, to meet Government requirements;

Economies of scale and less disruption in providing required utilities;

Large enough to enable infrastructure needs to be met e.g. a school and medical facilities;

Least impact on road congestion and traffic flow – close to A320 and easy access to Town Centre, Chertsey and M25;

Well served by public transport;

Publicly owned land thus reducing cost to the Borough and citizens;

Includes previously developed land.

Negative aspects of original sites:

Disruption to public;

Inadequate infrastructure provision in six small, disparate sites;

destruction of agricultural land;

Increased traffic flow on Old Woking Road and Parvis Road, in addition to that from West Hall and Broadoaks;

Lack of affordable and social housing provision.

**Officer Response:**

Supports the Martyrs Lane proposal excluding the New Zealand Golf Course is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of at least 1,024 new homes (the Council has identified the site to meet the minimum need of 1,200 homes). Cumulatively it is also true that the original six sites could deliver a similar amount of new homes, and meet Government requirements. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future

development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council continues to work with infrastructure providers, such as Surrey County Council as education and highways authority, to assess capacity of existing infrastructure, and provide new facilities where needed, as well as identify sources of funding.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts, including taking into account those impacts from current development proposals such as Broadoaks and West Hall. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst it is acknowledged that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Contributor Reference:** 02632/1/001  
**Customer Name:** Ms Genevieve Thompson

**Summary of representation:**

Supports the proposal.

All housing and infrastructure can be contained on one site, with enough room for 1,200 houses (including affordable housing, and housing which provides for all sectors of the local population), shops, school and health centre.

Good transport and road links e.g. bus routes, A320 and nearby M25.

Presumption for development as part has been given planning permission and there are no national or local landscape designations.

Nearby to major employers.

Would provide for Woking's future Traveller needs.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Whilst there are good links to main roads, there are likely to be traffic impacts. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation highlights the availability of bus routes. However, public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Regarding the representation on landscape designations, should the original sites be safeguarded, development proposals will be expected to take into account landscape designations in their designs. The Council is confident that the overall integrity and purpose of the Green Belt would be retained. The Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the constraints of the sites. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of

Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. Policies in the Development Plan for the area would ensure that a suitable housing mix is provided at any of the sites under consideration, which will meet the housing needs of the area. In these particular regards, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

**Contributor Reference:** 02575/1/001  
**Customer Name:** Ms Diane Wiltshire

**Summary of representation:**

Supports the proposal, in favour of Pyrford fields.

The fields command a lovely view, is good agricultural land for growing crops in the future, and retain a sense of open space and rural aspects for the community. This Green Belt land – in an area of beauty – must be preserved. Development here would lead to congestion on country roads and result in costly road improvements. Instead, the fields should be designated as open spaces for Pyrford children to play in, or people to walk in.

One site is preferable to six sites. The site is already used for McLarens' huge complex and a previously developed army camp, so it has already lost its Green Belt status in essence.

It is large enough to accommodate 1200 houses, even if it needs draining in part.

It has good access to main roads leading to Town Centre and M25.

The utilities have been laid.

It would upset fewer residents and provide much needed homes in a pleasant area.

**Officer Response:**

Support is noted.

Regarding the representation on the landscape qualities of the Pyrford sites, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation regarding the Pyrford sites are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close

to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst Officers accept that the landscape and amenity features of the sites in Pyrford are highly valued, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy, the Development Management Policies DPD and the Pyrford Neighbourhood Plan include robust policies to protect heritage and local landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise these assets. This includes design policies, which ensure any new developments are designed and masterplanned in such a way that maintain the character of the area in which they are situated. Development at the Pyrford sites could potentially bring with it opportunities to provide new infrastructure such as play areas for children or improved walking routes.

It should also be noted that as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings (but not the McLaren buildings – these are outside the site area). These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The opinion in the representation regarding Green Belt

status of the land is noted; nevertheless, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The accessibility of the site to main roads is noted, however, the traffic impacts of such a proposal would need to be considered. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the proposal regarding infrastructure provision, such as utilities, are noted and will weigh in the balance of considerations by Members. To ensure sustainable development,

the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. Section 3 of the Regulation 18 consultation Issues and Matters Topic Paper explains how adequate infrastructure would be provided to support developing on the originally proposed sites, including transport infrastructure.

**Contributor Reference:** 02573/1/001  
**Customer Name:** Mr Alan Wiltshire

**Summary of representation:**

Supports the proposal, in favour of Pyrford fields.

The fields command a lovely view, are good agricultural land for growing crops in the future, and retain a sense of open space and rural aspects for the community. This Green Belt land – in an area of beauty – must be preserved. Development here would lead to congestion on country roads and result in costly road improvements. Instead, the fields should be designated as open spaces for Pyrford children to play in, or people to walk in.

One site is preferable to six sites. The site is already used for McLarens' huge complex and a previously developed army camp, so it has already lost its Green Belt status in essence.

It is large enough to accommodate 1200 houses, even if it needs draining in part.

It has good access to main roads leading to Town Centre and M25.

The utilities have been laid.

It would upset fewer residents and provide much needed homes in a pleasant area.

**Officer Response:**

Support is noted.

Regarding the representation on the landscape qualities of the Pyrford sites, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation regarding the Pyrford sites are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. **Contributor Reference:** 02628/1/001  
**Customer Name:** Ms Carol Morton

**Summary of representation:**

Development in Pyrford will increase air pollution including that from traffic. Traffic has already reached capacity in the area.

Breathing is a problem.

The Pyrford sites produce food and this should be considered.

Wildlife is important.

**Officer Response:**

Objection to development in Pyrford is noted.

The social and environmental implications of development, regardless of whether it is in Pyrford or elsewhere in the borough, will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are

classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

During the preparation of the Site Allocations DPD the Council consulted with Natural England on the biodiversity value of each of the proposed sites. Overall the preferred sites did not raise any objection from Natural England based on existing biodiversity features that could not be addressed.

Nevertheless a number of the proposed allocations will require a detailed ecological survey as a key requirement to assess and address any site specific ecological issues. This will help determine how development is managed on the site.

The Council is committed to conserving and protecting existing biodiversity assets within the Borough. Outside of designated important sites and habitats, the Council will encourage new development to make positive contribution to biodiversity through the creation of green spaces and the creation of linkages between sites to create a biodiversity network of wildlife corridors and green infrastructure. This is clearly set out in Core Strategy Policy CS7: Biodiversity and nature conservation. In addition to this the Council will consult with the relevant biodiversity organisations including Surrey Wildlife Trust and Natural England during the detailed planning application stage as well as require applicants to carry out prior assessments of the site to provide information on species and habitats, as set out in the site specific key Requirements. This will ensure the effective avoidance and or mitigation of any adverse effects prior to approval of the development.

**Customer Name:** Sport England

### **Summary of representation:**

Sports England seeks to protect against the loss of sports facilities including playing pitches unless exceptional circumstances as set out in paragraph 74 of the NPPF apply. The land east of Martyrs Lane is used for sports, including the New Zealand Golf Course and the sports facilities at Woodham Sports Club. The proposed safeguarding of the site would lead to the loss of the existing sports facilities on the site. One of the criteria to meet to justify the loss of a facility is 'a carefully quantified and documented assessment of current and future needs has demonstrated to the satisfaction of Sports England that there is an excess of playing field provision in the catchment and the site has no special significance to the interests of sports. Sports England is aware of the Council's Playing Pitch Strategy. The strategy does not identify the Woodham Sports Club as part of the strategy to meet current and future needs because it is disused. Sports England is still likely to object to any proposals which would lead to the loss of disused playing field unless any of the exceptions would apply. Sports England has consulted England Golf (the national government body) on the proposed loss of the Golf Course. England Golf has confirmed that the Golf Course is home to the New Zealand Golf Club and New Zealand Artisans Golf Club. England Golf has undertaken an analysis of the catchment area for golf within Woking Borough and considers that the demand for golf in the area exceeds the average demand for golf within the South East region across all its 9 user/player groups and provides a mixed offer for different categories of golfer from the formal offer of traditionalists through to the informal offer for more casual players. No robust assessment has been done by the Council to demonstrate that the golf course is surplus to requirements as required by the NPPF. On the basis of the above, Sports England objects to the proposal to safeguard the land east of Martyrs Lane for future development.

### **Officer Response:**

The Council fully appreciates the need to meet the requirements of paragraph 74 of the NPPF, in particular, the need to protect existing open space, sports and recreational buildings and land unless an assessment has been undertaken which has clearly shown the open space, buildings or land is surplus to requirement. The Council has its own locally specific policy which establishes the importance of sports facilities to the wellbeing of the community and the need for their protection and provision where needed. Policy CS17: Open space, green infrastructure, sports and recreation of the Core Strategy establishes a presumption against any development that would involve the loss of a sport, recreation or play facility except where it can be demonstrated that there is excess of provision, or where alternative facilities of equal or better quality will be provided as part of the development.

The Council has recently adopted its Playing Pitch and Outdoor Sports Facilities Strategy (April 2017). The Woodham Sports Club is not identified to meet current or future needs of the area. The strategy demonstrates that there is no evidence of demand for additional outdoor courts. Latent demand exists, but this demand could be met by protecting and enhancing existing

provision. In making this recommendation, the strategy had taken into account that the disused Woodham Sports Club will not be enhanced or redeveloped to contribute towards meeting the future needs. In accordance with the strategy, the Woodham Sports Club would be surplus to requirement. The landowner has confirmed her support for the land to be used to meet future housing needs, and is promoting the land as such. There is no expectation at this stage that the facilities will be restored to a useable state. Based on the above there is sufficient evidence to justify its alternative use. It will be unreasonable in this circumstance to retain a disused facility with no prospect for its restoration when the Playing Pitch Strategy does not expect it to make any contribution towards future need. Its retention will be contrary to the efficient use of land. It is important to stress that Policy CS17 requires all development to contribute towards the provision of outdoor sports facilities. If the land is safeguarded appropriate contribution will be sought towards enhanced outdoor sports facilities. The Council's Regulation 123 List makes open space and recreational facilities a priority to benefit from CIL funding. This can be planned as an integral part of the proposed development on site or contributions could be made to provide alternative facilities at a location that is accessible to users or to enhance existing facilities where maximum benefits could be achieved.

The Council has not carried out any bespoke study to assess the demand for golf in the area. Similarly, the Playing Pitch Strategy does not include any information on demand for golf. Without this evidence, it would be difficult to predict with confidence that the New Zealand Golf Course is surplus to requirement. Based on local knowledge, the Council is aware that this particular Golf Club is operational and heavily subscribed. In this regard, the requirements of Policy CS17 would apply if the site has to be safeguarded for an alternative use. The owners of the New Zealand Gold Club have confirmed that the club is heavily subscribed and has been thriving for over 120 years. Based on local knowledge, there is no reason to doubt that. Sports England's research demonstrates that there is demand for golf in the area and the demand exceeds the general demand in the South East Region. Whilst the Council accepts the analysis by Sports England about the demand for golf in the area, it would also have been helpful if the analysis emphasised whether the supply of golf facilities are sufficient to meet the demand. For the size and population of Woking Borough, there are presently 11 good sized golf courses in the area. From the available information, it is clear that the proposal would lead to the loss of an existing operational sports facility with a history to protect when there is a presumption against the loss of such facilities. This is a key consideration to inform the decisions of the Council.

The overall goal for the Site Allocations DPD is to contribute towards achieving sustainable development. In this context, the Council will have to decide whether there are overriding benefits for the common good of the community to safeguard this particular land for future development needs which will far outweigh the benefits for retaining the facility at this particular location, recognising that the land will not be available and the Council might have to use its compulsory purchase powers to acquire it.

**Contributor Reference:** 02629/1/001

**Customer Name:** A J Pratt

### **Summary of representation:**

Woking Borough Council has been very protective of the Green Belt. It is important as it defines the urban area and stops further development and expansion.

Development has been proposed on the Green Belt in Pyrford before and resisted by residents and the Council. There is great local opposition to develop this fields. They form part of the southern boundary and should stay as Green Belt. The infrastructure in the area is at capacity such as water, sewage, gas. The road network is also at capacity and results in congestion. Development in Byfleet or Pyrford would have local impacts on the road network.

The Martyrs Lane site is on the A320 to Woking, Addlestone, Chertsey and the M25. These towns also have railway stations.

The A320 has all the main services in it.

Part of the site has been previously developed and granted planning permission for a technology centre.

Part of the site is also publicly owned land and much of it has been used for non-agricultural purposes.

There is no public access to the land.

A single site would provide some economies of scale to deal with the infrastructure issues.

A number of bus routes use the A320 to Woking and connects the site to major local employers.

Fewer residents will be impacted than six individual sites.

The New Zealand Golf Course should not be included in the development and kept as green space.

Support the Martyrs Lane proposal.

### **Officer Response:**

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Sections 1.0 and 2.0, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. Overall the Council is seeking to remove around 3.5% of the Green Belt to meet development needs up to 2040. By removing this amount of land from the Green Belt, the Council is seeking to protect the overall purpose and integrity of the borough's Green Belt.

Objection to development proposals in Pyrford are noted.

Regarding the representation on urban boundaries, the Green Belt boundary review report provides sufficient evidence that the release of the proposed allocated sites from the Green Belt will enable a defensible boundary to be drawn that will ensure over a long period of time

beyond the Core Strategy period. Where the recommendations of the report had not been accepted by the Council, a clear reason has been given in the draft Site Allocations DPD. The proposed safeguarded sites in Pyrford would be defined by Pyrford Common Road and Church Hill to the south and the public footpath to the east of the site known as GB13.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council has also consulted with the relevant utility providers to ensure that there is no adverse impact on utility provision as a result of development.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding traffic and congestion in Pyrford has been addressed in paragraph 3.6 of the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the road infrastructure merits of the Martyrs Lane site, as set out in the representation, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties.

Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that much of the site has already been used for non-agricultural uses, this can also be said for the majority of the original six sites. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the representation states that the New Zealand Golf Course should not be developed, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Support for the Martyrs Lane proposal is noted.

**Contributor Reference:** 02602/1/001  
**Customer Name:** Miss S M Argent

**Summary of representation:**

Wrote previously that the two sites on Upshot Lane should be protected from development. They are cherished by local residents and visitors. The narrow roads in the area and overstretched facilities such as the school and parking would make this proposal impractical.

Supports the proposal for Martyrs Lane excluding the New Zealand Golf Course.

The top part of the site was granted planning permission for a technology centre and also includes previously developed land which is now semi-derelict.

The top part of the site is partly publicly owned so will help council tax payers.

Much of the top part of the site has been used for non-agricultural purposes.

A single site would offer economies of scale to deal with infrastructure issues including affordable housing.

The northern part of the site is well served by public transport unlike the other sites.

The site has access to the A320 with links to the M25 and Woking town centre.

The site is close to major employers.

Fewer residents will be impacted by one site than the six individual sites.

**Officer Response:**

Objection to development proposals in Pyrford and support for the Martyrs Lane site is noted.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The representation regarding infrastructure has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In particular Section 3.0.

Whilst the representation states that the New Zealand Golf Course should not be included in the site area, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that much of the site has been used for non-agricultural uses, this can also be said for the majority of the original six safeguarded sites. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the

development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02596/1/001

**Customer Name:** P L Serwent

**Summary of representation:**

Objects to development proposals in Pyrford and supports the Martyrs Lane proposal.

Development in Pyrford would take place on more than one site, resulting in disruption to several residential areas and delays on adjacent roads. Martyrs Lane would involve far less disruption.

The construction of buildings on split sites would increase the cost of any proposed development.

Access to Martyrs Lane is easier compared with the sites in Pyrford, taking into account nearby residential areas and pressing local infrastructure issues such as education and healthcare provision.

**Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane proposal is noted.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there could be some financial benefit to developing one site rather than individual sites, the overriding consideration for this particular consultation is to ensure that the most sustainable sites are identified and that any land removed from the Green Belt will not undermine its overall purpose and integrity.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. **Customer Name:** Mr Maurice Rubin

**Summary of representation:**

Concerned about removing the Green Belt status of the site. Green belt is precious and prevents unrestricted urban sprawl.

Development could also have an adverse impact on rare species of birds, namely the Dartford Warbler, Nightjar and Woodlark, together with other wildlife. The ancient woodlands on the site should be protected.

Previously Woking Council has been very supportive of the SPA and are at a loss to understand this change in approach. The Council should be lauding the importance of nature conservation.

The success of Heather Farm indicates a demand for open spaces for the residents of Woking. More housing will place additional pressure on an area which is the most frequently visited sites across the entire TBH SPA.

The Martyrs Lane site includes a substantial and strategic area of Common Land owned by Horsell Common Preservation Society.

The infrastructure in the area is insufficient to cope with the proposed development. Even if infrastructure were to be provided on site, the road network would be unable to cope. The Six Crossroads roundabout and A320 are already identified as congestion blackspots.

The purchase of the New Zealand Golf Course either on a compulsory or voluntary basis would increase the level of debt on the Council to an unsustainable level to the detriment of all local council tax payers.

**Officer Response:**

The representations regarding urban sprawl and the purposes of Green Belt, wildlife, ancient woodland, infrastructure provision and the impact on the road network have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Regarding the land ownership of the site, the Council has prepared a land ownership map of the land east of Martyrs Lane and is aware of the part of the land in the ownership of HCPS. It is not intended that this part of the site will be developed. It is included to ensure the defensible boundary of the Green Belt. To put it into context, the land in the ownership of HCPS is about 1.42 hectares (approximately 1.3% of the entire land). Most of the land is either Common Land, in Flood Zones 2 and 3 or within the SPA. The consultation document makes it clear that these areas will not form part of the developable area and therefore this will not compromise the delivery of the site to meet the Council's overall objectives.

The representation regarding the purchase of the New Zealand Golf Course is noted and will be one of the factors that has to weigh in the balance when the Council makes its decision on the matter.

The Council is aware of the close proximity of the site to Heather Farm and Horsell Common SPA. Natural England submitted representation in response to the consultation. It does not have any objection in principle to the safeguarding of the site and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed.

**Contributor Reference:** 02625/1/001  
**Customer Name:** Mayford Village Society

**Summary of representation:**

There are sufficient brownfield sites to meet the future housing needs without using Green Belt Land.

Support the Martyrs Lane proposal

The site is big enough to accommodate including affordable housing, Gypsy and Travellers sites, and the necessary infrastructure of shops, primary schools, health centre, etc. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

One larger site will simplify the process for obtaining planning permission.

It is close to major employers

access to the A320 onto the M25, airport and Woking Town Centre.

The site is well served by public transport

Although in the green belt, the site has no other national or local landscape designation unlike some of the other proposals.

Site is clear of Flood Zone 2 and Flood Zone 3 which makes the process easier

Planning Permission was previously given therefore presume the land is suitable for development

Can reach target for Affordable housing and Specialist Residential accommodation

Provide Gypsy and Travellers pitches to the East of Woking, would provide access to employment, schools, health services and shops. Would satisfy the Council's Core Strategy (2012), CS14. Could place 15 pitches and remove GB7.

The size of the site can satisfy housing post 2040

The redevelopment of Sheerwater can be taken into account

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);

- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

### **Summary of representation:**

Support for the Martyrs Lane proposal.

National policy states that brownfield and previously developed sites should be used first. Pyrford sites have been used for agriculture and are high quality agricultural land. They also form an essential part of Pyrford's environment.

Martyrs Lane was granted planning permission for a factory which is now no longer required. The site was also used for development and the area north of the New Zealand Golf Course consists of derelict buildings and uncared for woodland.

Part of the site is publically owned land so a sale would help Council tax payers.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required plus any infrastructure requirements.

Only one local improvement will be required in infrastructure.

The Pyrford sites have less justification for removal from the Green Belt than the Martyrs Lane site. They are agricultural land, part of the local rural character and are of benefit to the whole of Woking. Martyrs Lane is previously developed, unimportant and has no public access.

Pyrford houses would command a higher price and Martyrs Lane would enable the provision of low cost housing and benefit from being in close proximity to local employers.

Martyrs Lane is adjacent to a major road and roundabout. The utility services could be provided efficiently. The A320 would be able to cope with additional traffic than the roads in the east and south of the borough. The road also provides access to the M25, Woking and neighbouring towns.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

There are a number of walking and cycling routes in Pyrford unlike the Martyrs Lane site.

Significant development in West Byfleet, Pyrford and Mayford would change the nature of those areas whereas the Martyrs Lane site is well screened and development could be accommodated behind that screening.

Support the Martyrs Lane proposal as it will have the least impact on the borough and minimise disruption.

Surprised that this was not originally put forward as it has more benefits than the six original sites from a financial, disruption and aesthetic point of view.

### **Officer Response:**

Support for the Martyrs Lane proposal is noted.

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land for development, including safeguarding

land for future development needs, has been established in the Core Strategy and is consistent with National Planning Policy. In addition, it should be noted that the Site Allocations DPD contains over 50 sites within the existing urban areas of the borough. The Site Allocations DPD as well as the Core Strategy clearly state that land will only be released from the Green Belt for development from 2022 when it is anticipated that there will be insufficient brownfield land to meet housing needs. Overall the Council has considered and assessed about 125 sites across the Borough in preparing its Site Allocations DPD.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting

their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

As set out above, the Council has undertaken a number of landscape studies to determine the visual impact of development of all of the various Green Belt options and will be one of the key considerations that will inform the Council's decision on its preferred safeguarding option.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Customer Name:** Mrs J Cooper

**Summary of representation:**

Support Martyrs lane site as a single site excluding building houses on the New Zealand Golf Course.

It causes a great strain on all the community services.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. **Summary of representation:**

The representation does not agree that Green Belt land should be used for development.

Support the Martyrs Lane proposal

Planning permission was recently granted

Derelict building on site

Parts of the site has publicly owned land

non-agricultural land

There is currently no public right of way

The site is served by public transport

The road system has the potential to be improved

New housing in this area will have less impact than elsewhere

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding less impact to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Support the Martyrs Lane proposal

Planning permission was recently granted for the top part of the site.

Previously developed land

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues

The site is well served by public transport unlike the other sites.

access to the A320, the M25 and hospital

fewer residents will be disrupted by one site then by six individual sites

In contrast Pyrford fields are unique and have a semi rural setting, part of the escarpment, are farmed and the distinct character highlighted in the Pyrford Neighbourhood Plan.

The Pyrford schools are over subscribed

The adjacent roads are very busy

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. **Customer Name:** Mr Stephen J Barney

**Summary of representation:**

Objects to building on the Green Belt, the Pyrford fields are valuable.

The Martyrs Lane site is limited in size and is placed in a good location.

The current resources are stretched, the site could offer a new bigger health centre, first school and affordable housing.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined. Therefore, although property values are not a material planning consideration, based on the above the Council is satisfied that if developed it will not have a negative impact on the area.

**Customer Name:** Mr Christopher Punch

**Summary of representation:**

The principle that the green belt boundary should not be built on will be breached, so on that basis the representation is not for or against the proposal. However, if development on the green belt is inevitable, the representation agrees with the reasons given by the LDF Working Group as to why substitution should occur.

A dispersed strategy is not a sustainable pattern of development compared with a single site.

There is no local or national landscape designation on the proposed site in contrast with some of the other potential development sites.

A sensible road transport plan to support development at the proposed site is easily achievable, widening the A320 between Woking town centre and the M25, and there is an existing cycle connection to Woking. Provision of usable and frequent public transport would be very simple and should be cost-effective.

There are a number of potential large employers in that area and a presumption of staff accommodation

The proposed site has enough space to accommodate modern infrastructure such as schools, medical facilities, convenience stores, etc on site to minimise vehicle use, unlike other sites under consideration.

The site can easily be screened or landscaped to be almost invisible to existing neighbourhoods to the south and southeast – this does not apply to the other potential sites.

Both Woking and West Byfleet mainline stations could be accessed by public transport, cycle and on foot (W Byfleet only). The proposed site does not suffer from being south of the railway line.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a

single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The site could be screened or landscaped to make it less visually intrusive, however, this would be true of the other six sites. The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine valuable landscape features. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

**Contributor Reference:** 02597/1/001  
**Customer Name:** Ms Bryony Davis

**Summary of representation:**

Concerned about any development that impinges on Greenbelt land and is close to the SSI of Horsell Common.

The A320 and surrounding roads are already overly busy and the impact of an increase in traffic.

Infrastructure in terms of schools, GP provision etc and infilling between Ottershaw and Woking.

**Officer Response:**

Objection to the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

**Contributor Reference:** 02601/1/001  
**Customer Name:** Ms Cathy Jarvis

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt. Strongly objects to any development on Greenbelt as it has detrimental environmental effects as well as on living standards wherever it occurs.

However, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for

safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02616/1/001  
**Customer Name:** Muireann Snow

**Summary of representation:**

Does not agree to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

Green belt – loss of green belt.

Urban sprawl and Fair Oaks development plans.

Flood risks – due to more covered area and loss of trees.

Transport – roads – pressure on existing roads, especially A320.

Transport – public – lack of public transport.

Infrastructure – huge stress on existing services and with no plan to build more schools and hospitals in the area.

Wildlife – loss of habitat.

Woodlands – loss of trees and woodland.

Flight path – development is in the flight path.

Martyrs Lane recycling centre – located right in the middle of the proposed development.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02621/1/001  
**Customer Name:** Ms Catherine Rendall

**Summary of representation:**

Objects to building on green belt land either side of Upshot Lane, Pyrford.

Detrimental to the environment – many trees will be felled and hedgerows lost to make way for "affordable" properties that only the wealthy will be able to purchase.

Pyrford's roads and amenities are already overstretched

Appreciate we need more housing, but the impact and appearance of the proposed redevelopment of West Byfleet

Surrey wildlife needs to be taken into consideration

**Officer Response:**

Objection to building on green belt land either side of Upshot Lane, Pyrford is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);

- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site, including the proposals at West Byfleet.

**Contributor Reference:** 02977/1/001

**Customer Name:** Sue Goddard

**Summary of representation:**

Woodham Lane currently forms a definite boundary to the northern limit of Woking and the land north of here should remain Green Belt.

**Officer Response:**

Objection to the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst Woodham Lane forms a defensible Green Belt boundary, if the Council were to safeguard this site for future development needs, then a new robust defensible boundary would be drawn along Martyrs Lane, the Bourne Stream to the north and the Woking Borough boundary to the east, this is set out in the consultation paper. This matter has been considered within the Landscape and Green Belt Assessment carried out by Hankinson Duckett which is available on the Council's website.

**Contributor Reference:** 02626/1/001  
**Customer Name:** Mrs Marion Malcher

**Summary of representation:**

This process is based on economic growth, however this is minor when compared with the need for water, food and clean air to breathe.

Humanity faces many threats such as climate change, population growth, water stress, air pollution, species extinction and habitat loss.

Woking Borough Council policies such as CS7 protects biodiversity, the vision for Woking 2050 to create a sustainable community by maintaining a high quality environment, where resources are used wisely and biodiversity is conserved.

The Council economic development strategy outlines a modern yet quality environment, facilitating significant population and economic growth. The borough is advertised as nestled alongside a pleasant Green Belt environment.

This Green Belt is what is being proposed to be built over.

It is impossible to have constant economic growth, building more houses and at the same time protecting our Green Belt, quality of life and environment.

The Natural Woking strategy states, that human survival depends on biodiversity. The Council economic growth contradicts the environmental issues.

Strongly objects to building on any Green Belt sites and open spaces in Woking.

Objects to the Site allocation DPD process, as it does not protect the environment.

No recognition has been given to the rights of nature.

Green Belt should not be safeguarded for development due to loss of habitats, loss of biodiversity, loss of agricultural land and loss of heritage.

The representation proposes that all agricultural land be protected and include provision for allotments. Creation of a brownfield register, only social and affordable housing to be built, no building on flood plains, Green Belt to be protected and improved, under utilised Green belt land should be used as forest, a community orchard in West Byfleet, to include proposal to improve and protect wildlife, flora, heathland and habitats. The designation of SANG to be protected.

Objects to the lack of consultations of The Green Belt Review.

Objects to the process in which Regulation 18 was conducted. It remains unclear if all responses were published, there is no audit trail and the representations were dismissed with 'no further modification is proposed as a result of this representations'.

The representation proposes that all documents to be dated, name of author, version number and contact details.

Objects to the question ask at the consultation, as there are more than one option to the question, also no sites have been safeguarded, they have only been proposed. Objects to all sites being safeguarded.

The representation has included photos of the sites.

#### **Officer Response:**

Objection to the proposal and all of the other six sites is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The Council is aware of the threats humanity faces. The Core Strategy and the Development Management Policies DPD contains robust policies, to ensure sustainability and well being for the community. Particular reference is made to CS12 – Affordable housing, CS13 – Older people and vulnerable groups, CS17 – Open space, green infrastructure, sport and recreation, CS19 – Social and community infrastructure, CS21 – Design, CS25 – Presumption in favour of sustainable development of the Core Strategy and DM1: Green Infrastructure Opportunities, DM2: Trees and Landscaping, DM3: Facilities for Outdoor Sport and Outdoor Recreation, DM5: Environmental Pollution, DM6: Air and Water Quality, DM7: Noise and Light Pollution, DM8: Land Contamination and Hazards, DM21: Education Facilities and DM22: Communications Infrastructure of the Development Management Policies DPD.

Whilst the Council notes that the Green Belt provides residents with a number of benefits, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The environmental implications of the proposals will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The Martyrs Lane site is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The Council economic development strategy and environmental strategy are not at odds with each other. Sustainable development is a holistic approach, the balancing of all three elements are important to ensure sustainable development, these are environmental, social and economical issues.

The Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has

significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

The Council acknowledges the proposed modifications to the site allocations DPD. Loss of habitat and biodiversity, flora and wildlife have been addressed above.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

As set out in the Town and County Planning (Brownfield Register) Regulation 2017, the Local Planning Authority has until the 31.12.2017 to publish its Brownfield Register. The Council is committed to preparing its register in accordance with the regulations.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding.

Many of the Green Belt sites have multiple owners and the Council cannot dictate what each site shall be used for.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Policy CS8: Thames Basin Heaths Special Protection Areas (SPA) of the Core Strategy accords priority to the protection of the Thames Basin Heaths SPA. The Council has identified sufficient SANG capacity through existing SANG sites and proposed allocations in the Draft Site Allocations DPD to enable the delivery of the Core Strategy and beyond. The Council will engage with Natural England to agree the nature and size of the SANG that will be needed to serve this development if it is allocated. The Council will initiate the discussion at the appropriate time.

The Green Belt boundary review report is a technical consultants report prepared to inform the Council's Site Allocations Development Plan Document (DPD). The brief for the Green Belt boundary review is available on the Council website. It is not subject to any form of public consultation as it is an evidence base document. It does not set development policies or guidelines and therefore is not required to be consulted on as per the Town and Country Planning (Local Planning) (England) Regulations 2012.

It is important to note that the Green Belt boundary review report does not allocate any land for development. It makes recommendations to the Council about land that could be taken out from the Green Belt to meet development needs, which the Council will consider in due course as part of the Site Allocations DPD process.

It should be noted that the Regulation 18 version of the Site Allocations DPD is based on a wide range of evidence base documents and not entirely on the Green Belt boundary review prepared by Peter Brett Associates. The Council has used a number of evidence base documents to inform the Site Allocations DPD. Since the publication of the draft Site Allocations DPD, the Council has also published a number of other evidence base documents including additional transport and landscape studies. Further details can be found on the Council's website as well as within the Land to the east of Martyrs Lane Consultation Document.

All the representations of Regulation 18 are on the Council Website. All were considered and presented to the Council. The Council will publish the 'Publication' version of the DPD for a Regulation 19 consultation to give the public a further opportunity to comment on the document before it is submitted to the Secretary of State for Examination. Everyone will have the opportunity to be heard at the examination if they felt that their concerns have not been satisfactorily addressed by the Council at the Regulations 18 and 19 consultation stages.

The Council acknowledges the proposed audit amendments to the site allocations process and the Council website in general. Planning Policy will review its method of communication to ensure documents are easy to find, are dated, with contact details and will take your comments into consideration. However, Council documents will not have individual author names. Planning Policy will bring this matter to the attention of the wider Council for its considerations.

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for

safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79–95 Lovelace Drive, Teggs Lane, Pyrford

GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

**Contributor Reference:** 03019/1/001  
**Customer Name:** Mr Tim Harrold – CPRE

**Summary of representation:**

There is a clear need for the two neighbouring councils of Guildford and Woking to demonstrate a duty to cooperate in the preparation of their separate plans.

We can well understand the difficulties associated with preparing plans for the longer term future of the two separate boroughs at this time. We wish, however, to emphasise CPRE's continued commitment to the protection and maintenance of the Green Belt as a proven policy which is of enormous public benefit to the community at large in Surrey in checking the spread of unrestricted urban sprawl, the prevention of neighbouring towns such as Guildford and Woking merging into one another, and protecting the openness of the countryside from encroachment.

We are also very conscious of the purpose played by the Green Belt in assisting urban regeneration by encouraging the recycling of derelict and other urban land. CPRE has made clear to the Government its view that the development of urban brownfield sites should have priority before any further incursion into the Green Belt is considered.

CPRE argues that the further loss of Green Belt land at Woking is not valid as we maintain that there are sufficient brownfield sites in the Borough to meet the needs for future housing development without using any more Green Belt land at all. We are aware of correspondence with Councillor John Kingsbury on this topic which proposes for consideration a dozen brownfield sites that could be reviewed for further housing development including industrial sites such as at Poole Road and Day Aggregates.

CPRE believes that the permanence of the boundaries of Green Belt land is a fundamental principle of national planning policy. The Government has consistently stressed the importance it attaches to protecting the Green Belt and maintaining its aim of preventing urban sprawl by keeping land permanently open. The essential characteristics of Green Belt are emphasised repeatedly as their openness and permanence. New Green Belt boundaries should only be established in exceptional circumstances at the time of a local plan review. In our opinion the term "exceptional circumstances" is clearly much more stringent and robust in policy terms than "very special circumstances", and is therefore by definition a unique, rare, unusual and one-off event.

There has also been an emphasis on the high priority that should be given to local decision-making which is reflected in the encouragement given to Neighbourhood Planning where most Local Parish Councils in Guildford and Residents Associations in Woking seek to ensure that Green Belt remains untouched by encroachment. National policy has reiterated its determination to give priority to brownfield development and higher density urban housing which is designed for affordable pricing.

CPRE is concerned about the definition of "safeguarded land" . Objection to the loss of Green Belt land as "safeguarded" for possible future use for house building has for example been a prominent element of concern for Worplesdon Parish Council in Guildford. We maintain that the "exceptional circumstances" which were allocated for the McLaren expansion to use Green Belt land no longer apply and therefore cannot be carried forward now. The justification of Green Belt loss for "exceptional circumstances" is no longer valid.

NPPF makes it apparent that Government policy attaches great importance to the Green Belt designation, and subsequent clarification has made it even clearer that housing shortage is not to be considered as an "exceptional circumstance". This is especially true in Surrey where pressure to build on Green Belt land is a constant threat to the openness of the rural countryside because of its proximity to London.

CPRE believes that each individual Green Belt site proposed for development in Woking should be reassessed and evaluated afresh as to whether "exceptional circumstances" really apply for their consideration for housing use. We have been particularly concerned to note the way in which work has been progressing for Hoe Valley School on the Egley Road to which CPRE Guildford objected. We are concerned not only at the loss of Green Belt but also the problems of sustainability that we can anticipate as a result of this development.

#### **Officer Response:**

The Council is of the opinion that the case for releasing Green Belt land, including exceptional circumstances and safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper, with particular reference to section 1 and 2.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. Please refer to the 'Duty to cooperate bodies topic paper' for the Council response.

The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine

its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's

ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The Council has comprehensively assessed brownfield sites as part of the evidence to inform the Site Allocations DPD. The Council has published detailed information on previously developed land (brownfield land) that is suitable, available and achievable for housing and employment purposes. This is contained in the Strategic Housing Land Availability Assessment (SHLAA) (2015), the Employment Land Review (2009) and Employment Topic Paper (2015). The documents are on the Council's website at [www.woking.gov.uk](http://www.woking.gov.uk). The Council has also carried out and published a Sustainability Appraisal Report that assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives, including environmental, social and economic objectives. The available evidence on previously developed land is sufficiently comprehensive and robust enough to enable informed decisions about the preferred sites being proposed for allocation in the DPD. The evidence also demonstrates that the preferred sites are the most sustainable when compared against other alternative sites. It is important to highlight that there is no presumption that land which is previously developed is necessarily suitable for residential development. Officers will consider any other sites that will be suggested for consideration in response to the Regulations 18 and 19 consultations on the DPD.

The industrial sites at Poole Road site UA17 and Day Aggregates site UA41 have both been allocated in the draft Site Allocations DPD. Site UA17 for mixed use development to comprise of offices, warehousing and a new energy station. Site UA41 has been allocated for residential, including affordable housing.

In terms of high density development and affordable housing, as set out in the draft Site Allocations DPD sites have been allocated within the Town Centre which are high density and have affordable housing this is to support the aims and objectives of the Core Strategy policies CS1 and CS2.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Paragraph 85 of the NPPF explains that safeguarded land is 'not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development;'. The land is safeguarded for future development needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Officer's would agree that the determination of a planning application is a distinct planning process which is different from the Site Allocations DPD process.

Whilst Hoe Valley school is outside the scope of this consultation, the merits of the proposal and the case put forward by the applicant to demonstrate 'very special circumstances', was dealt with at the Planning application stage.

**Contributor Reference:** 03021/1/001  
**Customer Name:** Pырford Neighbourhood Forum

**Summary of representation:**

LDA Design consultant write on behalf of the Pырford Neighbourhood Forum (PNF) in relation to the above consultation.

PNF has submitted evidence to WBC previously making strong objections to the inclusion of the Pырford sites as safeguarded land.

A technical report commissioned by PNF from LDA Design Consulting Ltd. The report undertakes a comparison exercise of the land east of Martyrs Lane site and the two Pырford sites.

The consent for the McLaren (LPA ref.11/0823) has established the principle that development is acceptable east of Martyrs Lane site and the site can accommodate substantial development without significant harm.

The safeguarding of the land east of Martyrs Lane site would remove the need for all six of the other potential sites safeguarded, including the two sites at Pырford. WBC evidence indicates the capacity of the land east of Martyrs Lane site (excluding the golf course) is at least 1024 new dwellings

The evidence indicates sympathetic development of the land east of Martyrs Lane (excluding the NZ Golf Course) would permit the key characteristics of the site to be retained especially as there is a current substantial amount of boundary vegetation screening.

The land east of Martyrs Lane site is in poor condition. Whilst the New Zealand Golf course in the south of the site is in operation, both the Woodham Sports Club pitches and courts and tree nurseries are no longer active and now in a state of disrepair. There are no public rights of way within the land and it provides no contribution to public recreational amenity.

The sites at Pырford are well managed, in active agricultural use and nearby footpaths provide much utilised recreational facilities for many Borough residents who relish the natural environment which WBC now endorses in the Natural Woking Strategy.

In 2015 the last SHLAA was published. At the time 2 sites in Martyrs Lane were offered but ignored and given that McLaren planning permission had been revoked the Martyrs Lane site should have been reintroduced to the Site Allocations Development Plan Document before the Regulation 18 Consultation in June 2015..

The need for permanent and defensible boundaries for any site allocation and amend Green Belt boundary. The strong physical features on the ground at the land east of Martyrs Lane

site, including the mature vegetative network and The Bourne stream, would allow a number of options for a permanent and defensible Green Belt boundary to be drawn.

WBC consultants seem to be at variance with each other and there seems to be a massive increase in the importance of Martyrs Lane to the Green Belt over the last 2 years. PNF would like to highlight that the majority of the land north of NZGC was found appropriate for a 60,000 sq. m factory. This does seem consistent with the view that the site is of critical importance to the Green Belt.

Site Capacity, referring to 3.4.1 of the HDA report we note that there is the potential for 900 dwellings on Parcel A. However, Parcel A does not include the SCC site of approximately 8.5 hectares offered in the SHLAA process which we estimate is sufficient for housing required to meet the original requirement of 1024 dwellings on safeguarded development land for the 2027–2040 time frame.

The Technical Report is summarised below.

LDA Design was appointed by PNF to respond to the consultation. The report examines the existing evidence base of the site allocations DPD for Martyrs Lane (Parcel 2) and Pyrford Fields (Parcel 9a and 9b) such as the five purposes of the Green Belt, Woking Green Belt review, The Green Belt Assessment, Environmental constraints (flood risk, biodiversity), Strategic Accessibility, local communities, landscape character and sensitivity to change, and Sustainability Assessment.

The report goes through WBC evidence from the Peter Brett Associates Report and the different stages to assess Green Belt Land for Parcel 9 and Parcel 2.

The assessment concludes Parcel 9 has "Very Low suitability as an area of search", with the land "Fundamental to the Green Belt".

In comparison, Parcel 2 (Martyrs Lane) was judged to be of Major importance for all 3 Green Belt purposes. The assessment concludes that Parcel 2 has "Low suitability as an area search", with recommendation to "Retain the Land in the Green Belt" for Parcel 2.

Parcel 2 is specifically noted in Paragraph 3.5.5 as an area with low suitability for removal from the Green Belt and consequently should be considered. By comparison Parcel 9 is considered to have very low suitability.

The Sustainability assessment looked at environmental constraints.

Parcel 2 – Minor constraints– In this parcel, there are several minor constraints to the north, including a very small area considered to be in Flood Zone 2, some Grade 3 Agricultural land and Safeguarded Mineral Resources (SMR). About a quarter of the site has also been assessed for potential contamination, and a large area is considered to be a Biodiversity Opportunity Area (BOA). South–west of Martyrs Lane is a Site of Nature Conservation Importance (SNCI).

These constraints not considered to be major and could be accommodate in development with design or mitigation.

Parcel 9 – Major constraints – About half of this parcel is classified as grade 3 agricultural land, with some Grade 2, but the part adjacent the urban area is classified as Urban. The eastern part is safeguarded as a potential mineral resource, and the topography is fairly steep. A large proportion of this parcel is identified as an 'Escarpment and rising ground of Landscape importance. Due to the prominence of the escarpment in the landscape, it is likely that only the western half of the parcel is developable.

Accessibility to Woking Town Centre – The parcels which scored most highly in terms of strategic accessibility were located in several clusters around the edge of the urban area, such as Parcel 2.

Community facilities – proximity to local centres, schools, health centre, community centre and barriers.

Overall, Parcel 2 was ranked 2 and parcel 9 was ranked 18 in terms of sustainability.

Capacity for Change (Based on Landscape Character & Sensitivity) Parcel 2 is low and Parcel 9 is little/none low.

Whilst the Green Belt Review identifies that Parcel 9 is unsuitable in terms of a Green Belt Assessment and Landscape Character assessment, it suggests that the north-western part of the site is less sensitive due to its landform.

It proposes that 'sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road' and that it would be feasible for a small area of development in the narrow field between the field and Tegg's Lane to the north. The Green Belt Review recognises that consideration would need to be given to the setting of the Registered Park and Garden at Pyrford Court on the other side of Pyrford Common Road, and the existing boundary tree belt, but it well located in proximity to local community facilities. .

Parcel 2 was not reintroduced to the assessment, despite it originally being considered overall more suitable for Green Belt release than Parcel 9.

LDA Design reviewed the Green Belt Methodology and found 'availability' as an overriding determinant as to whether a parcel of land should be released is problematic. The Green Belt Review should rank the land parcels according to their Green Belt purposes and sustainability credentials.

Baseline studies such as landscape character assessment and Conservation area appraisal were missing.

It was considered that too much weight has been placed on site 'availability' as a key indicator of deliverability for allocating sites for Green Belt release beyond the plan period. There is a lack of consideration as to the consequences on the overall shape and functioning of the Green Belt to inform decision makers.

The Green Belt Review only considered development parcels in isolation without referring back to an overarching set of sustainability or growth objectives.

The weight given to land use and availability are unlikely to deliver sustainable development.

The weighting applied to the various strands of the assessment process (Green Belt purposes, sustainability criteria and landscape capacity) – is not transparent. This makes it difficult to draw comparisons between different parcels.

There are inconsistencies in the way parcels have been assessed. Some have been given 'split' score in relation to landscape capacity, while others have benefited from a more detailed analysis of particular area or sites within the parcel.

LDA Design ranks Parcel 9 as the least suitable land area when compared to all of the other parcels. The Green Belt Review indicates that Parcel 9 has 'low-medium' sustainability performance; 'little/no' and 'low' capacity for change; 'major' environmental constraints; and fulfilling two 'critical' Green Belt purposes.

LDA Design review of Parcel 2 has generally low potential for Green Belt Release due to existing land uses and landscape character constraints, although the area of land adjacent to the McLaren site warrants further investigation.

LDA Design ranked parcel 2 as 7 and parcel 9 as 14 in terms of sustainability.

LDA Design considers in this report that the judgements and assessment relating to the Green Belt functions, sustainability, environmental constraints and landscape capacity of Parcel 9 are broadly correct. While LDA Design recognised that Parcel 9 has some local variations in character, it is predominately rural in character and contributes to the setting of the urban and the historic environment.

Overall, the report concluded that the development of all or part of Sites 9a and 9b will inevitably change the character of the land itself and its immediate surroundings, and will result in harm to landscape character and views and alter the countryside context of the Registered Park and Garden, Avery Road Conservation Area and Pyrford Village. This Parcel is identifiable as countryside which is of inherent value even though it has no blanket formal statutory protective designation. The development of Site 9b in particular would be contrary to planning policy guidance, which seeks to protect the character of the escarpment.

The field margins and woodland belts have potential to provide valuable habitat for dormice, bats, badgers and invertebrates. There are also two water bodies within 250 m of the Sites which may have potential to support great crested newts.

In relation to heritage, Sites 9a and 9b adjoin two Conservation Areas (Pyrford Village and Aviary Road); Pyrford Court Registered Park and Garden; a number of Listed Buildings; and an Area of High Archaeological Potential.

The surrounding fields were once farmed by the residents of Pyrford.

It is considered that any development proposals will need to include sufficient land for access; offset from surrounding trees, allowing for root protection and creating habitat corridors, space for surface water drainage; and public open space.

The site could accommodate less than 223 dwellings.

The LDA examines the Hankinson Duckett Associates Report which looked at Martyrs Lane only.

HDA's assessment states that the Martyrs Lane site's characteristics are similar to the wider landscape as defined in the local character assessment, but the relationship between the site and its surrounding landscape is low due to the site's high containment.

HDA concludes that Martyrs Lane parcels are critically important in their contribution towards 2 purposes of the Green Belt, which is an increase on the Major importance deduced in the Green Belt Review.

However, in regards to capacity for potential development, the HDA report concurs with the Green Belt Review in that Parcel 2 has a 'low capacity'. However, HDA states that whilst the southern extent of Parcel 2 presently has an overall low capacity for change, the area to the north has the potential to accommodate development on the former sports pitches and tree nurseries, and a precedent has been set by McLaren's (revoked) outline planning permission.

Overall, HDA conclude the whole Martyrs Lane site is of critical importance to the purpose of the Green Belt, with critical importance contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The site is also of critical importance to the landscape character of the wider area. A significant change to the character of the site, as well as substantial vegetation losses would need to occur in order to accommodate the dwelling numbers currently envisaged to meet Woking's assessed housing need.

Discuss WBC Planning Committee report in relation to an Outline Planning Application for the McLaren Group Ltd for a New Applied Technology Centre in regards to the five purposes of the Green Belt. The Committee Report concludes with the recommendation the Local Planning Authority is minded to grant planning permission subject to conditions and S.106 agreement. As the application involved development within the Green Belt the application was referred to

the Secretary of State who subsequently confirmed that there as no need for the application to be reviewed by an Inspector, and that the application could be determined locally.

LDA Design looks at harm to the Green Belt, sustainability, suitability, landscape character and sensitivity to change which it has discussed previously in the report.

The Hankinson Duckett Associates report and Peter Brett report was compared in regards to landscape, harm to the Green belt, sustainability, environment, suitability, sensitivity to change and compared parcel 2 and parcel 9.

In terms of incursion into the Green Belt, while the HDA suggests that development would make a significant incursion into the Green Belt, it also concludes that it could be possible to accommodate proposed housing without significant effect on valued landscape features if development was contained within the centre of Parcel and the perimeter of existing features on the site was used to screen proposed development. This assertion supports the HDA conclusion that it would be possible install new clear, strong and durable boundary to the site.

Although the Green Belt Review provides a caveat to the Sustainability Assessment results, it is clear from the findings that Parcel 2, on balance, is more suitable for development than Parcel 9.

Though Parcel 2 was excluded from this Stage of the Green Belt Review, an area of Parcel 9 was reintroduced as suitable for consideration despite being ruled out during the Green Belt and Sustainability Assessments as it fulfilled two ' Critical' Green Belt purposes, with poor sustainability and high landscape sensitivity. PBA concluded an area to the north-west of Parcel 9 offered a reasonable opportunity to develop a small area of potential housing that overruled the constraints set out above.

while Parcel 9 could provide a small area of development, there are a number of alternative location more suitable locations that were ranked higher in the PBA Green Belt and Sustainable Assessment that should have been considered first, this includes Parcel 2.

Although Parcel 2 has some association with the wider landscape, it is generally disconnected from the prevailing rural landscape that surrounds it. As such, HDA propose that provided all necessary and appropriate mitigation measures were undertaken, there would be scope to develop areas of Parcel 2.

From analysis of the existing evidence base, including the WBC's own evidence base key themes are apparent:

Land east of Martyrs Lane (Parcel 2) is more appropriate as an area of search for release from the Green Belt than the Pyrford sites (Parcel 9).

Parcel 2 has less environmental constraints, is more sustainable, more suitable and less sensitive in landscape character and visual terms than Parcel 9. It also has greater capacity to accommodate change.

The report includes a comparative table between PBA report, HDA report and their LDA design reports.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal. It is stressed that the planning consent for the McLaren proposal does not establish the principle of residential use of the site. The McLaren proposal is for a technology centre justified by special circumstances on the individual merits of the schemes, which is an entirely different use to the one being proposed by the Council. To suggest that the principle of development has been already established is wrong in this regard. Any comparison of the safeguarding options should be based on the use for which the land is to be safeguarded, which is residential and any supporting infrastructure that might be necessary.

The fundamental aim of Green Belt is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belt are their openness and their permanence. It is clear from this context that the Green Belt is not about the quality of the land. Whilst the quality of the land may be taken into account, it does not override the fundamental aim of the Green Belt.

Paragraph 6 of the NPPF defines the purpose of the planning system. It is to contribute to the achievement of sustainable development, and the policies in paragraphs 18 – 219 of the NPPF taken as a whole constitutes the Government's view of what sustainable development in England means in practice for the planning system. It is within these broad principles that the Council's decision on the preferred approach to safeguarding would be made.

The consultation document is clear to emphasise that if the Martyrs Lane site is to be safeguarded, it should be capable of enabling the delivery of at least 1,200 net additional dwellings. It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. On grounds site capacity, there is not much between the two

options. Also, a number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council's consultation document clearly defines by a Map the area being proposed for safeguarding. This includes the New Zealand Golf Course. The consultation document does not specify which parts of the land will be developed for what purpose. The attempt by the representation to exclude New Zealand Golf Course is misleading and presumptuous at this stage. Consideration of the representations received will help inform the Council of how the site could be developed if it is safeguarded and whether or not the New Zealand Golf Course should be developed. The New Zealand Golf Club has made representation as part of the consultation and has confirmed that the Golf Course will not be available for development. This has implications for the deliverability of the land and as such it is a material consideration that the Council will take into account recognising that the overall aim of the Council will be to help achieve sustainable development.

It should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. As highlighted above, New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land (without the New Zealand Gold Course) will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites including the Pyrford sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic

Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. The Council fully appreciates the importance of the Green Belt and its multiple uses to the local community. However, the Council also has a responsibility to plan to meet the housing needs of the community. The balance between these conflicting objectives has been comprehensively discussed at the Core Strategy Examination in establishing the principle for releasing Green Belt land to meet future housing need. Whilst it would be wrong for the Council to put a value on the importance of the Green Belt to the local community, the overall total of Green Belt land proposed to be released from the Green Belt (excluding Martyrs Lane) to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. Even that, the Council has been concerned to make sure that any land it releases from the Green Belt does not undermine its overall purpose and integrity, and it has carried out a significant body of evidence to help achieve this objective. The representations received during the consultation will also significantly assist.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally ignored. They were carefully considered and rejected.

The Green Belt boundary review report provides sufficient evidence that the release of the proposed allocated sites from the Green Belt will enable a defensible boundary to be drawn that will endure over a long period of time beyond the Core Strategy period. Where the recommendations of the Green Belt boundary review report regarding where the defensible boundary could be drawn had not been accepted by the Council, a clear reason has been given.

The proposed Green Belt boundary has been drawn to follow the edge of the development sites in Mayford. For sites GB8, GB9, GB10 and GB14 there will be a continuation of the existing urban area which is well defined by Saunders Lane to the south and Egley Road to the east. The

Green Belt boundary to the west has been defined by site GB11 which is adjacent to the Hook Heath escarpment. This will protect the purpose of the Green Belt and not undermine the integrity of the escarpment. Site GB12 has a strong defensible boundary of Lovelace Drive, Teggs Lane and Upshot Lane. GB13 boundaries are Upshot Lane, a public footpath and Church Hill. Site GB7 will continue to remain within the Green Belt and therefore the Green Belt boundary will not change in this particular location. In this regard, there are no perceived relative advantages over each other.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. The conclusions of the report are broadly similar to the Green Belt boundary review report by Peter Brett Associates. As mentioned before the reference to the development management Officer's report is unreasonable and misleading as that process differs to the site allocation process.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt. It should be noted that the prevention of urban sprawl is a fundamental aim of the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with

regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the

site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The environmental implications of development, regardless of whether it is in Pyrford or elsewhere, will be fully assessed as part of the development management process, and appropriately mitigated. The impact of development on the escarpment can be reduced by reducing the amount of residential development and increasing the proportion of open space allocated for GB13, as set out in the sustainability appraisal.

Regarding accessibility to services and facilities, it is correct that GB12 and GB13 are not within reasonable walking distance of Woking town centre or an existing secondary school. Nevertheless they are within a reasonable walking and cycling distance of Pyrford Neighbourhood Centre which meets the day to day needs of local residents. They also benefit from a limited public transport service. The Council recognises that regardless of what sites are safeguarded for future development needs, it will be necessary to work with bus service providers to improve service provision and frequency.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If

any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The points raised about the Green Belt Methodology, sufficient land for access and the site can accommodate less than 223 dwellings have been previously addressed in the Reg 18 consultation, (refer to the Council response under Mr Kratt).

The findings in the LDA Design report are noted. The overall purpose of the Site Allocations DPD is to deliver the requirements of the Woking Core Strategy. The Council is satisfied that the depth and breadth of evidence used to support the Core Strategy and the Site Allocations DPD are sufficiently comprehensive, robust and was able to withstand scrutiny at the Core Strategy Examination and similarly will be defensible at the Site Allocations DPD Examination.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the

Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Contributor Reference:** 02571/1/001

**Customer Name:** D Emery

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part of the site is previously developed land and semi-derelict.

The northern site is publicly owned land so the sale would help council tax payers

It is close to major employers and used for non-agricultural purposes

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

Fewer residents will be disrupted by one site than by six individual sites.

Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02570/1/001

**Customer Name:** A Emery

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part of the site is previously developed land and semi-derelict.

The northern site is publicly owned land so the sale would help council tax payers

It is close to major employers and used for non-agricultural purposes

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

Fewer residents will be disrupted by one site than by six individual sites.

Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mrs M E O'Keeffe

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.  
Support the Martyrs Lane proposal excluding the New Zealand Golf Course.  
Planning permission was recently granted for the top part of the site.  
The top part of the site is previously developed land and semi-derelict.  
The northern site is publicly owned land so the sale would help council tax payers  
It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site then by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site then by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

This is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, in favour of substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

Martyrs Lane site is more suited based on the Brett Woking Green Belt report which states Pyrford has Very Low Suitability for removal from the green belt rather than Low for ML. The same report also states that the Environmental constraint would be greater in Pyrford than at ML as well as the fact that the impact on the rural character of Pyrford would be greatly affected which is not the case at ML.

Whilst Goldsworth Park is bigger than what is being proposed here, it clearly demonstrates that if you build from scratch large housing developments then you can provide the services needed to make it work for the residents, as opposed to the proposed bolt on sites which will only put huge pressure on already stretched services, such as doctors surgeries, schools and traffic management.

It has been mentioned that 3500 are needed, but I am not sure where that figure comes from as the 6 sites only totals 1024 so this consultation should only be relevant to that number which fits into the area north of NZ Golf Course.

## Officer Response:

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation

is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low

suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

**Summary of representation:**

Objects to the proposal of including land at the East of Martyrs Lane for housing in the future.

Some of the proposed area is Green Belt land and therefore should be protected as such.

With the development of the Fairoaks site, there would be no green space remaining to prevent urban sprawl.

The site is within a significant flood plain, and therefore development should be avoided to prevent unnecessary flooding in the future.

With the large developments at Fairoaks and Sheerwater, the pressure on already busy existing roads will be great such as the A320, Six Crossroads Roundabout, Sheerwater Road and Woodham Lane.

There is very little public transport serving the area.

Existing services such as schools, doctors surgeries and hospitals which are already under strain will be adversely affected.

There will be a loss of habitat for wildlife, including foxes, deer, badgers, grass snakes, shrews and voles.

There will be a loss of trees and woodland, affecting bats, owls, birds of prey and other protected birds.

The area for development is within flight paths.

Martyrs Lane recycling centre would be in the middle of the proposed development and unacceptable due to social and environmental issues as well as traffic issues along Martyrs Lane, Woodham Lane and the A320.

The land is not geologically sound to support a housing development.

On the basis of these objections, several other smaller sites should be identified for future development , rather than this one that can not be adequately supported on multiple levels.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Customer Name:** Sorcha Dando

**Summary of representation:**

Does not agree to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

Green belt – loss of green belt.

Urban sprawl and Fair Oaks development plans.

Flood risks – due to more covered area and loss of trees.

Transport – roads – pressure on existing roads, especially A320.

Transport – public – lack of public transport.

Infrastructure – huge stress on existing services and with no plan to build more schools and hospitals in the area.

Wildlife – loss of habitat.

Woodlands – loss of trees and woodland.

Flight path – development is in the flight path.

Martyrs Lane recycling centre – located right in the middle of the proposed development.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Summary of representation:**

Some benefits associated with the Martyrs Lane Proposal. However, concerned about all the different planning proposals in the Woking area and the crucial requirement for infrastructure not being addressed.

There are existing problems with roads, schools and medical facilities. All the proposals will be having such problems.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Mr And Mrs Alec And Catherine Beattie

**Summary of representation:**

Against the possible development of the two Pyrford fields and in favour of the development north of Martyrs Lane.

Pyrford's Green Belt is a unique semi rural setting, largely unspoilt with open views south with the two threatened fields forming a key part of the escarpment. These two fields have been farmed for centuries and the area highlighted in the Pyrford Neighbourhood Plan.

Green Belt land in Pyrford is very accessible and actively used by walkers, runners, cyclists and others from all across the Borough. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public despite it's Green Belt status.

The Pyrford Green Belt is an irreplaceable asset with several conservation areas.

The Martyrs Lane site is partly developed and derelict. There is no landscape element, no known footpaths and is unused by the public.

In 2012 planning permission was granted to McLarens for the northern part of the site. The work done to demonstrate its viability as a factory stands, so the building of houses is equally viable.

The Brett Green Belt report classified the two fields in Pyrford as having little or no capacity for change and very low suitability for being removed from the Green Belt: the Martyrs Lane site has no landscape designations, has been partially developed in the past and is classified as having low suitability for being removed from the Green Belt. The Martyrs Lane development should be selected on these criteria alone.

With its easy access to the A320 and M25, the Martyrs Lane development has better major road links than Pyrford with its B and C roads, so fewer residents would be impacted by travel disruptions.

Housing in Pyrford is expensive and more executive type homes would not provide key worker homes for employers like McLarens and St Peter's Hospital, which are nearer to the Martyrs Lane development.

Pyrford CofE Primary School is already full and has taken many pupils from the Maybury area. The Martyrs Lane site would be an ideal opportunity to build a new school and more affordable housing as part of the development plan.

The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at the West Byfleet facility.

**Officer Response:**

Objection to development on the two Pyrford fields and support for the land to the east of Martyrs Lane is noted.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Contributor Reference:** 02990/1/001  
**Customer Name:** Mr And Mrs J A Clements

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs.

Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Andrew Kirby

**Summary of representation:**

The residents of the village feel very strongly that there should not be substantial growth in the size of the village due to development. The proposed developments near Teggs Lane and Upshot Lane, will destroy large areas of green belt surrounding the village. It is this green belt area that has stopped Pyrford from merging with Woking town, enabling Pyrford to maintain it's character as a small local village.

Support any adjustments to the Site Allocations that will mean that the proposed developments near Teggs Lane and Upshot Lane are no longer required. Please ensure that this representation is allocated not only to the current Consultation on the land east of Martyrs Lane but also to any other proposed changes to Site Allocations that affect the village of Pyrford.

**Officer Response:**

Objection to development on Pyrford fields and support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

Whilst the representation wishes to be considered for future consultations relating to development proposals in Pyrford, the Council is currently unable to fulfil this request as each representation must be received by the Council during the prescribed consultation period. Any representations received before or after the consultation period are not 'duly made' as per the Regulations. The Council will at the publication stage ('Regulation 19 consultation') of the Site

Allocations DPD, notify the public as well as those who are on the planning policy mailing list of the exact dates to submit any representations they may have.

**Contributor Reference:** 02535/1/001  
**Customer Name:** Mr And Mrs R N And F Sumner

**Summary of representation:**

Support for the Martyrs Lane proposal. It contains previously developed land and a single site will provide economies of scale to address infrastructure issues.

Wrote to the Council as part of the Regulation 18 consultation to object to development in Pyrford. Objects remain the same, namely that there is a lack of infrastructure to cope with significant development and that there would be damage to the natural environment. The land is also appreciated by the local community. Regulation 18 representation attached.

The Martyrs Lane site is a sensible solution to providing housing for the future and a good choice of land to build on.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The reasons against development in Pyrford as set out in the representation are noted. The Council has previously responded to this particular representation in its response to the Regulation 18 consultation. This response can be found on the Council's website.

**Customer Name:** Mr Ian M Lachowicz

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs.

Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL

contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);

- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to

manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02540/1/001  
**Customer Name:** Ms Helena Thompson

**Summary of representation:**

Support for the Martyrs Lane proposal.

Good transport links into Woking and onto the M25 towards Heathrow.

It will be a community, not just a housing estate, as there will be enough room for houses, shops, school and health centre, allowing residents to access all the essential services within their neighbourhood. It would be harder to create a sense of community in smaller separate sites compared to one large cohesive site. Potentially a larger site can include community space, green space, etc.

The inclusion of a health centre, school and shops will mitigate the impact that residents from 1,200 houses would otherwise have on Woking town centre and neighbouring areas. Residents would not need to travel far to reach these services and the existing health centres and schools would not struggle to meet the new demand.

There would be enough space for affordable housing.

Martyrs lane has no national or local landscape designation.

As all the housing would be situated in one place, there would be a mix of housing for a wide range of people.

There is a presumption that the land is suitable for development as McLaren has previously been given planning permission to build on the site.

Most of the site is not in Flood 2 and Flood 3 areas, meaning that the majority of the site is fairly safe from future flooding which is a key consideration.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it.

As most of the housing need for the borough is internally generated, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. In addition, the Council has a number of planning policies and best practice design guidance that will make sure that development will be to a high standard. By also supporting development with adequate infrastructure, this will minimise any social, environmental and infrastructure pressures in the area as a result of the development. Overall the Council is satisfied that development at any of the proposed safeguarded sites will not undermine the social fabric of the borough and specific communities within it.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six original sites. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape character of the borough and any specific landscape designations. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of

Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Core Strategy Policy CS11: Housing mix states that all residential proposals will be expected to provide a mix of dwelling types and sizes to address the nature of local housing needs. This policy would apply to development at any of the proposed sites in the Site Allocations DPD and therefore there is no particular advantage of the Martyrs Lane site in this respect.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

**Contributor Reference:** 02542/1/001  
**Customer Name:** Mr Andy Maddock

**Summary of representation:**

Keen to retain the Green Belt where possible. Main concern refers to the additional traffic on the roads that do not have the capacity.

Support for the Martyrs Lane proposal.

The roads in Pyrford are congested and not safe.

A new primary and secondary school will be needed as demand can not be met in existing schools. The other sites also face similar issues and this will need to be addressed at all locations.

The roads around Martyrs Lane are already built for traffic and this will mean less disruption. Infrastructure will only need to be provided once. Traffic to the M25 and Woking would not affect smaller routes.

Much of the Martyrs Lane site has been developed already or has had planning accepted on it so the precedent has been set. The Pyrford site is in agricultural use.

The campaign against using Martyrs Lane is full of incorrect information. The proposal is much cheaper, less disruptive and the more environmentally responsible option.

**Officer Response:**

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on infrastructure provision, namely education and transport infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In addition, the County Council is the education provider for the area and its views on education provision will be seriously considered if the site is to be allocated. If the need for additional education provision is proven at the time of the review of the Core Strategy and or the Site Allocations DPD, the Council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and or developed.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The merits of the Martyrs Lane site as set out in the representation will weigh in the balance of considerations by Members.

**Contributor Reference:** 02430/1/001  
**Customer Name:** Mr Paul Latham

**Summary of representation:**

Some of the site is previously developed which is not true of the other proposed sites.

Safeguarding one large scale will mean economies of scale to find solutions to the infrastructure concerns.

In contrast, regarding the two sites in Pyrford:

The A245 through West Byfleet and over the M25 is at capacity especially when other new development in the area is taken into account.

Pyrford Green Belt is accessible and used for recreational purposes. This is not the case for Martyrs Lane.

The Pyrford sites are surrounded by heritage assets and features and are an integral part of the heritage setting of the area.

Pyrford Green Belt is protected by Policy CS24 – Escarpments and rising ground of landscape importance.

The Pyrford fields are used for agricultural purposes and provide good quality agricultural land. They also make a major contribution to the rural character of the area.

Martyrs Lane is more suitable for development as it would have less impact on the landscape. Would prefer no further development in the area at all. Woking's roads are congested and over capacity and the existing infrastructure can not support further new residents.

It is not essential that the New Zealand Golf Course be considered for development. The northern section of the site is capable of delivering all the 1024 houses required.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response

to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from

various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation on heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst the representation notes a preference for no further development in Woking, it should be noted that the Council is fully committed to the comprehensive delivery of the Core Strategy which seeks to facilitate the delivery of 4964 dwellings over the plan period, in addition to a significant amount of retail and office development. The Site Allocations DPD is therefore an important document that will identify specific sites for development and safeguarding.

Regarding the representation on the New Zealand Golf Course, as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the

waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Contributor Reference:** 00374/2/001  
**Customer Name:** Ms Alison Kirby

**Summary of representation:**

Supportive of the proposal as it would render sites GB12 and GB13 in Pyrford unnecessary for allocation.

The residents of Pyrford village feel very strongly that there should not be substantial growth in the size of the village due to development. As a result of the 2016 referendum, Woking Borough Council are required to give due consideration to the views of the residents of Pyrford in their planning decisions.

The proposed developments near Teggs Lane and Upshot Lane, Pyrford for the building of over 400 properties will destroy large areas of green belt surrounding the village. It is this green belt area that has stopped Pyrford from simply being swallowed up by Woking town, enabling Pyrford to maintain its character as a small, local village.

**Officer Response:**

The Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land and the benefits it brings to the particular communities where the land is situated. Whilst the Council sympathises with this concern, it has ensured through a number of studies that any land that is released from the Green Belt will not undermine its overall purpose and integrity. Taking into account the constraints of the Borough and the available evidence, the proposed allocations are the most sustainable to deliver the objectives of the Core Strategy when compared against other reasonable alternatives. The Sustainability Appraisal Report provides the evidence to support this view. Whilst not underplaying the significance of the benefits of Green Belt land to individual local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.46% of the total area of the Green Belt.

The Green Belt Boundary Review assessed parcels of land against the purposes of the Green Belt, one of which is preventing neighbouring towns from merging into one another, and another purpose is to check the unrestricted sprawl or large built-up areas. The Council do not consider that the potential development of identified parcels around Pyrford would significantly reduce separation between towns or lead to unacceptable urban sprawl.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved.

Overall, the Council is satisfied that the social, environmental and economic character of Pырford will not be significantly undermined.

**Summary of representation:**

Support the proposal for 1024 dwellings at Martyrs Lane but excluding the New Zealand Golf Club land.

Particularly upset that WBC have confused the issue of the land needed for safeguarding with the issue of re-drawing the Green Belt boundary. This has led to an unnecessary upset to residents in the Woodham Lane area, who have been falsely led to believe that the land on the New Zealand Golf Course is under immediate threat.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The top part of the site was recently granted planning permission.

Much of the northern site has already been used for non-agricultural purposes and has been used for development previously. This includes disused sports facilities, debris and buildings.

Part of the northern site is publicly owned so the sale would help council tax payers.

There is currently no public access to the land.

The northern part of the site is close to major local employers.

The northern part of the site is well served with public transport unlike the other six sites.

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre.

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

Reasons against development in Pyrford include:

Pyrford has a unique semi rural setting with open views set on an escarpment. The fields are used for agricultural purposes.

The Peter Brett Woking Green Belt report stated that two fields in Parcel 9 have very low suitability for removal from the green belt, with low, or little or no, capacity for change in landscape character.

The Green Belt land in Pyrford is very accessible and used for recreational purposes.

The infrastructure in Pyrford is at capacity.

The B367 is narrow and suffers with congestion. Additional traffic will make the situation worse.

The public transport in Pyrford is limited and a major improvement will be required to reduce private vehicle road usage.

Sewerage capacity is already at maximum, with overflows occurring during heavy rains. Only a major capacity upgrade between Pyrford and the Wisley plant would enable a large new development to be practicable.

The Pyrford Primary School is at capacity and there is no intention for it to expand.

## Officer Response:

Support for the Martyrs Lane proposal and objection to development in Pyrford is noted.

To clarify on the representation regarding the proposed Green Belt boundary, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site

Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst there may be limited public access to much of the Martyrs Lane site, one of the overriding considerations is to ensure that any land removed from the Green Belt will not undermine its overall purpose and integrity.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal

of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The representation regarding outlining other reasons against development in Pyrford have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02550/1/001

**Customer Name:** Ms Ann Stone

**Summary of representation:**

Support for the Martyrs Lane proposal.

It appears misinformation has been circulated about the Martyrs Lane (ML) site as to the number of dwellings needed which needs to be corrected. Up to 1,200 homes could be provided on part of this site – as opposed to the 3,000 over the total site that has been publicised.

The ML site, whilst currently classified as Green Belt, is well contained by existing urban and natural boundaries including the A320, the existing urban area and the Bourne Stream. The A320 is also far better able to cope with traffic volumes than the B roads and country lanes at the other proposed sites.

Planning permission to develop part of the site was granted in 2012.

The top part of this site includes pre-developed land which is now semi derelict.

There is no current public access to the site, unlike the other proposed sites.

The site has no local or national landscape designations unlike the proposed Mayford or Pyrford sites.

The Green Belt boundary review describes the site as low in suitability for development whereas again Mayford and Pyrford are classed as very low in suitability.

Council personnel acknowledged in 2015 that development at the site would merely impact on the landscape. By contrast they assessed the impact at all three of the alternative sites (Byfleet, Mayford and Pyrford) as very negative.

A most important advantage of the ML site is the possibility that more affordable housing could be incorporated into the project due to the land being less costly than the other sites.

The site is in close proximity to employment

There is viable public transport unlike the other sites.

There are economies of scale from using one large site.

There will be less traffic congestion plus better safety and access during construction and when completed.

There is direct access from the A320 to Woking town centre and the M25.

Potential for superior infrastructure.

Part of the north of the site is publicly owned so the sale would benefit council tax payers

Significantly fewer residents would be affected by a single site development

It is not necessary to include the New Zealand Golf Course in the development.

**Officer Response:**

Support for the Martyrs Lane site is noted.

As set out in the Land to the east of Martyrs Lane consultation paper, the Council was consulting on the possibility of substituting the site for the sites safeguarded in the draft Site Allocations DPD to meet long term development needs. In particular, the consultation document stated that it is anticipated that the site is sufficient to enable the delivery of at least 1200 net additional homes. This is broadly similar to the cumulative yield of the six original sites.

Whilst the site benefits from a number of existing boundaries, as set out in the representation, it should be noted that the site was not recommended for removal from the Green Belt in the Green Belt boundary review. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The Landscape Assessment and Green Belt Review (2016) also noted that the site is of critical importance to the purpose of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The site is also of critical importance to the landscape character of the wider area. A Significant change to the character of the site, as well as substantial vegetation losses would need to occur in order to accommodate the dwelling numbers currently envisaged to meet Woking's assessed housing need. These factors will weigh in the balance of considerations by Members when identifying the Council's preferred safeguarding approach.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose

and integrity. It should also be noted that only some of the original six sites have public access. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the

A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Regarding the representation on infrastructure provision and economies of scale, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. However it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Customer Name:** Ms Susan Keale

**Summary of representation:**

The two fields either side of Upshot Lane are integral to the heritage setting of the area, are used for agricultural purposes and make an important contribution to the rural character of the area. They also have amenity value.

The loss of these Pyrford sites would not create a long term solution to the housing needs and will only create more problems in the future. The local infrastructure is at capacity already.

The loss of the Green Belt anywhere should not even be a consideration so with this in mind I agree to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

The site is previously developed including several disused buildings and was granted planning permission for McLaren. It has much less amenity and heritage value.

A single site would be less disruptive and be more economical.

The Sheer House proposal in West Byfleet should be used against the 1024 dwellings required and therefore the New Zealand Golf course should not be considered for development.

**Officer Response:**

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on proposed housing developments in West Byfleet, it should be noted that the Council is seeking to safeguard land for future development needs between 2027 and 2040. The proposed development within West Byfleet, as set out in the representation, will if permitted and delivered, make a contribution towards the housing requirement of the Core Strategy which is for 4964 dwellings between 2010 and 2027. It therefore can not be used to reduce the housing requirements for the next plan period.

**Contributor Reference:** 02567/1/001  
**Customer Name:** Mr Phil Coleman

### **Summary of representation:**

All of the seven sites under consideration are within the Green Belt, but favour substituting the six sites – totalling 1024 dwellings – with the land to the East of Martyrs Lane, but not including building on the New Zealand Golf Course.

Martyrs Lane is either previously developed or permission granted for development. Part of the site is public land and sale of it would provide funds to the local council which could be used to help fund other services that benefit the residents in the new properties and those in the surrounding area.

There is enough land to not need to develop the New Zealand Golf Course or the land behind Woodham Road.

The proximity of the site to the A320 means it is better situated to allow access for the lorries that will be required for the building and construction work without having to pass by areas containing schools and avoiding going through the town centre.

Recent works to upgrade the water supply along the A320 would provide an easier means of connecting new properties to the mains supply along with other utilities. Other areas would require expensive and disruptive work to provide connection. A single site enables all the required services and utilities to be more easily provided for and doctors and other amenities could be located in a central area that best serves new residents.

The site offers good access to the A320 and major roads such as the M25 and Woking town centre. There are better designed with footpaths and cycle lanes already in place with adequate street lighting. Other areas have narrow lanes with little or no foot paths or street lighting.

The Martyrs Lane site also places it closer to a number of major employers.

The Martyrs Lane site is the most suitable and cost effective option and will have the least impact and disruption.

### **Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste

safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet and West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02568/1/001  
**Customer Name:** Mr Jonathan Hastings

### **Summary of representation:**

Martyrs Lane is more favourable compared to the other six sites. It is just off the A320 which is a main road to the M25. This will also simplify the logistics for any building work on the site.

The Upshot Lane sites are used for agriculture and in the Green Belt.

Martyrs Lane makes logical sense.

### **Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation outlining the logistical benefits of Martyrs Lane is noted. However it should be noted that the purpose of the consultation is to inform the Council's decision on its preferred safeguarding option and the overriding consideration is to ensure that the most sustainable location for future development is selected when compared against all other reasonable alternatives.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. It should also be noted that the majority of the other six sites are not used for agricultural purposes. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

To clarify, all of the proposed safeguarding options are located on sites that are currently within the Green Belt. This includes the land to the east of Martyrs Lane as well as the original six sites identified for safeguarding in the draft Site Allocations DPD. Although the Martyrs Lane site contains some existing buildings and structures, including sports facilities, agricultural buildings and residential properties, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 00244/2/001  
**Customer Name:** Ms Jill Wakefield

**Summary of representation:**

The site is not suitable for a village as it is close to Ottershaw and New haw.

Horsell Common is not available for building.

**Officer Response:**

The representation regarding the sites proximity to New Haw and Ottershaw has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. In particular, the Council's Landscape Assessment and Green Belt review (2016) by Hankinson Duckett Associates considered the distance between the site and neighbouring settlements. The report concluded that the land to the east of Martyrs Lane is of critical importance to the purposes of Green Belt and that the land prevents urban sprawl and prevents towns merging. However it does also note that the Bourne River and associated flood zones to the north of the site act as a very strong durable boundary in preventing encroachment beyond that point.

The site boundary of the land to the east of Martyrs Lane is clearly set out in the consultation paper. To clarify, the area of land subject to the consultation does not include Horsell Common. Although it is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common, the Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

**Contributor Reference:** 02559/1/001  
**Customer Name:** Ms Claire Ritchie

**Summary of representation:**

Green Belt land should only be used in exception circumstances and this site does not fulfil this requirement.

Development would have a significant adverse impact on the area and wildlife.

The infrastructure would not be able to cope with proposed development. The road network is already at capacity and congested and development will have a negative impact on current residents.

Local medical facilities are already at capacity such as dentists, schools, doctors and hospitals. Further development will make the situation worse.

The site is not a sustainable or viable option for housing development.

**Officer Response:**

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, in the opinion of the Council the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. The overriding consideration for this consultation is to identify the most sustainable location for future development when compared against all other reasonable alternatives.

Most of the housing need for the borough is internally generated and it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. The Council has a number of planning policies in place to make sure that development is of high standards and sympathetic to the general character of the area. By supporting development with adequate infrastructure, this will help to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Overall the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

Regarding the representation on wildlife, the Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

The Council accepts that it has not carried out a detailed ecological assessment of the site, and recognises the importance for doing so. However, the appropriate time to undertake such a

study would be at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02497/1/001

**Customer Name:** Pyrford Green Belt Action Group

**Summary of representation:**

Objects to development at Pyrford and supports the proposal for development at Martyrs Lane for future development needs. All Green Belt should be protected.

Martyrs Lane and the other six sites are not the only options and the Council has presented an invalid and socially divisive proposition. The consultation does not create a strong community spirit as set out as one of the aims of the Core Strategy.

None of the six sites are safeguarded and therefore the consultation question is inaccurate.

Housing development in the Green Belt contradicts the Spatial Vision and objectives of the Core Strategy. Objects to the principle of Green Belt development as Green Belt is a finite resource and contradicts the Government's commitment to protect it, which is reaffirmed in the Housing White Paper. Urge Woking Borough Council to halt dismantling the Green Belt.

All brownfield land should be allocated first and Woking Council does not yet have a Brownfield Register in place.

Housing numbers in Woking should be reviewed as the existing infrastructure can not cope and the provision and location of new supporting facilities is unplanned. Green field sites are now being considered for development and this contradicts Policy CS6 as well as the Council's Vision for 2050 and the Natural Woking Strategy.

Object to development proposals on floodplains.

Calls on the Council to abandon the policy of safeguarding land for future development needs as it is an unsatisfactory method of choosing the future direction of development in the Borough. If the Martyrs Lane proposal can be considered at the last minute then this could repeatedly happen and the Green Belt will continue to be eroded. The Safeguarding process allows developers to choose land for themselves without the agreement of local communities.

The Council has identified land to deliver at least 900 dwellings in the plan period which is well in excess of the 550 homes in the Core Strategy, The intention to remove land for a further 1000 homes can not be justified.

Object to development proposals in Pyrford for the following reasons.

The sites have been selected based on a faulty process. Repeats paragraph 83 of the NPPF. The decision is based on inadequate evidence and can not be justified.

The Green Belt boundary review stated that GB12 serves two critical Green Belt purposes; restricting urban sprawl and safeguarding the countryside from encroachment.

The site was assessed to be only the 18th of 31 sites in terms of sustainability. It is not near a town centre, secondary school or GP and public transport is limited.

Availability of land has been given great weight in the Green Belt review methodology. It is not a relevant consideration when selecting sites for safeguarding beyond the plan period.

GB13 selection is not rationalised or transparent. It was not supported in the Green Belt boundary review.

The sustainability appraisal scores the two fields as a double negative for the impact development would have on natural, historic and cultural assets, and landscape. The Green Belt Review correctly stated there to be a Major environmental constraint to developing both fields. The fields were assessed as ranging from having a strong unspoilt rural character to a predominantly intact rural character having little or no capacity for change. The rural character of the area is valued by residents and visitors alike.

Both Pyrford fields are in an environmentally sensitive area with the sites containing a wide range of biodiversity features.

The area is on the escarpment and protected by Core Strategy Policy CS24. The Surrey Landscape Character Assessment notes the rural feel to the area and that the fields provide an important setting for the extensive heritage assets of the area.

The footpaths and bridleways are of special importance and used for recreational purposes. This is supported by the Natural Woking Strategy regarding green infrastructure.

The Government Housing White Paper recommends higher density building. This is inappropriate in Pyrford, an area surrounded by Conservation Areas. The genuine need for smaller properties would be better met elsewhere. Prospective developers of the Pyrford fields would most likely wish to build large executive homes which would not satisfy the need for genuinely affordable housing.

Pyrford Neighbourhood Plan has not allocated housing on the Green Belt in the Forum area; this is because there is a clear wish by the community to keep the fields in the Green Belt.

Two petitions in the area highlight that there is local objection to development in this area. The Council has not listened to the views of the community. Almost all of the representation received as part of the Regulation 18 consultation were dismissed.

As per paragraph 84 of the NPPF, local planning authorities should take into account promoting sustainable patterns of development. Changes to the road network in Pyrford would

harm the character of the area and the existing roads are congested. There is a significant amount of development taking place in this area.

Additional traffic will also increase noise and air pollution which is damaging to people and wildlife, this is not sustainable development. No attention has been paid to cycle routes or safety.

The existing healthcare facilities are not within Pyrford and it is unclear whether they can support additional patients.

The Pyrford school is over subscribed. The framework for securing the necessary infrastructure to support development is severely compromised.

The NPPF states that agricultural land should be taken into account. English Nature have stated that the Pyrford fields have not been examined to determine their agricultural grade and the Green Belt boundary review states that Agricultural Land Classification is not a major constraint at this stage. It is wrong to remove these sites from the Green Belt without knowing the status of this land.

#### **Officer Response:**

Objection to the principle of Green Belt development and in particular the safeguarding of land in Pyrford for future development needs is noted.

Support for the Martyrs Lane proposal is also noted.

Whilst some of the land within the Martyrs Lane site contains existing structures and buildings, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites.

As part of the Site Allocations DPD process the Council has considered about 125 sites in total. These sites were all individually assessed prior to the publication of the draft Site Allocations DPD as part of the Sustainability Appraisal (SA) Report. At the Regulation 18 stage, the Council highlighted that the consultation presented an opportunity to submit new sites for consideration as well as further evidence to support sites previously considered by the Council. A number of new sites were submitted to the Council at this stage and they were all assessed against the same sustainability criteria set out in the SA. The Officer's Report to the LDF Working Group on the 1st July 2016 sets out why these additional sites were supported or rejected.

The Council has also now carried out an additional public consultation exercise on the possibility of substituting the six original sites identified for safeguarding in the draft Site Allocations DPD for the land to the east of Martyrs Lane.

Based on the above, the Council has considered a number of sites across the borough and has considered the merits of these sites through a consistent methodology. This is all available on the Council's website.

It is not considered that the Martyrs Lane consultation is socially divisive or conflicts with the aims of the Core Strategy. The purpose of the consultation is quite clear; it is to gather evidence from stakeholders and the public to inform the Council's decision on its preferred safeguarding option. By allocating specific sites for development, in both the Green Belt and urban areas, this will also help to deliver one of the other aims of the Core Strategy which is to 'give local people and key workers access to good quality and affordable housing'.

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79–95 Lovelace Drive, Teggs Lane, Pyrford

GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the emerging Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

The requirement to safeguard land for future development needs as part of the plan-making process is set out in paragraph 85 of the NPPF, in particular bullet points 3, 4 and 5. As set out in the draft Site Allocations DPD, the land to the east of Martyrs Lane consultation paper and the Regulation 18 consultation Issues and Matters Topic Paper, the Council is seeking to establish the principle of safeguarded land to ensure the development plan is in general conformity with the requirements of the NPPF. The release of these proposed safeguarded sites for development will only be considered following a review of the Core Strategy and or the Site Allocations DPD. The Council has also sought legal opinion on the requirement to safeguard land for future development needs. The legal opinion, as set out in the Minutes to the LDF Working Group (1st July 2016), stated that 'It has been suggested that the Council does not need, either through the Green Belt boundary review or the draft Site Allocations DPD, to identify land or sites to meet the projected housing need for the period 2027 to 2040. However, I consider that, hitherto, the Council has clearly adopted the right approach and would be committing a justiciable error if it proceeded otherwise'. It concluded by stating that 'The Council has adopted the correct approach in seeking, through the Green Belt boundary review and the Site Allocations DPD to identify land or sites to meet the projected housing need for the Borough in the period between 2027 and 2040'. The Council therefore considers the Site Allocations DPD, and in particular the safeguarding of land for future development needs between 2027 and 2040, to be consistent with national planning policy.

As set out in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Core Strategy Examination Inspector not only recommended the release of Green Belt land for housing development, but also was prescriptive about its process and timing. The Core Strategy, which is an adopted Council document and forms part of the Development Plan for the borough, commits the Council to prepare a Site Allocations DPD to release Green Belt land for development.

Whilst the Housing White Paper reconfirms the government's commitment to protecting Green Belt land, the White Paper does not propose any material change in national Green Belt policy. The Core Strategy was prepared and found sound in the context of the NPPF and in particular the Green Belt policies within it.

As set out in the draft Site Allocations DPD, the Council proposed to allocate 52 sites within the existing urban areas for a range of development uses. The spatial distribution of these sites highlights that the majority of the sites fall within Woking town centre where high density mixed use development is encouraged, as set out in Core Strategy Policy CS1 and CS2.

Core Strategy Policy CS6: Green Belt states that the Green Belt has been identified as a direction of growth between 2022 and 2027. At the examination of the Core Strategy the Council was able to successfully demonstrate to the inspector that from 2022, it would be unable to identify enough land in the existing urban areas to meet its housing needs. The Core Strategy is therefore prioritising development within the existing urban areas (previously developed land) before releasing land in the Green Belt towards the end of the plan period.

As stated in The Town and Country Planning (Brownfield Land Register) Regulations 2017 (3) (2), 'Each local planning authority must publish their register by 31st December 2017'. Whilst the Council accepts that it has not to date published its Brownfield Register, it intends to do so in accordance with the regulations.

The representation regarding examining all other reasonable options for meeting housing needs has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

The Site Allocations DPD is not an opportunity to review the Council's housing requirements, as suggested in the representation. The Site Allocations DPD has a very clear and specific aim of identifying sites that will facilitate the comprehensive delivery of the Core Strategy. A review of the Council's housing requirements will only be considered at a review of the Core Strategy. For information, the Council's Strategic Housing Market Assessment (2015) (SHMA) shows that the borough's housing need is far in excess of the annual housing requirement of the Core Strategy at 517 dwellings per annum.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Whilst the Site Allocations DPD seeks to remove around 3.5% of the Green Belt for development needs up to 2040, it is important that the sites identified are the most sustainable when compared to all reasonable alternatives and they do not undermine the overall purpose and integrity of the Green Belt.

The Council has addressed the representation on flooding in the Regulation 18 consultation Issues and Matters Topic Paper. In short, none of the six original proposed safeguarded sites are within Flood Zone 2 or 3. At the Martyrs Lane site, although containing some areas of Flood Zone 2 and 3, development would be directed to the 91.5% of the site that falls within Flood Zone 1.

Safeguarding land for future development needs does not allow developers to choose land for development without the agreement of the local community. Safeguarded land will only be released for development following a review of the Core Strategy and or the Site Allocations DPD. In respect of the Pyrford sites, at this stage the Site Allocations DPD only seeks to safeguard land. It also does not remove the requirement to obtain planning permission as part of the development management process. In terms of community engagement in the process, the Council has a Statement of Community Involvement which sets out how the community is able to engage in the planning process and what the Council will do to raise awareness of planning consultations.

It is considered that the procedural matters of the Site Allocations DPD process is consistent with planning regulations and all legal requirements. These matters of procedure will be considered by an independent inspector at the examination of the DPD as part of the Test of Soundness.

As set out in paragraph 83 of the NPPF, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The case for exceptional circumstances is set out above as well as in the Regulation 18 consultation Issues and Matters Topic Paper. It should be noted that the Site Allocations DPD will form part of the Development Plan for Woking Borough and will facilitate the delivery of the Core Strategy. By reviewing and altering the Green Belt boundary as part of this plan-making process, the Council is following the requirements of paragraph 83 of the NPPF.

The representation regarding inadequate evidence has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

As set out in table 3.2 of the Green Belt boundary review, all parcels of land except for parcels 3,5,6 and 29 of are significant, major or moderate importance to the purposes of Green Belt to some degree. The conclusions of the Green Belt boundary review state that 'the landscape assessment notes that this site (GB12) is more discrete, partly contained by trees and set beyond the prominent slopes to the east. The site is therefore under consideration for release from the Green Belt'. The Council's SA Report as well as the Regulation 18 version of the Site Allocations DPD set out specific design and mitigation measures to ensure that development can be suitably accommodated on the site.

Regarding accessibility to services and facilities, it is correct that GB12 and GB13 are not within reasonable walking distance of Woking town centre or an existing secondary school. Nevertheless they are within a reasonable walking and cycling distance of Pyrford Neighbourhood Centre which meets the day to day needs of local residents. They also benefit from a limited public transport service. The Council recognises that regardless of what sites are safeguarded for future development needs, it will be necessary to work with bus service providers to improve service provision and frequency.

The representation on the Green Belt boundary review methodology has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the representation on the land availability, availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. Paragraph 182 of the NPPF deals with examination of local plans and it requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- o Should be deliverable over its period;
- o Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of all seven proposed safeguarded sites at both the Regulation 18 stage and Martyrs Lane consultation.

As part of the Site Allocations DPD process, the Council has written to landowners of all of the sites in the DPD, to confirm the deliverability of the sites included within it. As set out in the draft document, the six proposed Regulation 18 safeguarded sites are considered to be deliverable based on the information submitted by the landowners. As part of the Martyrs Lane consultation, the Council has written to the various landowners within the site boundary. For information, the New Zealand Golf Course and McLaren Technologies Limited have confirmed that the land in their respective ownership will not be made available for residential development. It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the Martyrs Lane site is the most sustainable when compared with the original six safeguarded sites.

The decision to safeguard the land in the draft Site Allocations DPD is well evidenced and the full list of evidence documents is set out in the draft Site Allocations DPD as well as on the Council's website. This is also set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The reasons why the sites scored a double negative for conserving and enhancing the natural, historic and cultural assets and landscapes of Woking are clearly set out in the SA. The SA however identifies that the impacts could be mitigated by detailed site layout and design to retain as much openness as possible and landscape buffers to reduce the visual impact of development. For GB12 in particular, this is similar to the recommendations set out in the Green Belt boundary review.

The Surrey Landscape Character Assessment defines the landscape character of the wider Surrey area and provides a detailed assessment of the land to the south-east of Woking (parcel SS10: Woking to Byfleet Settled and Wooded Sandy Farmland) which includes both GB12 and

GB13. It does not specifically assess these two sites as the assessment is a strategic one and not site specific. Nevertheless the Evaluation and Guidance of parcel SS10 makes recommendations of how development could be appropriately accommodated within the assessment parcel. Based on this information, the Council is satisfied that development can be achieved within sites GB12 and GB13 without creating a significant adverse impact on the landscape character of the wider area as well as the specific heritage and landscape designations on and in close proximity to the sites.

Regarding the representation on biodiversity, the Council has consulted with the relevant statutory and non-statutory consultees on this matter and their representations have been taken into account in preparing the Site Allocations DPD. The Council is committed to working with these consultees during the plan making process and beyond to ensure that any of the sites allocated or safeguarded for development do not have a significant harmful impact on biodiversity that can not be mitigated.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The public rights of way in the area are noted and are specifically referred to in the key requirements set out in the proposed safeguarding allocation. Although the public rights of way provide amenity and recreation value, the overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives. Any existing public rights of way on or adjacent to any of the proposed sites would be considered at the development management stage in detail.

Regarding the Housing White Paper: Fixing Our Broken Housing Market, the White Paper sets out a number of proposed amendments to the NPPF in paragraph 1.53. The first proposed amendment seeks to increase housing density where there is a shortage of land for meeting identified housing need and the second proposed amendment seeks to increase residential density in urban locations that are well served by public transport. However it should be noted that the third proposed amendment set out in the White Paper seeks to ensure that the density and form of development reflect the character, accessibility and infrastructure capacity of an area, and the nature of local housing needs. This is broadly consistent with the policies of the Core Strategy and the Development Management Policies DPD as well as the design principles set out in the Woking Design Supplementary Planning Document (SPD). Therefore development of any of the proposed Green Belt sites, including those proposed to be allocated for safeguarding, should be designed to the highest design standards and ensure that housing density does not affect the quality and character of an area and the general well-being of residents.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Whilst the Pyrford Neighbourhood Development Plan is now adopted and part of the development plan for the neighbourhood area, it should be highlighted that the plan is in general conformity with the strategic policies of the area. In this case, the neighbourhood development plan is in general conformity with the Core Strategy and emerging Site Allocations DPD. As set out in Planning Practice Guidance neighbourhood plans should make sure the ambition of the neighbourhood is aligned with the strategic needs and priorities of the wider local area. Neighbourhood Plans are not a tool to prevent development and this is clear in the neighbourhood planning regulations.

The public consultations carried out by the Council on the Site Allocations DPD, namely the Regulation 18 consultation and the Land to the east of Martyrs Lane consultation, have provided local communities with the opportunity to engage in the plan making process. They will have further opportunities to engage in the process during the Regulation 19 consultation and at the Examination.

The petition against development in Pyrford has been considered by the Council at its meeting on the 20th October 2016. The Minutes of the meeting and the Council's response are available on the Council's website. It is therefore incorrect to suggest that the petition has not considered by the Council.

The Council has responded to each of the representations made during the Regulation 18 consultation and taken them into account. The Council's response to each of the 32,712 separate representations can be found online. The Council also prepared an Issues and Matters Topic Paper outlining the Council's response to a number of similar concerns that were raised by the public and other stakeholders. Although the majority of representations did not result in any proposed modifications to the document, the comments were carefully considered and addressed. The fact that a representation did not result in any modifications does not mean that it was not considered.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

As set out in the list of transport evidence base documents above, the Council has carried out an assessment of the development impacts of the Site Allocations DPD in combination with the development proposals within the wider area. This study is on the Council's website.

The environmental implications of development, regardless of whether it is in Pырford or elsewhere, will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

Public transport services and infrastructure currently serving the vicinity of the both the Martyrs Lane and the other six sites are relatively limited. The Council recognises that regardless of what sites are safeguarded for future development needs, it will be necessary to work with bus service providers to improve service provision and frequency.

The representation regarding cycle routes and safety are noted and will be drawn to the County Council's attention. Nevertheless any existing cycle routes, including their provision, quality and connectivity, will be considered in detail at the development management stage regardless of what sites the Council decides to allocate in the Site Allocations DPD. This applies to both urban area and Green Belt sites.

In addition to the infrastructure response above, the Council is working with the Clinical Commissioning Groups (CCGs) to identify healthcare provision and distribution across the borough to ensure that provision supports planned development.

The representation regarding education provision has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council considers that based on the evidence used to inform the Core Strategy that planned development in the borough can be supported by adequate infrastructure provision. The Council is currently updating its Infrastructure Delivery Plan to reflect any further infrastructure requirements and this will be published prior to the Examination of the Site Allocations DPD. The Council, as part of this update and as part of the Site Allocations DPD process, is continuing to work with the relevant infrastructure providers and operators to mitigate any future development impacts.

Regarding agricultural land classification, as part of the preparation of the Site Allocations DPD process, the Council has undertaken a review of agricultural land quality within the borough. This has included reviewing the Agricultural Land Classification Database as shown on the DEFRA website. This database is produced and maintained by Natural England. None of the proposed allocated or safeguarded sites are located on land designated as high quality agricultural land.

In addition, the Council has consulted with Natural England as part of the Site Allocations DPD process. Natural England has not raised any objections regarding the agricultural quality of any of the sites identified for release from the Green Belt for development needs. Natural England's representation to the Regulation 18 consultation and Land to the east of Martyrs Lane

consultation are available to view on the Council's website. The representation also makes reference to the Green Belt boundary review regarding this matter. The report states that for Parcel 9, the agricultural land classification for the land adjacent to the urban areas is classified as 'urban' which is consistent with the Regional Agricultural Land Classification Maps produced by Natural England.

**Customer Name:** Giles Allington

**Summary of representation:**

Supports the Martyrs Lane proposal.

The Martyrs Lane site will have the least impact on the natural environment and prevents the loss of pristine agricultural land. It will also affect fewer residents quality of life and has better road access and utility provision.

More housing is required in the borough and this should be achieved with the least impact on the natural environment and local character. This can be achieved by using this low grade and partially derelict land.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

During the preparation of the draft Site Allocations DPD the Council consulted with Surrey Wildlife Trust and Natural England to discover the biodiversity value of each of the original six sites. Overall the preferred sites did not raise any objection from these organisations based on existing biodiversity features. The Council has consulted these organisations as part of the Martyrs Lane consultation and will respond to their representations separately.

Regardless of whether the Council safeguards Martyrs Lane or the six original sites for future development needs, the Council is committed to conserving and protecting existing biodiversity assets within the borough. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. These policies would apply to development at any of the proposed sites.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The social and environmental implications of development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require

development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage regardless of the Council's preferred safeguarding option.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding utility provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02503/1/001  
**Customer Name:** Mr Ian Lamaison

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site and part of it is pre-developed land and now semi-derelict.

The northern site is publicly owned land so the sale would help council tax payers.

Fewer residents would be impacted with one site in the northern part than by six individual sites.

The northern part of the site is well served with public transport unlike the other six sites and has access on to the A320 towards Woking town centre and the M25.

The land is a single site, has been previously developed, is partially derelict and less than half is necessary to meet Borough requirements.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without

the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02506/1/001  
**Customer Name:** Mr Alexander Ritchie

**Summary of representation:**

Road network cannot cope with proposed increased amount of housing.

There is already difficulty with current local services.

Green Belt should not be used before exhausting all brownfield options.

Development would result in the loss of the historic New Zealand Golf Course.

**Officer Response:**

The representation regarding road infrastructure and wider infrastructure provision such as medical facilities, has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

The Council has comprehensively assessed brownfield sites as part of the evidence to inform the Site Allocations DPD. As part of this exercise, it has carried out and published a Sustainability Appraisal (SA) that assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives, including environmental, social and economic objectives. The SA and the full list of other evidence base documents can be found on the Council's website. More information can also be found in the Regulation 18 consultation Issues and Matters Topic Paper.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. This may include the development of the New Zealand Golf Course. However it should be noted that the Zealand Golf Course has confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes.

**Contributor Reference:** 00650/2/001  
**Customer Name:** Robin I Morgan

**Summary of representation:**

Objects to the proposed development of land adjacent to Martyrs Lane. The earlier proposals for smaller development around the borough were a better solution to the requirement to provide additional housing. Martyrs Lane is in an unsuitable location. I do not see that the new scheme has any benefits over the earlier proposals.

Objects to the loss of Green Belt. The McLaren planning permission, although a loss of Green Belt land, was justified by economic reasons. There is no similar justification for this proposal. Green Belt land should be protected from development as stated in Green Belt policy.

The proximity of the proposed development of Fair Oaks airport will create urban sprawl.

Woking Borough Council prides itself on its care for the environment. If this plan goes ahead, the council and the councillors who voted for it will lose all credibility.

The present road system will be totally inadequate for the traffic which would be produced by the development. The A320 and A245 are at capacity and would need to be significantly widened to cope with future traffic flows, leading to the loss of considerable amenity to the borough. The site would not be able to form a new northern access point other than by a new road link to St Peter's Way.

It is a better solution to develop the land between St Peter's Way, the M25, the A320, Murray Road and Spinney Hill. This would have the great advantage of having direct access to the M25 and easy access to Addlestone and Chertsey Stations.

The Martyrs Lane proposal will simply increase rush hour congestion at Woking Station where access from the north is totally inadequate.

I agree with those who object on infrastructure, wildlife, woodlands and the recycling centre grounds.

The proposal seems to be unconsidered and impractical.

**Officer Response:**

Objection to the Martyrs Lane proposal and support for the previous safeguarding strategy is noted.

The representation regarding the principle of Green Belt development, the McLaren planning permission and urban sprawl have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Regarding the representation on the environment, as part of the preparation of the Site Allocations DPD the Council has undertaken a Sustainability Appraisal (SA) which provides a consistent approach to describing, analysing and comparing the sustainability effects of the various options and the specific proposals of the Site Allocations DPD. This includes an assessment of the effects of development on the natural environment. The SA Report is on the Council's website. The overriding consideration of this particular consultation is to inform the Council's decision on its preferred safeguarding option and to ensure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Although the Council notes the suggestion to develop land near St Peters Way/M25/A320/Murray Road/Spinney Hill, it should be noted that this land is outside of Woking Borough and the Council is unable to allocate land for development outside of its administrative boundaries. Nevertheless, the Council is of the opinion that there is suitable land within the Borough that can be developed to meet the Borough's housing requirements without development having a significant adverse impact on the quality of life of residents and the environment.

The representations regarding traffic and road infrastructure, general infrastructure provision, wildlife, woodlands and the Martyrs Lane Recycling Centre have all been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

**Contributor Reference:** 02508/1/001

**Customer Name:** Akeel Sachak

**Summary of representation:**

Support for the Martyrs Lane proposal.

Much of the Martyrs Lane site has already been used for non-agricultural purposes and is not high value agricultural land

The cost of this land in this area is much lower than in Pyrford providing an opportunity to provide affordable/social housing

A single site would provide economies of scale to address infrastructure issues

The site is well served with public transport unlike all the other six sites

The site has easy access on to the A320 with its direct road links to M25 and to Woking town centre

The site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency

Part of the site is publicly owned land so the sale would help council tax payers

Fewer Woking residents would be impacted with one site in the northern part of the borough than by six separate sites and the nominated area has a very small number of existing residential properties

Building on the Pyrford Green Belt fields would mean using land that is currently used for agricultural purposes

The Pyrford school is full to capacity while a new development at Martyrs Lane can provide a new school

The West Byfleet Health Centre is operating at maximum capacity. Martyrs Lane offers an opportunity to build a new health centre

The Pyrford/West Byfleet traffic situation is already acute with severe congestion.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and

still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along both the A320 and A245 corridors. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites. It should be highlighted that

the purpose of this consultation is to inform the Council's decision on its preferred safeguarding option to ensure that the most sustainable land is identified to meet its future development needs. It is not to identify land that is isolated and or has few existing neighbouring properties.

**Contributor Reference:** 02509/1/001  
**Customer Name:** Mr Peter Fingland

**Summary of representation:**

The site is under utilised wild land and large enough to accommodate 1024 dwellings.

There are two significant roads adjacent to the site which provide good access. By including the New Zealand Golf Course there is a risk that about 3000 homes could be built which would overload the area. 1024 homes should be the maximum.

Many of the alternative sites proposed are on utilised or farmed land.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02522/1/001  
**Customer Name:** Ms Lucinda Lloyd

**Summary of representation:**

Awful idea. Will result in the loss of Green Belt land and put pressure on local services and infrastructure. It will also involve the loss of wildlife and woodlands.

Oppose the proposal.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The representation highlighting reasons against development at Martyrs Lane has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

**Contributor Reference:** 02452/1/001  
**Customer Name:** Mrs Sandra Simkin

**Summary of representation:**

Supports the Martyrs Lane proposal as development is not wanted in Mayford.

No Green Belt land should be used for development and the current consultation is putting opposing communities against each other across the borough.

Woking Borough Council wants to remove all Green Belt land and once Martyrs Lane has been developed then there is a precedent for Green Belt development elsewhere.

Land values in Woking are high and so homes should be more affordable. Building on Green Belt results in more profits for developers than those on brownfield sites.

The Council never looks at the 800 empty properties in the borough that could be compulsory purchased and added to the housing stock or used to house people on the housing list.

No one ever challenges the need or number of homes specified, which was established by the Labour Government before 2010.

**Officer Response:**

Support for the Martyrs Lane site and objection to development in Mayford is noted.

Objection to the principle of Green Belt development is also noted. In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national planning policy. This has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular Section 1.0 and 2.0.

It should be noted that the purpose of the Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding option. The consultation is an opportunity for the Woking community as well as landowners and stakeholders to provide the Council with useful evidence to inform its decision on the matter. The intention of the consultation is not to put various communities within the borough against each other, as suggested in the representation.

It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the

sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

Whilst it is acknowledged that the Site Allocations DPD proposes to remove Green Belt land for development, the overall total of Green Belt land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.5% of the total Green Belt. When all of the allocated sites have been developed the Green Belt would be about 61.8% of the total area of the Borough and therefore the amount of land being proposed to be released is relatively modest.

By planning for growth in the borough through the plan led system it will ensure that the Green Belt is protected from speculative development and that an enduring Green Belt boundary will be established.

The Council agrees that affordability is a key issue in the borough, as set out in Core Strategy Policy CS12: Affordable housing. The Council has an affordable housing policy as well as a guidance document (Affordable Housing Delivery SPD) that facilitates the delivery of affordable housing. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability.

As set out in Core Strategy Policy CS12, new residential development on greenfield land will be required to provide more affordable housing than developments on previously developed land.

Regarding the representation on empty homes in the borough, the Council has an Empty Homes Plan 2015–2018 which seeks to minimise the number of empty homes through the Council's intervention and maximise the opportunities for returning empty homes back into use through initiatives and incentives. This is set out in further detail on the Council's website. Whilst empty homes could bring back properties into use, this alone will not meet the identified housing need in the Borough up to 2040.

The Council's housing need is clearly set out in the Strategic Housing Market Assessment (SHMA), which was last updated in 2015 and is available on the Council's website. The SHMA highlights that the actual housing need in the borough is 517 dwellings per year. As set out in Section 1.0 of the Regulation 18 consultation Issues and Matters Topic Paper, taking into account the available evidence including an assessment of various options of housing provision and the requirements of national planning policy (NPPF) as a whole, the Inspector of the Core Strategy examination agreed that the Core Strategy should make provision for an annual average housing requirement of 292 dwellings. This is therefore significantly below the objectively assessed need of 517 dwellings per year. It is therefore incorrect to suggest that the Council's housing need is based on policy requirements from before 2010.

**Contributor Reference:** 02454/1/001  
**Customer Name:** Ms Jane Armitage

**Summary of representation:**

Objects to development in Pyrford and supports the Martyrs Lane proposal.

There are enough brownfield sites that should be used before Green Belt land is used for development.

The Pyrford fields are used for agriculture and should be retained for this purpose. There is much local interest in keeping the site as fields. They could be used for organic / crop rotation farming that could be sold locally.

Martyrs Lane, other than the New Zealand Golf Course, has no current use at all.

The fields form part of the historical, rural landscape of the area as set out in the Pyrford Neighbourhood Plan.

The former Army Camp should be reused for emergency housing for the homeless, low income and key workers. This site is ideal for affordable housing that work at St Peters Hospital. Many workers could cycle to work as there is a cycle route in place already.

The former Army Camp is of local historic interest and could be incorporated into the development of the site, including a village hall. Surrey History Centre can provide more information.

Evidence suggests that Pyrford is one of the best walking areas of the UK. Development would have a negative impact on walkers and the views of the landscape.

Many people use the local footpaths for recreational purposes. The area is a beautiful rural area and recommend that Woking Borough Council visit the footpaths suggested in the representation.

Infrastructure like water, waste, and electricity in Pyrford is already stretched.

Development of several sites will cause traffic disruption to many residents. Pyrford is likely to be affected by development in the area including Wisley Airfield, Broadoaks and Sheer House in West Byfleet. No more development in needed around Pyrford.

Pyrford School causes disruption and is at capacity. A new school could be built at Martyrs Lane.

The West Byfleet Health Centre is at capacity and a new facility could be built at Martyrs Lane.

The local bus service is underused in Pyrford. There will be more of a need for public transport links from Martyrs lane especially if there is more key worker, low income families living at that site. A bus service between the site and Woking town centre would be an asset and reduce air pollution and boost jobs for local people. A route to Woking Station would also boost the area.

The historic woodland around Pyrford Court is important and of local interest.

The flood plain on the Martyrs Lane site should be used as a wetland area to promote biodiversity and general well-being. This will have a positive impact on the NHS. A lake could be formed and used for recreational purposes.

A retirement village can be built on the site and Mayford Grange is a good example in the borough. If the Council reviews the developments carried out by this developer then it will provide ideas on how to solve the housing shortage in the local area.

#### **Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane site is noted.

The Council has addressed the representation regarding previously developed land in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 11.0. It should be noted that overall about 125 alternative sites were appraised by the Council in preparing the draft Site Allocations DPD. This is set out within the Sustainability Appraisal.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst the fields in Pyrford could be used for organic / crop rotation, it should be noted that the land is not owned or managed by the Council and therefore has no influence in what is grown on site.

It is incorrect to suggest that the land within the Martyrs Lane site is unused as the site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of

Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Regarding the representation on using the former Army Camp for residential uses, the Green Belt Boundary Review assessed the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land from the Green Belt would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. This is also supported in the Sustainability Appraisal for the site known as Woodham Court.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity major employers, including St Peters Hospital. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station and some local services and facilities, the northern part of the site is not within reasonable cycling or walking distance of employment areas, railway stations and existing services. There are therefore no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the provision of a village hall, school and health centre, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding and that any land removed from the Green Belt will not undermine its overall purpose and integrity.

The representation regarding infrastructure in Pyrford has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 3.0 which refers to transport and road infrastructure, water and drainage provision and education. It should be noted that the Council has consulted with the relevant utility providers and their representations will be taken into account when preparing the Site Allocations DPD for Regulation 19 consultation.

The Council has also worked with the County Council and the other Surrey authorities to prepare the Cumulative Assessment of Future Development Impacts on the Highway. A Duty to Cooperate Statement will be published to demonstrate the extent of cooperation between the two authorities and with other relevant organisations and neighbouring authorities. The proposals of the DPD are informed by comments from the County Highways Authority and the Council is committed to continue to work positively with them and Highways England throughout the Site Allocations DPD process and beyond to address common and strategic transport issues of the area.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and trees within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area.

The suggestion for a wetland area and lake are noted. Should the Council decide to safeguard the site for future development needs, then the masterplanning of the site will be considered at the Development Management stage. This would also include some input from relevant stakeholders such as the Environment Agency and Natural England.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

**Contributor Reference:** 02456/1/001  
**Customer Name:** Mr Nigel P Butt

**Summary of representation:**

Martyrs Lane is the only viable development which should be considered.

It is previously developed land, which is largely derelict and does not have a network of footpaths or is it an area of outstanding natural interest or beauty.

Upshot Lane has great beauty, been productively farmed and has a network of footpaths and rights of way.

The Martyrs Lane site was granted planning permission for a McLaren development.

There are three large employers near the Martyrs Lane and they would all benefit from a housing development on the Martyrs Lane site.

The Martyrs Lane are is lowly populated and the infrastructure is more robust to handle increased demand for roads and other facilities.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for

its preferred approach to safeguarding. It should also be noted that the majority of the six original sites do not contain public footpaths.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

The Green Belt boundary review assessed the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a

single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding the impact of development on the existing community is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02458/1/001

**Customer Name:** Mr Paul Miles

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02459/1/001  
**Customer Name:** Ms Cathy Comber

**Summary of representation:**

One large site could easily provide a school, doctor's surgery and it would not overload existing facilities near the other six sites.

Development has previously been approved for the site unlike the original six sites.

Green Belt in Pyrford is used for recreation activities.

The Pyrford sites are an integral part of the heritage setting of Pyrford and are protected by CS24 – Escarpments and Rising Ground of landscape importance.

The New Zealand Golf Course should be excluded as the number of houses needed can be delivered on the remainder of the site.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding the exclusion of the New Zealand Golf Course from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land

to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Contributor Reference:** 02463/1/001  
**Customer Name:** Miss Vicki Sullivan

**Summary of representation:**

Support for the Martyrs Lane site excluding the New Zealand Golf Course.

A single site would provide the opportunity for creating jobs, a school and medical centre and would alleviate the pressure on the existing local ones.

The land has none of the character, history and natural beauty associated with the land in Pyrford that is enjoyed by many walkers every day, unlike the Martyrs Lane site.

A single site would be more cost effective and would mean less impact on local residents than if six individual sites were developed.

The single site is very well served with public transport unlike the other sites. It also has access on to the A320 providing easy links to M25 and Woking. Any development on the Pyrford sites would cause more congestion and danger on the very small roads.

The site is close to major local employers.

The top part of the site was recently granted planning permission.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

Whilst the representation notes that the New Zealand Golf Course should not be developed as the site is large enough to accommodate 1024 dwellings, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on infrastructure provision the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary

infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Residential development at any of the safeguarded options should be able to meet the infrastructure requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst some Green Belt land in the borough offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits

of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

**Contributor Reference:** 02467/1/001  
**Customer Name:** Mr Reece Humphreys

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The site includes previously developed land and is now semi-derelict

The northern site is publicly owned land so the sale would help council tax payers

The site has been used for non-agricultural purposes.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers.

Fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming

the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02480/1/001  
**Customer Name:** Mr Dennis Bailey

**Summary of representation:**

Supports the proposal to consolidate the six sites into one. This would address the infrastructure issues of the six sites and allow for the provision of new facilities such as a school and health centre.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It should be noted that the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should also be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course. The site is large enough to accommodate the required housing numbers. The golf course provides important leisure and employment amenity for residents.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land unlike some of the other sites which are used for recreation.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

Fewer residents will be disrupted by one site then by six individual sites.

The site has been used for non-agricultural purposes. The site excluding the golf course is previously developed and has a lower land value. Agricultural land in Pyrford will have a higher land value. The land to the north of the site is almost unused, pre-developed and derelict.

The northern part of the site is well served with public transport unlike the other six sites.

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. Surrey reports highlight that Martyrs Lane will have less impact on traffic conditions than the development proposals for Mayford or the combination of developments proposed for Byfleet and Pyrford.

The northern part of the site is close to major local employers.

Part of the northern site is publicly owned land so the sale would help council tax payers. Surprised it was overlooked within the initial review.

The Martyrs Lane site provides a viable option for housing expansion in the borough as it has the capacity.

**Officer Response:**

Support for the Martyrs Lane proposal has been noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation highlights that the site is large enough to not require the New Zealand Golf Course to be safeguarded, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf

Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL

contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is also correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Regarding the representation on land values, residential development at any of the safeguarded options should be able to meet the planning policy and infrastructure requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages between the sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along

the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to

exacerbate congestion along the A320 corridor between Woking town centre and the M25 as well as the A245 towards West Byfleet.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

To confirm, parcels of land within the Martyrs Lane site that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The three sites include Woodham Court, land to the east of Martyrs Lane (Waste safeguarded site) and land adjacent to 462 Woodham Lane. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too

isolated to be a standalone development. It is therefore incorrect for the representation to suggest that land within the site was originally overlooked.

The merits of the New Zealand Golf Course as well as the remainder of the Martyrs Lane site for safeguarding will weigh in the balance of considerations by Members.

**Contributor Reference:** 02472/1/001  
**Customer Name:** Mr Mohammed Khan

**Summary of representation:**

The site does not have the capacity and road infrastructure to support this amount of housing, especially taking into account other development in the area including Sheerwater, St Peters Way Chertsey and Fair Oaks.

There is a need for affordable housing in the area so it would be better spread out over a number of sites that would have less impact on the Green Belt.

**Officer Response:**

Based on the Council's calculations, it is anticipated that the site can accommodate 1200 dwellings as set out in the Consultation Paper. Nevertheless, as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

If the Council decides to safeguard Martyrs Lane for future development needs then its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater and those at Fair Oaks and St Peters Way. Whilst the Council has undertaken Strategic Transport Assessments to inform the Site Allocations DPD, at this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable delivery of the major developments.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and achieve positive viability. The preference for a distribution of affordable housing however is noted and will be considered by Members.

The representation regarding the impact on the Green Belt and further information regarding the Council's traffic assessments have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02473/1/001  
**Customer Name:** Ms Alison Graham

**Summary of representation:**

The proposal puts too much strain on one area.

Traffic congestion is currently an issue in the area, particularly on the A320 and A245. The site is not within walking distance of a station and the bus service is poor. A complete overhaul of the bus network would be required. There is no medium/long term transport policy other than more car journeys which is not sustainable.

Development should be prioritised to areas which can offer rail connections within walking distance or effective public transport, roads without traffic hotspot issues or where roads can be widened. The A320 is adjacent to the Thames Basin Heaths SPA and a SSSI which are delicate habitats.

No consideration has been taken of development elsewhere, such as the one proposed for Fair Oaks Airport. In combination this will have a significant adverse impact on traffic and congestion as well as air quality.

If sites cannot be identified to ease traffic congestion, then development needs to be spread around the borough.

**Officer Response:**

The representation regarding the existing road network and congestion, the lack of public transport in the area and the Council's strategic transport objectives have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

In addition to the section on transport within the Topic Paper, the Council is aware of the potential development at Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of this development on the A320. However, the Council is working in partnership with Surrey Heath as well as Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the development, and in particular, the implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the major sites.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of

the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The representation regarding the distribution of development across the borough is noted and will be considered by Members. The overriding objective of this particular consultation exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

**Contributor Reference:** 02477/1/001  
**Customer Name:** Mr Andre Philpot

**Summary of representation:**

Support for the proposal at Martyrs Lane. The site is large enough to accommodate all the development needs on one site and also allow for additional development such as schools and health facilities. Due to the size of the site it would also accommodate additional housing if required in the future. The other sites do not offer this benefit.

Infrastructure provision can be implemented and will be more easier to do and cost effective. The other sites will not be able to support additional development.

The Martyrs Lane site has fast and easy access to the M25 and the surrounding area and there are also major employers nearby.

The site is mainly unused or derelict so development will regenerate the area and provide businesses to be created or relocated to support the new population.

It will preserve more of the Green Belt in other areas in the Woking which otherwise could be lost forever to the detriment of the people of Woking.

Planning permission has previously been granted for development on the site and there are few flood restrictions. The planning and development process should be easier and have reduced costs than the other proposed sites.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It should be noted however that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of

about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from

various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is

identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The safeguarding of Martyrs Lane for future development needs may not require Green Belt to be developed in other areas of the borough between 2027 and 2040. Nevertheless the overriding consideration of this consultation is to ensure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications.

The overall merits of the Martyrs Lane site will weigh in the balance of considerations by Members.

**Contributor Reference:** 02479/1/001  
**Customer Name:** Ms Kay Philpot

**Summary of representation:**

Support for the proposal at Martyrs Lane. The site is large enough to accommodate all the development needs on one site and also allow for additional development such as schools and health facilities. Due to the size of the site it would also accommodate additional housing if required in the future. The other sites do not offer this benefit.

Infrastructure provision can be implemented and will be more easier to do and cost effective. The other sites will not be able to support additional development.

The Martyrs Lane site has fast and easy access to the M25 and the surrounding area and there are also major employers nearby.

The site is mainly unused or derelict so development will regenerate the area and provide businesses to be created or relocated to support the new population.

It will preserve more of the Green Belt in other areas in the Woking which otherwise could be lost forever to the detriment of the people of Woking.

Planning permission has previously been granted for development on the site and there are few flood restrictions. The planning and development process should be easier and have reduced costs than the other proposed sites.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It should be noted however that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of

about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from

various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is

identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The safeguarding of Martyrs Lane for future development needs may not require Green Belt to be developed in other areas of the borough between 2027 and 2040. Nevertheless the overriding consideration of this consultation is to ensure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications.

The overall merits of the Martyrs Lane site will weigh in the balance of considerations by Members.

**Contributor Reference:** 02489/1/001

**Customer Name:** Mr And Mrs Nick And Gill Parker

**Summary of representation:**

Support the Martyrs Lane proposal. It will save a lot of Green Belt land and be confined to one area which will be less obtrusive to a lot of people and the surrounding area.

The site is mostly disused and the road infrastructure is already in place and cause less disruption.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It should be noted that the Martyrs Lane site is larger than the cumulative area of the six original sites identified for safeguarding in the draft Site Allocations DPD.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the site has access to the road network, this is also true of the other six sites which also have access to existing roads.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02493/1/001  
**Customer Name:** Ms Catriona Marchant

**Summary of representation:**

Objects to the Martyrs land proposal due to:

The loss of a large area of green belt land.

Increased flood risk in this low area.

Pressure on transport and a lack of public transport.

Too much stress on infrastructure including Schools, doctors and hospitals.

Loss of woodland and wildlife.

**Officer Response:**

The representation regarding flooding, public transport, transport and wider infrastructure and the impact on woodland and biodiversity has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Matters Topic Paper.

Whilst it is noted that the safeguarding of the site to meet future development needs would reduce the amount of Green Belt land in the borough, the overall total of Green Belt land proposed to be released from the Green Belt is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02437/1/001  
**Customer Name:** Ms Barbara Stentiford

**Summary of representation:**

Supportive of the proposal as it would render sites GB12 and GB13 in Pyrford unnecessary for allocation.

The residents of Pyrford village feel very strongly that there should not be substantial growth in the size of the village due to development. As a result of the 2016 referendum, Woking Borough Council are required to give due consideration to the views of the residents of Pyrford in their planning decisions.

The proposed developments near Teggs Lane and Upshot Lane, Pyrford for the building of over 400 properties will destroy large areas of green belt surrounding the village. It is this green belt area that has stopped Pyrford from simply being swallowed up by Woking town, enabling Pyrford to maintain its character as a small, local village.

**Officer Response:**

The Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land and the benefits it brings to the particular communities where the land is situated. Whilst the Council sympathises with this concern, it has ensured through a number of studies that any land that is released from the Green Belt will not undermine its overall purpose and integrity. Taking into account the constraints of the Borough and the available evidence, the proposed allocations are the most sustainable to deliver the objectives of the Core Strategy when compared against other reasonable alternatives. The Sustainability Appraisal Report provides the evidence to support this view. Whilst not underplaying the significance of the benefits of Green Belt land to individual local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.46% of the total area of the Green Belt.

The Green Belt Boundary Review assessed parcels of land against the purposes of the Green Belt, one of which is preventing neighbouring towns from merging into one another, and another purpose is to check the unrestricted sprawl or large built-up areas. The Council do not consider that the potential development of identified parcels around Pyrford would significantly reduce separation between towns or lead to unacceptable urban sprawl.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved.

Overall, the Council is satisfied that the social, environmental and economic character of Pырford will not be significantly undermined.

**Contributor Reference:** 02439/1/001  
**Customer Name:** Mr Cliff J Bolton

**Summary of representation:**

Difficult consultation as all of the sites are in the Green Belt. On balance, supports the proposal to deliver 1024 dwellings at Martyrs Lane excluding the New Zealand Golf Course.

Much of the northern section of the site has been used for non-agricultural purposes. Part of the site was granted planning permission for McLaren Technologies. It is not high value agricultural land.

The land values of the site are lower compared to Pyrford and there is an opportunity to provide some affordable housing for key workers and social housing.

A single site would offer economies of scale to address the infrastructure issues.

The northern part of the site is well served with public transport.

The northern part of the site has easier access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre.

The northern part of the site is close to major local employers.

Part of the northern site is publicly owned land so the sale would help council tax payers.

Fewer Woking residents would be impacted by the development compared to the other six sites, in particular as few people live close to the site.

Much food is now imported and therefore the Pyrford sites should be retained for agricultural purposes.

Pyrford School and West Byfleet Health Centre are at capacity and the Martyrs Lane site could provide new facilities.

There are no plans to improve the infrastructure in West Byfleet which is expected to see a significant amount of development.

The Pyrford and West Byfleet roads are at capacity and dangerous.

Supports the Martyrs Lane proposal.

**Officer Response:**

Support for Martyrs Lane and objection to development in Pyrford is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is also consistent with national planning policy. This has been addressed in greater detail in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 1.0 and 2.0.

Regarding the representation to exclude the New Zealand Golf Course from the site area, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated

as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst it is correct that much of the land is not used for agricultural purposes, the same can be said for the majority of the sites identified for safeguarding in the draft Site Allocations DPD. In addition as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25 as well as the A245 towards the A3.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02440/1/001  
**Customer Name:** Mrs Penny Matthews

**Summary of representation:**

Pyrford Green Belt is prime land and used for agricultural purposes.

The Martyrs Lane site, excluding the New Zealand Golf Course, has in part already had planning permission granted for a technology centre. The site is also partly previously developed land and derelict.

A single site would be more economical and alleviate some of the infrastructure issues such as affordable housing, education and healthcare facilities.

**Officer Response:**

Regarding the representation relating to the agricultural use of the Pyrford sites, it should be noted that as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of whether one site or several sites are safeguarded. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the safeguarding of the Martyrs Lane site for future development needs may not require the Council to identify other sites in the Green Belt for future development, the overriding objective of the consultation is to inform the Council's decision on its preferred safeguarding strategy and ensure that the most sustainable sites are safeguarded when compared with all reasonable alternatives. The merits of the Martyrs Lane site and the reasons against development in Pyrford will weigh in this balance.

**Contributor Reference:** 02442/1/001  
**Customer Name:** Ms Susan Gigg

**Summary of representation:**

Support the Martyrs Lane proposal as it would produce economies of scale to address the infrastructure issues. Developing small sites will overload the existing over capacity local infrastructure.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02445/1/001  
**Customer Name:** Mr Tim R Matthews

**Summary of representation:**

The Martyrs Lane site is appropriate as it is one large site that already has been granted planning permission for development. The site is in part derelict and in need of development.

The required services such as water and other utilities would have easy access to the site beneath the A320. The A320 provides excellent transport links into and out of the town.

Broadband is also conducted along this thoroughfare.

A single site would provide economies of scale and allow for new infrastructure to be built. The six original sites have no expandable potential for services, traffic or IT infrastructure. These sites include large areas of land that are used for agriculture and recreation.

Support for Martyrs Lane and objection to the six original sites.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Whilst the site is not used for agricultural purposes, the same can be said for the majority of the original six sites identified in the draft Site Allocations DPD. In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality

agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be recreational benefits to some or all of the other six sites, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Customer Name:** Ms Clare Benham

**Summary of representation:**

Would prefer no major house building in Woking but accepts that it has to happen.

One large site allows for better infrastructure within the development.

Martyrs Lane has access to the M25 without a major impact on village life and roads, unlike the other six sites which would have a significant effects as the roads are too small for an increase in traffic. The A320 is large and could be widened unlike the existing roads in the villages. It also allows for travel without having to drive through Woking or West Byfleet for the M25. The site is also well placed for Woking Station.

The site is currently disused and has planning permission for McLaren, therefore there is the principle of development. It has less surrounding residents than the other areas and therefore impact fewer people.

**Officer Response:**

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The reasons against development in other areas of the borough have been addressed previously by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02449/1/001  
**Customer Name:** Mr Andrew Malcher

**Summary of representation:**

Repeats an email from Woking Borough Planning Policy Team outlining the purposes of the Land to the east of Martyrs Lane consultation.

Objects to the proposals based on government, Surrey County Council and Woking Borough Council documents. The proposal is badly thought out and contrary to the intent of the published guidelines.

When analysing the public responses, the reasons why the published advice and guidelines were ignored should be set out.

Quotes Paragraph 7 of the NPPF regarding the definition of sustainable development.

The Martyrs Lane site is not sustainable due to the location which has poor accessibility to local services. Existing local infrastructure are only accessible by car and the only public transport connection has been withdrawn.

The existing cycle network is incomplete and dangerous.

The local hospital is at capacity and unable to meet patient waiting guidelines. It does not have the capacity to handle more patients. Development along the A320 will also add to the time to get to St Peters Hospital by road.

Development of this site directly contravenes the stated environmental aims of the NPPF.

The County Council's Infrastructure Study, part 7, shows that there is a shortage of school places, health facilities are at capacity and the road infrastructure is near to or in excess of capacity. It also shows that there is insufficient funds to bring the infrastructure up to standard as there is a funding gap of £3.2billion.

Developers will only provide the essentials needed to deliver a scheme. Large scale development planned by other local Councils will result in gridlock together with economic and social collapse. This is not sustainable. CIL or other development contributions are not large enough to overcome this shortfall.

The GBBR Sensitivity Test Addendum Report to Strategic Transport Assessment is not correct in its estimates as a population of 3000 residents will result in more than 454 car movements in the morning rush hour, given there will be no employment, schools or health centres on the site. The same survey states that the A320, A245 and B385 are already operating at near maximum capacity. The extra traffic from this development will only add to congestion, delays

and pollution. The traffic model does not take into account the development proposals of Fair Oaks or Longcross. It should be discredited as a tool.

The SHMA (2015) identifies housing need. Developers will only concentrate on market housing for 3 bedroom and above units in greenfield locations to maximise profits. Smaller/affordable housing is needed to meet housing needs and bring back some mobility into the broken housing market.

Affordable housing is CIL exempt so there will be a further infrastructure gap. Developers have promised to build affordable homes in Woking before and have back tracked on this and not held to account.

The principle of Green Belt is to prevent urban sprawl and give the local population access to fresh air and outdoor leisure activities. The government pledged to protect the Green Belt. With current levels of traffic, pollution, stress and obesity, the need for Green Belt is stronger than ever. None of it should be sacrificed for short term economic gain. It is hypocrisy by the Council to promote the benefits of Green Belt to business and future residents whilst engineering its destruction.

Of the many smaller locations identified and discussed in the Core Strategy (Policy CS6), there is no mention of Martyrs Lane.

The review of the Green Belt is supposed to retain areas of defensible Green Belt to provide permanent gaps between urban developments in the future. Development of this site is contrary to this purpose as the only defensible boundary is the River Bourne and its flood plain. The borough boundary is not defensible as the adjoining borough is likely to adopt the same approach within their borough. This will result in an urban continuum from Chertsey, Addlestone and Ottershaw to Woking.

In summary the proposals do not provide the type of housing required for the younger generation in the local area, let alone for new residents or the desire for economic growth. The proposed developments are not sustainable and will simply add pressure, pollution and congestion to the area. The infrastructure is already close to breakdown, with no funding available to fix it. No further incursion should be allowed on Green Belt land, since it is vital for the health and welfare of the population of London and the Home Counties and of strategic importance to the long term survival of the ecosystem of this planet.

#### **Officer Response:**

Objection to the Martyrs Lane site and the original proposals are noted.

Regarding the representation highlighting the inaccessible location of the Martyrs Lane site, this issue has been noted by Officers within the Sustainability Appraisal (SA) for the Martyrs Lane site. Specifically the SA states that 'The site has limited accessibility to existing services and facilities due to its somewhat isolated location, and due to the canal acting as a barrier to

the urban area to the south. It is beyond reasonable walking distance to key services and facilities in any local centres. The need to travel to access existing services and facilities would be increased, although sustainable modes of travel by bus and bicycle are possible. A neutral score (for this sustainability objective) has been given because although access to existing services and facilities is limited, with development of this scale there is an opportunity to provide new local community services and facilities in the medium–long term. Access by bus and bicycle to the Town Centre is also good, and any development proposals at this site can help improve these access modes'. This matter will weigh in the balance of considerations by Members.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments and set out in the Sustainability Appraisal, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

A key thrust of the transport policies of the Core Strategy and the NPPF are to influence a shift from car based travel to sustainable travel modes such as public transport, walking and cycling. Policies CS1: A spatial strategy for Woking Borough and CS18: Transport and accessibility of the Core Strategy clearly demonstrate the importance that the Council places on encouraging walking and cycling. These policies have been scrutinised at Examination and judged to be in conformity with the NPPF.

In addition to the policies of the Core Strategy, a key objective of the Council's Parking Standards SPD is to use parking provision as a tool to encourage walking and cycling, in particular, at locations where key services and facilities are readily available without undermining economic vitality. Policy CS18 of the Core Strategy makes this point very clear.

Woking was designated as a Cycle Demonstration Town in 2009 and received a significant amount of money (about £1.8M) to improve cycle infrastructure. The investment of this amount and other funding has had positive outcomes in the borough. For example, it has resulted in significant overall increase in cycle journeys across the borough. Whilst the Local Sustainable Transport Funding from government has ended, the Council continues to be committed to improving cycle infrastructure and this is reflected in the Regulation 123 list of projects to benefit from CIL contributions. The Council is currently investing about £24M to improve transport infrastructure at the Town Centre, including improvement to the bus/rail

interchange near the Station to enhance public transport connectivity. Part of this funding is from the Local Enterprise Partnership.

It should also be noted that the existing cycle network is a matter that would be considered in detail at the Development Management stage. If detailed transport assessments indicated that additional cycling improvements were required to make the development acceptable, then this would be secured through the Development Management process.

Regardless of whether the Council decides to safeguard the Martyrs Lane site or the original six safeguarded sites, it is committed to working with the local Clinical Commissioning Groups (CCGs) in identifying future healthcare requirements based on increased population growth and its dispersal across the borough. It should also be noted that St Peters Hospital is currently consulting on proposals to redevelop the site; these proposals also include additional hospital facilities.

The Green Belt Boundary Review Sensitivity Test Addendum Report to Strategic Transport Assessment calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. In particular on the A320 and A245 corridors. In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The 454 car movements quoted in the representation highlight the 'Vehicle Arrival Trips' to the Martyrs Lane site if the site was developed for 3000 dwellings (Scenario H). It should also be noted however that the same scenario is expected to result in 1,570 'Vehicle Departure Trips' in the weekday AM peak hour, resulting in a total of 2,024 vehicle trips during the weekday AM peak hour. The Council is satisfied that the Green Belt Boundary Review Sensitivity Test Addendum Report to the Strategic Transport Assessment provides robust evidence to enable the Council to make informed decisions on its preferred safeguarding option. It should also be noted that the Martyrs Lane consultation is based on the site delivering at least 1200 dwellings, and not 3000 dwellings as was tested in the transport assessment.

The transport studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council is also aware of the potential developments at Longcross in Runnymede and Fairoaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

Regarding wider infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website which is also currently being updated.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Although CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site, it has always been very clear to the Council that infrastructure funding has never been and cannot be met entirely by developer contributions. Public sector contributions have and will always be a significant part of infrastructure funding, and the Council works tirelessly with relevant agencies to secure public sector and other sources of funding for infrastructure projects. For example, the CIL Charging Schedule identifies the priority infrastructure to support the delivery of the Core Strategy, how much it will cost, how much of the funding will met from developer contributions and how much is expected to be secured from public sector sources. This gives an indication of the scale of public sector funding expected to help deliver the identified infrastructure.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

Reference to the Strategic Housing Market Assessment (SHMA) (2015) is noted. The previous SHMA was the basis of the Core Strategy, in particular the housing policies of CS10: Housing provision and distribution, CS11: Housing mix, CS12: Affordable housing and CS13: Older people and vulnerable groups. As clearly set out in Policy CS11, all residential proposals will be expected to provide a mix of dwelling types and sizes to address the nature of local needs as evidenced in the SHMA in order to create sustainable and balanced communities. This policy requirement will be considered at the Development Management stage regardless of whether the site is in the urban area or Green Belt.

The Council would also draw the representor's attention to the draft Site Allocations DPD. Many of the sites identified for allocation fall within the existing urban area on previously developed land. In the town centre in particular, supported by Core Strategy Policy CS1, a significant number of the sites are allocated for high density residential development which is likely to comprise of non-family accommodation, namely 1 and 2 bedroom flats. It is therefore incorrect to suggest that overall development in the borough will be 3 or more bedroom greenfield developments.

In addition to the above, Core Strategy Policy CS12: Affordable housing as well as the Affordable Housing Delivery SPD set out the Council's affordable housing requirements for new development. As set out in CS12, the Council will expect a higher proportion of affordable

housing on green field sites due to the lower cost of developing these sites compared to previously developed sites in the urban area. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability.

As set out in paragraphs 173 and 174 of the NPPF as well as the Core Strategy and Affordable Housing Delivery SPD, sustainable development should take account of development viability. Where onsite affordable housing on a proposed development scheme is not economically viable, the Council will expect the submission of financial appraisal information to demonstrate this. This is then subject to scrutiny by an independent expert at the development management stage. The Council therefore does not agree that developers are not held to account regarding the lack of affordable housing on development proposals.

Whilst it is correct that one of the five purposes of Green Belt is to check the unrestricted sprawl of large built-up areas, it is not a purpose of Green Belt to provide the local population with access to fresh air or outdoor leisure activities. This is confirmed in paragraph 80 of the NPPF. Whilst the Green Belt can provide people with opportunities to access the natural environment as well as sports and recreation facilities, they do not fall within the defined purposes of the Green Belt.

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case to release Green Belt land for development, and safeguard land for future development needs, has already been established in the Core Strategy which was found sound by an Inspector appointed by the Secretary of State.

Whilst the Council notes that the Green Belt provides residents with a number of benefits, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that the Core Strategy does not make reference to the Martyrs Lane site. The Core Strategy sets out 25 strategic policies for the borough and does not allocate specific sites for development. This is the purpose of the Site Allocations DPD which the Council is currently preparing.

The Landscape Assessment and Green Belt Review for land to the east of Martyrs Lane by Hankinson Duckett Associates specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report (Green Belt Boundary Review). The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

As set out above the Council is also working with neighbouring authorities to take into account development proposals and plan preparation in neighbouring boroughs.

The environmental implications of the proposals will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The reasons against development at Martyrs Lane as set out in the representation are noted and after balancing all the relevant issues, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Customer Name:** Mr And Mrs John And Eliene Fotheringham

### **Summary of representation:**

Martyrs Lane will have the least impact on Woking. It is a single site, been previously developed, partially derelict and less than half of the site is needed.

Pyrford Green Belt is virgin Green Belt, used for agriculture and used for recreational purposes. It is also fundamental to the semi-rural character of the village and escarpment. The sites also have views to the south.

Martyrs Lane has no landscape element, no known footpaths and the public seem not to use it. The site was granted planning permission for the McLaren Technology Centre in 2012. The Officer report noted that there is no risk of merger or sprawl. The land also contains former army buildings and a disused sports field. The Surrey County Council waste site is derelict and been offered to Woking Borough Council for sale and Green Belt release for several years. The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required. Includes hyperlink to density table on external website.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

## Officer Response:

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Regarding the representation stating that only some of the site will be required for development, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Parcels of land within the Martyrs Lane site that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding the representation on economies of scale to resolve infrastructure issues, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.
