It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the

determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The representation regarding reasons against development in Mayford have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular, the representation relating to wildlife, environmental constraints, traffic and congestion. Regarding the representation on air pollution, the environmental implications of development at any of the allocated sites will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

**Customer Name:** Mr Alan Grant

**Summary of representation:**

Supports the Martyrs Lane proposal and that the Pyrford sites should be protected.

One larger site of 1024 dwellings would provide economies of scale, making it easier and cheaper to resolve infrastructure provision when compared against six sites spread across the borough.

Fewer residents would be impacted by traffic disruption.

Land values of northern sites are much less than the 6 original sites suggested and this facilitate the provision of Affordable Housing. Housing in Pyrford is expensive and more executive homes will not provide key worker dwellings needed.

There are three large employers close by the Martyrs Lane site. St Peters Hospital needs affordable housing for its workers and there is a bus that connects the hospital to the site.

Current plans for development in West Byfleet means that the Pyrford/West Byfleet area has more than enough development taking place already.

Surrey County Council studies show that 900 dwellings at Martyrs Lane will have less impact on traffic conditions than the development proposals in Mayford or the combination of developments proposed for Byfleet and Pyrford. Martyrs Lane would alleviate congestion in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main road links to Woking, Chertsey and the M25. Roads in Byfleet and Pyrford are only B or C roads. The traffic flow on the A245 through West Byfleet is at capacity.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

West Byfleet Health Centre and Pyrford school are at capacity and the Martyrs Lane site offers the opportunity to develop new facilities.

Martyr's lane already has better bus services than other sites.

Please vote in favour of the Martyrs Lane site.

## Officer Response:

Support for the Martyrs Lane site for future development needs and objection to development in Pyrford is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst it is agreed that the site is of a significant size, it should be noted that as part of the consultation exercise, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Customer Name:** National Grid

**Summary of representation:**

National Grid has appointed Amec Foster Wheeler to review and respond to development plan consultations on its behalf.

We have reviewed the above consultation document and can confirm that National Grid has no comments to make in response to this consultation.

National Grid is happy to provide advice and guidance to the Council concerning our networks. If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us.

National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect our assets. Please remember to consult National Grid on any Development Plan Document (DPD) or site-specific proposals that could affect our infrastructure.

**Officer Response:**

The Council notes that National Grid has no comments to make in response to this consultation.

As set out in the Council's Statement of Community Involvement, the Council will consult with the relevant infrastructure providers, including National Grid, during both the plan making and development management processes. The Council welcomes the opportunity to engage with National Grid as part of the Site Allocations DPD process in the future.

**Contributor Reference:** 02126/1/001  
**Customer Name:** Mr Gerald Griffiths

**Summary of representation:**

Given the shortage of supply of new homes the Council's responsibility to meet long term housing needs, it is a good thing that the Martyrs Lane site has been identified for residential development.

The scale of development provides a golden opportunity to produce a development along the lines of a Garden Village complete with infrastructure including education and healthcare provision, pubs and a village hall.

The site is located between Woking Town Centre and the M25 and have good access to the A320 and A245. The widening of the A320 through Ottershaw will be required to cope with the increased traffic from the Fair Oaks proposal.

If developed with a vision and sensitivity, it would allow young people to get on the housing ladder by means of affordable housing. Please do not entertain the idea of high rise and high density development at this site. This will only increase pressure on the overload borough infrastructure.

There are technical matters relating to the consultation that are of concern. The Green Belt boundary review, prepared by Peter Brett Associates, was used for the Regulation 18 consultation. The review did not recommend the Martyrs Lane site for development. This raises the question why it did not and why only now has the Martyrs Lane site come up for consultation. Was the review flawed for not promoting the site or was the brief for the report limited to play down the promotion of the site.

Secondly the consultation document refers to 'safeguarded sites' and the substitution of the Martyrs Lane site for these safeguarded sites. Not aware that there are safeguarded sites as no formal process has taken place. As of today, the draft Site Allocations is only based on the Green Belt boundary review. Questions why the Council has attributed a status to land recommended for development in the Green Belt boundary review which that land does not have.

Recommends that when the results of the Martyrs Lane consultation are published, that the Council clarifies that the reference to safeguarded land was a mistake and that the draft Site Allocations DPD will be amended accordingly.

**Officer Response:**

Support for the Martyrs Lane site to meet future development needs is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Although the site area is of a significant size, as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation referring to the principles of Garden Villages is noted. At this stage of the Site Allocations DPD process the Council is in the process of informing its decision on its preferred safeguarding option. The merits of the site as a Garden Village as set out in the representation will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council is aware of the potential developments at Fair Oaks in Surrey Heath as well as Longcross in Runnymede, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's viability assessments residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has clear policies in place to ensure that future development is of a high standard and reflects local character. In addition, Core Strategy Policy CS1 and CS2 state that Woking Town Centre may be suitable for tall buildings and high density development. This is based on the sustainable location of the town centre. Policy CS10: Housing provision and distribution states that in the Green Belt, an indicative housing density range of 30 to 50 dwellings per hectare would be suitable. This policy would apply to either the Martyrs Lane site or any of the original sites identified in the draft Site Allocations DPD. The exact density and scale of development will be considered in greater detail at the development management stage.

It is correct that the Green Belt boundary review did not recommend the land to the east of Martyrs Lane for development. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. In addition to the Green Belt boundary review the Council has comprehensively assessed parcels of land within the Martyrs Lane site as part of the Sustainability Appraisal work it has undertaken. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the Green Belt boundary review is flawed.

The Council is satisfied that the brief for the Green Belt boundary review was not limited, as suggested in the representation. The review has provided the Council with a robust evidence base to inform its emerging Site Allocations DPD. In addition, the Council has also undertaken a comprehensive Sustainability Assessment which has assessed about 125 sites across the Borough. This matter has been addressed in further detail in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Sections 8.0, 9.0 and 10.0.

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

- GB4: Land south of High Road, Byfleet
- GB5: Land to the south of Murray's Lane, Byfleet
- GB9: Woking Garden Centre, Egley Road, Mayford
- GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford
- GB11: Land to the north west of Saunders Lane, Mayford
- GB12: Land rear of 79–95 Lovelace Drive, Teggs Lane, Pyrford
- GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite

not being an adopted Council document, it does form part of the Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

It should be noted that the Regulation 18 version of the Site Allocations DPD is based on a wide range of evidence base documents and not entirely on the Green Belt boundary review prepared by Peter Brett Associates. As set out in Section 8.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council has used a number of evidence base documents to inform the Site Allocations DPD. Since the publication of the draft Site Allocations DPD, the Council has also published a number of other evidence base documents including additional transport and landscape studies. Further details can be found on the Council's website as well as within the Land to the east of Martyrs Lane Consultation Document.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will be considered during the review of the Core Strategy and/or Site Allocation DPD. At this particular stage, the Council is only seeking to identify specific sites for safeguarding that are capable of delivering the borough's future development needs.

**Customer Name:** Mr Roger Pashley

**Summary of representation:**

Objects to the proposal.

The land should remain as Green Belt as it acts as a buffer between the urban sprawl or Woking and the village of Ottershaw.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 02171/1/001  
**Customer Name:** Mr Colin Parnell

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

**Officer Response:**

Support noted

**Contributor Reference:** 02137/1/001  
**Customer Name:** Lesley Masters

**Summary of representation:**

Writing to state views on the proposed development of the fields in Pyrford. Have lived in Pyrford for a number of years and seen many changes and the development of houses.

Pyrford has grown extensively. Local schools are being expanded, whilst healthcare facilities can not cope with demand. The roads are congested as well as those in West Byfleet.

There will be very little open green space left for the community comprising a rising elderly population and young growing families. There is no space to accommodate further schools, shops and medical facilities. Additional development will put further strain on these services.

Martyrs Lane makes more sense as there is more land for housing with better access to main roads. There is also space for infrastructure such as education and healthcare facilities.

Pyrford can not sustain families comfortably and the reasons above set out why Martyrs Lane is the better option.

**Officer Response:**

The reasons for not developing the two sites in Pyrford, as set out in the representation, have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. This includes the representation on traffic and congestion, infrastructure provision and the loss of open space.

Support for the Martyrs Lane site is noted.

Whilst it is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes, cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary

infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Summary of representation:**

Strong views that Martyrs Lane is the best option when compared against the other alternatives. Pyrford is inappropriate for development based on the following reasons.

The Pyrford sites have been farmed for centuries and are in keeping with the rural character of the area. This is highlighted in the Pyrford Neighbourhood Plan. Pyrford sites are a contributing asset used for agriculture whereas the Martyrs Lane site has no current use at all.

Understands that the site was granted planning permission for a factory, which was revoked at the request of the applicant. The case officer considered the impact on the Green Belt and assessed that building at a large scale on the site presented no risk of merger and sprawl.

The northern part of the site can deliver 1024 homes as required by the Regulation 18 Site Allocations DPD. The housing numbers being used by the No Woodham New Town Group is completely without foundation.

There is enough land to the north of the New Zealand Golf Course for it to be retained.

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford.

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. Concludes that the Brett Report supports the suitability of Martyrs Lane for development on all counts.

The Martyrs Lane site is previously developed land.

The site would offer economies of scale making it easier to deal with infrastructure provision. The site can deliver affordable housing, whilst Pyrford is expensive and executive housing will not benefit those employed by St Peters Hospital. A bus connects the site to the hospital.

Surrey County Council reports state that the Martyrs Lane development will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet and Pyrford. Martyrs Lane would clearly alleviate the inevitable congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking. Martyrs Lane has better road links to Woking, Chertsey and the M25.

Pyrford and Byfleet are only accessible by B or C Roads.

A new school could be built on the site.

The site benefits from bus services.

Pyrford Green Belt is used for recreation purposes. Martyrs Lane is not easily accessible and rarely used by the public.

The Pyrford fields are surrounded by heritage assets and are integral to the heritage setting of the area.

Martyrs Lane has limited footpaths and no known heritage value.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the 6 original sites.

**Officer Response:**

Support for the Martyrs Lane site and objection to the safeguarding of land in Pyrford for future development needs is noted.

The reasons against development in Pyrford have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular, the representations relating to heritage, landscape, amenity and well being and infrastructure.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1024 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

Whilst it is correct that the Martyrs Lane site is of a significant size, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all

assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);

- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Summary of representation:**

Strong views that Martyrs Lane is the best option when compared against the other alternatives. Pyrford is inappropriate for development based on the following reasons.

The Pyrford sites have been farmed for centuries and are in keeping with the rural character of the area. This is highlighted in the Pyrford Neighbourhood Plan. Pyrford sites are a contributing asset used for agriculture whereas the Martyrs Lane site has no current use at all.

Understands that the site was granted planning permission for a factory, which was revoked at the request of the applicant. The case officer considered the impact on the Green Belt and assessed that building at a large scale on the site presented no risk of merger and sprawl.

The northern part of the site can deliver 1024 homes as required by the Regulation 18 Site Allocations DPD. The housing numbers being used by the No Woodham New Town Group is completely without foundation.

There is enough land to the north of the New Zealand Golf Course for it to be retained.

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford.

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. Concludes that the Brett Report supports the suitability of Martyrs Lane for development on all counts.

The Martyrs Lane site is previously developed land.

The site would offer economies of scale making it easier to deal with infrastructure provision. The site can deliver affordable housing, whilst Pyrford is expensive and executive housing will not benefit those employed by St Peters Hospital. A bus connects the site to the hospital.

Surrey County Council reports state that the Martyrs Lane development will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet and Pyrford. Martyrs Lane would clearly alleviate the inevitable congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking. Martyrs Lane has better road links to Woking, Chertsey and the M25.

Pyrford and Byfleet are only accessible by B or C Roads.

A new school could be built on the site.

The site benefits from bus services.

Pyrford Green Belt is used for recreation purposes and is rich in wildlife. Martyrs Lane is not easily accessible and rarely used by the public.

The Pyrford fields are surrounded by heritage assets and are integral to the heritage setting of the area.

Martyrs Lane has limited footpaths and no known heritage value. No point living in a Conservation Area if the land to the rear of their house is a modern housing estate.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the 6 original sites.

**Officer Response:**

Support for the Martyrs Lane site and objection to the safeguarding of land in Pyrford for future development needs is noted.

The reasons against development in Pyrford have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular, the representations relating to heritage, wildlife, landscape, amenity and well being and infrastructure.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1024 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

Whilst it is correct that the Martyrs Lane site is of a significant size, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all

assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02143/1/001  
**Customer Name:** Ms Erika Vincent

**Summary of representation:**

Support for the Martyrs Lane proposal.

The site is large enough to accommodate 1200 houses with supporting infrastructure. There are already major employers close by and new facilities on site would create new employment opportunities.

The site is close to the A320 and offers each access to the M25, airports and Woking town centre. There are existing bus, cycle and foot routes. It is also close to the centre of Byfleet with its own station and amenities. Alternative sites have poor access to the A320 which is already at capacity.

The A320 to the north of Woking can and should be widened.

Although Green Belt, the site is derelict and permission granted for a factory. The land is suitable for development.

Other areas of south Woking can retain their Green Belt and maintain the gap between Woking and Guildford.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County

Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites. The site is not within reasonable walking or cycling distance of Byfleet Station or Byfleet Local Centre, as suggested in the representation.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The representation regarding maintaining the gap between Woking and Guildford has been addressed by the Council in the Regulation 18 Issues and Matters Topic Paper.

**Contributor Reference:** 02152/1/001  
**Customer Name:** Mr William Hartley

**Summary of representation:**

More homes are needed across the country and house prices are too high.

People against the development must be selfish not to allow new houses being built.

The downside of the proposal would be the increase in traffic but the funds raised through extra Council tax could be used towards road improvements in the area.

**Officer Response:**

Support for the Martyrs Lane site is noted by the Council.

As set out in the Core Strategy, affordability or the ability for people to get on the property ladder is a key issue. The Council is therefore fully committed to the comprehensive delivery of the Core Strategy which aims to facilitate the delivery of 4964 dwellings over the Plan Period as well as safeguard land for future development needs.

Whilst it is acknowledged that the site could deliver a significant number of new homes, cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02163/1/001  
**Customer Name:** Ms Judith Oakley

**Summary of representation:**

It is established planning policy that alteration of the Green Belt should only be undertaken in exceptional circumstances. Understands that if Woking is required to offer possible sites then Martyrs Lane has distinct locational advantages.

There are major employers nearby as well as Woking Town Centre.

It has access to the A320 to the M25, airports as well as Woking and West Byfleet railway stations. Access to the M25 without driving through Woking is of real significance.

It has no landscape importance and surrounded by trees and planting to the site edges. It is an uninteresting piece of land with clear boundaries and is well suited to a contained development.

It is a large enough site to produce a well thought out community with good infrastructure and clear boundaries. Smaller sites produce little housing estates putting a real burden on the existing infrastructure.

Martyrs Lane site provides a real opportunity to develop a vibrant new community and is a better solution than the original six sites.

**Officer Response:**

It is correct that the Council is required to fully justify its decision to release Green Belt land for development as part of the plan making process. As set out in the Regulation 18 consultation Issues and Matters Topic Paper, in the opinion of the Council the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national planning policy.

The overall purpose of the Site Allocations DPD is to identify specific sites that will facilitate the comprehensive delivery of the Core Strategy. The representations received from the land to the east of Martyrs Lane consultation will be used to inform the Council's preferred safeguarding option.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor between Woking and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Council's Landscape Assessment and Green Belt Review specifically assessed the landscape and Green Belt of the Martyrs Lane site. It agreed that the site is surrounded by trees and planting and has well contained boundaries. Nevertheless the overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not simply whether the site has well contained boundaries. This will however be one of many material considerations that will be carefully considered by the Council in making its decision.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic

employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Customer Name:** Ms Wendy Aldons

**Summary of representation:**

Supports the proposal.

Developing the original small areas would overload services. The school and leisure centre at Egley Road are more than enough to burden Mayford.

The Martyrs Lane site is larger, with better access to main roads, motorways, the airport, stations, Woking Town, hospitals.

It would accommodate the infrastructure and facilities to support housing such as primary schools, health centre, local shops etc.

There are major employers nearby.

**Officer Response:**

Support is noted.

The Regulation 18 consultation Issues and Matters Topic Paper addresses in detail the issues set out in the representation associated with the original six sites.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of the required new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Accessibility as described in the representation is acknowledged. However, there may be traffic impacts associated with a development of this scale, which may impact on accessibility.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The merits set out in the representation regarding infrastructure are noted, and will weigh in the balance of considerations by Members. The Council will, however, make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. Whilst the Council recognises that local residents are concerned about overstressing local facilities, the Council continues to work with infrastructure providers to ensure that existing capacity is available to accommodate new development, or that new infrastructure is provided if necessary.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02194/1/001

**Customer Name:** Mark Busby

**Summary of representation:**

Support the Martyrs Lane proposal.

The site is large enough to accommodate 1200 homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus and cycle routes already exist. There is little development along the A320 so road widening if needed would be easy. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site has no national or local landscape designation unlike the other sites.

Most of the site is within Flood Zone 1 and will make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing and specialist residential accommodation, something that the Council is currently under providing.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking. The site is in a sustainable location, close to services and facilities. It would comply with the requirements of CS14. Ten Acre Farm can therefore be removed from the Site Allocations DPD for traveller accommodation.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Summary of representation:**

Summary of representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02206/1/001  
**Customer Name:** Ms Emily Gale

**Summary of representation:**

Supports the proposal, in favour of developing fields in Pyrford.

The fields play a critical role in protecting the Green Belt.

There would be increased road traffic, and would place strain on schools, trains and health services.

It would harm the heritage landscape in the area.

The rural character of the area enjoyed from rights of way will be greatly harmed.

**Officer Response:**

Support for the proposal is noted.

The Regulation 18 Consultation Issues and Matters Topic Paper addresses the issues raised in detail, including the implications of developing the originally proposed sites in terms of impact on the Green Belt (Section 2 and 10); on infrastructure (Section 3); on transport infrastructure (Section 20); and on landscape and character (Section 7, 19 and 23).

**Contributor Reference:** 02227/1/001  
**Customer Name:** Mr Stephen Carlile

**Summary of representation:**

Objects to the proposal.

- Loss of Green Belt land, leading to urban sprawl – particularly with Fair Oaks proposal;
- Increased flood risk due to increased urban surface area and loss of trees;
- Pressure on existing roads, particularly A320;
- Lack of public transport;
- Stress on existing infrastructure and no plans for new infrastructure;
- Severe loss of wildlife;
- Loss of trees and woodland;
- Under the flight path;
- Recycling centre located in the middle of the site.

**Officer Response:**

Objection is noted.

All of the issues raised are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02258/2/001  
**Customer Name:** Ms Hannah O'Reilly

**Summary of representation:**

Objects to the proposal:

- Loss of Green Belt land
- Loss of woodland and habitat for wildlife
- Further pressure on transport network
- Stress upon existing infrastructure with no evidence to plan for more schools or hospitals

**Officer Response:**

Objection is noted.

All of the issues raised are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02266/1/001  
**Customer Name:** Garrett O'Reilly

**Summary of representation:**

Objects to the proposal:

- Loss of Green Belt land
- Loss of woodland and habitat for wildlife
- Further pressure on busy transport network
- Lack of public transport to support a growing community
- Stress upon existing infrastructure with no evidence to plan for more schools or hospitals
- Recycling plant sits in the centre of the proposed development

**Officer Response:**

Objection is noted.

All of the issues raised are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Summary of representation:**

Support the Martyrs Lane proposal in favour of Mayford sites.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

The site is large enough to accommodate 1200 homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. There is little development along the A320 so road widening if needed would be easy.

The site has no national or local landscape designation unlike the other sites.

Most of the site is within Flood Zone 1 and will make the planning and development process simpler and more cost effective.

Master planning of the total residential development would allow for the provision of Affordable Housing and specialist residential accommodation, something that the Council is currently under providing.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking. The site is in a sustainable location, close to services and facilities. It would comply with the requirements of CS14. Ten Acre Farm can therefore be removed from the Site Allocations DPD for traveller accommodation.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar

amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. **Summary of representation:**

Support the Martyrs Lane proposal.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus and cycle routes already exist. There is little development along the A320 so road widening if needed would be easy. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site is large enough to accommodate plenty of homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

The site has no national or local landscape designation unlike the other sites.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also

confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

**Customer Name:** Mr And Mrs Peter And Elizabeth Gardner

**Summary of representation:**

Supports the proposal in favour of safeguarding sites in Pyrford.

The fields are a vital aspect of the local countryside – a view supported by Inspectors in previous planning enquiries.

Building on them would be a blot on the landscape, and would put severe stress on local infrastructure.

The development would be visible for miles as it would be on top of the escarpment.

**Officer Response:**

Support is noted.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. The Green Belt review methodology took into account landscape constraints and sensitivity to change. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It should be noted that any development coming forward in the future would need to meet a series of key requirements, including those on design which require development to make a positive contribution to the character of the area in which they are situated, and incorporating landscape to enhance the setting of development. Officers are satisfied that the recommendations of the Green Belt review are sound, and that parts of the Pyrford sites could be developed without compromising the integrity of the local landscape designations.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Regulation 18 Consultation Issues and Matters Topic Paper addresses some of the issues raised in the representation in detail, including infrastructure provision (Section 3 and M), and impact on landscape and character (Sections 7 and 23).

**Summary of representation:**

Support the Martyrs Lane proposal.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus and cycle routes already exist. There is little development along the A320 so road widening if needed would be easy. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site is large enough to accommodate plenty of homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

The site has no national or local landscape designation unlike the other sites.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also

confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 02268/1/001  
**Customer Name:** Mr And Mrs Len And Kristen Louis

**Summary of representation:**

Support the proposal.

The site is situated within ordinary landscape, well-contained with trees. Can avoid negatively impacting the landscape.

Good proximity to local services, amenities, employment and motorway links, making it ideal for local employment, sustainable traffic flow, access and accessibility. It represents an efficient and sensible use of land.

Development will result in an increase in land values. Profits should be re-invested into the new community and surrounding area for the benefit of the people of Woking.

Better to release a single, large site from the Green Belt rather than several smaller, scattered bolt-on sites, which would result in housing estates rather than sustainable communities, putting pressure on existing communities. Larger site allows for better infrastructure investment and planning of a distinctive place.

The very act of seeking to safeguard land to the east of Martyrs Lane, and "replacing" (as contended by Woking Borough Council) sites proposed for safeguarding in the unsound draft Site Allocations DPD published in 2015, has obvious and relevant direct impacts on other sites proposed for removal from the Green Belt prior to 2027. In addition, there are no "safeguarded sites," as alleged by the Consultation Statement in Paragraphs 1.10 and 1.11. There is no up to date adopted planning policy, guidance or statement that safeguards the sites referred to for removal from the Green Belt, or that identifies the sites for removal from the Green Belt prior to 2027. The Consultation Paper makes assertions that are simply wrong.

The Council has a statutory duty to demonstrate that its approach to the Green Belt review reflects the great importance to the Green Belt as described in the NPPF. The Council should address and amend the flawed approach set out in the Consultation Paper.

**Officer Response:**

Support is noted. The merits of the proposal as put forward in the representation will weigh in the balance of considerations by Members.

The references to impacts on landscape are noted. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and

- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

The Peter Brett report makes its recommendations on safeguarding the originally proposed sites after acknowledging the references made in the representation, and taking into account potential impacts on landscape character. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers, and that there would be an opportunity for residents to live near their jobs, using sustainable means of transport. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

In terms of traffic flow and accessibility:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts, as suggested in the representation. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of investing in infrastructure for the benefit of all:

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Officers are confident that the design planning policies of the Development Plan will lead to the delivery of high quality, sustainable communities be it on a single site or on multiple sites. The detailed masterplanning of the sites would take place at the Development Management stage.

With regards to the wording of the Consultation Paper:

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79-95 Lovelace Drive, Teggs Lane, Pyrford

### GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

It should be noted that the Regulation 18 version of the Site Allocations DPD is based on a wide range of evidence base documents and not entirely on the Green Belt boundary review prepared by Peter Brett Associates. As set out in Section 8.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council has used a number of evidence base documents to inform the Site Allocations DPD. Since the publication of the draft Site Allocations DPD, the Council has also published a number of other evidence base documents including additional transport and landscape studies. Further details can be found on the Council's website as well as within the Land to the east of Martyrs Lane Consultation Document.

**Contributor Reference:** 02251/1/001  
**Customer Name:** Mr Justin Quintal

**Summary of representation:**

Supports the proposal.

Pyrford roads cannot accommodate further traffic, even if widened. The infrastructure in terms of not only roads but alternative routes and drainage is of concern.

Pyrford's unique, semi-rural setting is largely unspoilt with open views south. The escarpment is a key constraint. Fields have been farmed for centuries. A distinctive area, as highlighted in the Neighbourhood Plan.

North of the golf course the land is largely disused and derelict, with no landscape element, no known footpaths and limited public use.

The Martyrs Lane site should be selected before the fields in Pyrford as performs better against criteria in Green Belt review.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues – water, waste, electricity.

Fewer residents would experience traffic disruption from a single site.

Traffic studies show congestion likely to be alleviated in West Byfleet. The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

Pyrford Primary School is full. The Martyrs Lane site presents opportunities for a new school.

There are clear benefits to developing the Martyrs Lane site – most viable, effective and economic option.

**Officer Response:**

Support is noted and the merits as set out in the representations will weigh in the balance of considerations by Members.

In terms of traffic impacts:

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. The Transport Assessment also identified the A245 (Parvis Road) as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

Regarding landscape:

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The report takes landscape features such as the escarpment into account.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are

classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

In terms of infrastructure provision, a number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites. The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council is proactively working with infrastructure service providers, such as Surrey County Council as education and transport authority, to ensure that there is sufficient capacity in existing infrastructure, or alternative, new infrastructure can be provided, to support future growth in the Borough.

**Contributor Reference:** 02263/1/001  
**Customer Name:** Mr Paul Allard

**Summary of representation:**

Supports the proposal.

The sites around Saunders Lane are served by roads unsuitable for an increase in traffic, with a lack of footpaths, which encourage motorised transport to the limited local amenities. Single lane bridges already slow traffic immensely. The additional traffic resulting from these plans will cause severe back logs at these key points.

The Martyrs Lane site is close to major traffic routes that can accommodate more traffic, which were purpose-built for a larger volume of motorised transport than those around Saunders Lane.

The loss of green spaces between Mayford and Woking will turn Mayford into a suburb of Woking, increasing the risk of merging with Guildford. A significant purpose of the Green Belt. There has been no consideration for preserving Mayford as a separate settlement to Woking, nor the impact on the character of the village.

The Martyrs Lane site would not result in the same degree of merging of settlements as a significant amount of green space will remain between this settlement and its neighbours.

**Officer Response:**

Supports the proposal, particularly in favour of development around Saunders Lane.

The Regulation 18 Consultation Issues and Matters Topic Paper addresses some of the issues raised in detail, including traffic and landscape character impacts at Sections 3, 7, 20, 23, U and V.

Section 12 addresses concerns over separation of settlements (referring specifically to Mayford and Guildford), and Section 15 on urban sprawl.

Section E addresses concerns about lack of pavements and potential for increase in car travel.

Regarding the representation on impacts of development at Martyrs Lane on the integrity of the Green Belt:

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land

has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

Regarding the traffic impacts of development at Martyrs Lane:

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Contributor Reference:** 02134/1/001  
**Customer Name:** Ms Meredith Hopkins

**Summary of representation:**

Objects to the proposal.

Surprised that the draft Site Allocations DPD is being challenged and that land to the east of Martyrs Lane is now being proposed for a disproportionately large development on an area which lacks any infrastructure for its support.

**Road Network:**

The A245 and A320 are at maximum capacity. Further traffic will lead to gridlock.  
The Six Crossroads Roundabout is at capacity and needs to be reconfigured for safety with the current levels of traffic.  
The soil formation under the A320 is subject to sinkholes.  
Delays on the A320 have implications for the speedy and safe transport passage of patients to St Peter's Hospital.  
Development at Martyr's Lane would add to the increased traffic issues from the proposed Longcross and Fair Oaks developments in other boroughs.  
The Martyr's Lane Junction with the A246 has already been subject to a Traffic Regulation Order (2012).

**Loss of Amenity:**

Urban Sprawl would significantly change the area, with no significant SANG provision. There will be a complete alteration of character.  
Pollution levels from increased traffic would be intolerable.  
Cycle ways would become unsafe.  
The SPA would need to be replaced – Horsell Common Preservation Society estimates that 135 acres of open land would need to be identified in mitigation of damage which would be done to the Special Protection Area.

**Sustainable Development:**

The Martyr's Lane Recycling Centre is working at capacity already.  
There is a lack of public transport e.g. bus services.  
Local stations are at capacity and beyond reasonable walking distance.  
New infrastructure would need to be provided. Existing infrastructure within reasonable distance has no capacity ie. schools, medical centre, community centre, sport/open areas, library, shops, broadband/mobile connections, sewerage/drainage/refuse.

Finally, the LDF Working Group should be made up of Members which give a fair reflection of the Borough as a whole – not just consist of Members from the south of the Borough. The current group should be disbanded and reformed to represent the entire Borough.

## Officer Response:

Objections to the proposal are noted and will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the details raised in the representation in detail, including: traffic implications including impacts on the A245 and A320; how transport mitigation measures will be required to ensure safety is maintained; the potential for urban sprawl and impact on landscape designations, including the Green Belt; the public transport provision and accessibility to train stations; the provision of infrastructure (including public transport infrastructure); issues with sink holes; the impacts on the recycling centre; whether the development would amount to 'sustainable development'; the make-up of the LDF Working Group and intentions to re-constitute the group.

With regards to cumulative traffic impacts with the Fair Oaks and Longcross proposals:

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the impacts on the environment and provision of SANG:

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy. The Council's response to these organisations can be accessed for further information on this issue.

Policy CS8: Thames Basin Health SPA of the Core Strategy accords priority to the SPA. The policy allows scope for bespoke SANGs to be secured if it is considered feasible and deliverable. The Council takes a precautionary approach towards harming the SPA and as such has applied this rigorously, and will continue to do so in the future. The Council has identified sufficient SANG capacity through existing SANG sites and proposed allocations in the draft Site Allocations DPD to enable the delivery of the Core Strategy and beyond. The Council will engage with Natural England to agree the nature and size of SANG that will be needed to serve this development if it is allocated.

**Contributor Reference:** 02135/1/001  
**Customer Name:** Mr And Mrs G And S Emes

**Summary of representation:**

Support proposal, in favour of development at Pyrford, with the exception of building on the golf course.

Martyrs Lane site has little scenic value and little public amenity value.

The fields in Pyrford form part of the best rural landscape in the Woking area. It is important to preserve its countryside feel for future generations to enjoy.

Martyrs Lane site is better connected to the road network and better placed to deal with additional traffic. The Pyrford roads are narrow and badly equipped to deal with increased traffic congestion – in particular Coldharbour Road where it passes the primary school.

**Officer Response:**

Support is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is recognised that the local community in Pyrford highly values its rural landscape. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close

proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under Section 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Ms Margaret Hornsby

**Summary of representation:**

Objects to the proposal:

Pressure on existing roads, especially A320;

Lack of public transport;

Stress on existing infrastructure with no plans to build more schools or hospitals in the area;

The recycling centre is located in the middle of the proposed development.

**Officer Response:**

Objection is noted.

The issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02141/1/001

**Customer Name:** Hook Heath Residents Association

**Summary of representation:**

**Representation A:**

The Hook Heath Residents' Association support the proposal – it represents an appropriate location for sustainable development.

The HHRA would not normally support release of land from the Green Belt for development. However, as the Core Strategy Inspector established a requirement for a Green Belt Review, the HHRA accepts the need for appropriate release of Green Belt land in Woking to support sustainable development. HHRA do not believe the Council have produced any robust, substantive evidence to justify the need to safeguard land for 1,200 homes in the Green Belt during 2027–2040, but focus below on the merits of safeguarding land east of Martyrs Lane assuming this evidence will eventually be produced.

The site has distinct locational advantages, and:

- Major employers are nearby, including McLaren, St Peter's Hospital, the Animal and Plant Health Agency and employment areas around Albert Drive to the south west. There is also easy access to these employers. Future residents can live near to their jobs, providing opportunities for more sustainable patterns of movement e.g. walking, cycling and use of public transport.
- Opportunities for sustainable patterns of movement: West Byfleet station is within reasonable walking and cycling distance; Woking station is within cycling distance. The A245 has bus links. Further bus services can be provided, linking the site with the town centre, areas of employment and public transport hubs.
- Access and accessibility: the whole of the site is readily accessible and provides outstanding road links via the A245, A320 and M25. Safe and suitable access can be provided.
- Landscape character: the site is situated within an indistinctive landscape and is well-contained, with trees and planting to site edges (whereas much of the land to the north, south and west of Woking represents high quality landscape character). Development would not lead to significant harm on landscape. The Core Strategy affords significant weight to the protection of local landscape e.g. via policy CS24 (which was largely ignored by the Green Belt review – a fundamental flaw). The Martyrs Lane site does not conflict with CS24.
- Efficient and effective use of land: opportunity to regenerate disused parts of the site and a waste site, according with para.17 of the NPPF, via a comprehensive, master-planned approach to the benefit of the public.

– Delivery of sustainable development: opportunity to plan over the next ten years for an outstanding new sustainable community. Land values will increase by almost 10,000%, and money can be re-invested into the new community and surrounding area for overall benefit of the people of Woking. Better opportunity to plan for affordable housing, excellent architecture, new schools, community services and facilities, efficient public transport, high quality ongoing estate management – as opposed to another bland housing estate, largely reliant upon existing overstretched services and infrastructure.

A development brief for the site evolved through public consultation would be essential. The Council should encourage the development of a neighbourhood plan, with the site as its focus. This would encourage a community-driven development.

All of this is achievable due to the large scale of the site. Smaller sites for housing result in 'housing estates' rather than sustainable communities.

– A permanent Green Belt: the release of a single, large site with logical boundaries and comprising areas of similar character (rather than entirely distinctive areas being lumped together simply because they're adjacent) provides for a reasonable change to the Green Belt, and will not create isolated Green Belt land, in line with NPPF policy. The openness of the surrounding Green Belt can then be preserved, as per the NPPF.

Representation B: objection to the Consultation Paper's approach to the release of other sites in the Green Belt prior to 2027

The Consultation Paper is flawed. It uses irresponsible wording: it contends there are safeguarded sites for release from the Green Belt, which is incorrect. The Regulation 18 plan was the subject of significant objection due to major flaws in its production and content. There are no policies that safeguard sites and therefore there are none to be replaced with the Martyrs Lane site.

The replacement of the six sites would in fact have a relevant impact on other sites identified for release from the Green Belt e.g. site GB14, which is intrinsically related to sites GB10 and GB11. If GB10 and GB11 are not to be removed from the Green Belt, neither should GB14 (ref. WGB020g).

The Consultation Paper is therefore misleading to suggest that there will not be an impact on previously proposed sites for removal from the Green Belt prior to 2027.

The HHRA object to the attempt of the Consultation Paper to legitimise the content of a flawed draft DPD. It is argued that a major release of land from the Green Belt has been proposed (rather than the stated minor amendments on p3 of the DPD), which requires clear, well-evidenced justification. The Green Belt boundary review is fundamentally flawed (as demonstrated in representations made during the Regulation 18 consultation), and the Council cannot therefore legitimately rely upon its draft Site Allocations DPD, which is referred to in the Consultation Paper.

Unless it addresses and amends the erroneous approach in paragraphs 1.10 and 1.11 of the Consultation Paper, the Council risks failing in its statutory duty to demonstrate its approach to the Green Belt review reflects the great importance attached to Green Belts (as per NPPF). It is therefore open to legal challenge.

#### **Officer Response:**

The merits of the proposal as put forward in Representation A are noted and will weigh in the balance of considerations by Members.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers, and that there would be an opportunity for residents to live near their jobs, using sustainable means of transport. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts, as suggested in the representation. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website. Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve bus service provision and frequency whether the six sites or Martyrs Lane is developed. It is accepted that there may be an economy of scale associated with the Martyrs Lane for investment in public transport infrastructure, as suggested in the

representation, but the originally proposed sites are also of a sufficient scale to allow for infrastructure improvements in these areas.

The Council will work with a range of infrastructure providers such as Surrey County Council and Clinical Commissioning Groups, whose views (on transport infrastructure, education, healthcare provision etc) will be seriously considered if the Martyrs Lane site is to be allocated. If the need is proven at the time of the review of the Core Strategy and/or the Site Allocations DPD (i.e. at the time the site would be allocated rather than safeguarded), the Council will include various key requirements on infrastructure provision for the development of the site to be acceptable. The Council will work constructively with infrastructure providers to support the development of the land if it is allocated and/or developed. This is equally true of the originally proposed sites.

Regarding the representation on landscape character, the Peter Brett Green Belt Boundary Review recommends a range of sites that are suitable to be safeguarded for development. It makes this recommendation after acknowledging the references made in the representation (on quality of landscape character and policy constraints). Detailed analysis and reasons for these recommendations are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The report specifically refers to the policy relating to the protection of the escarpment, and makes recommendations about which parts of sites could be developed without compromising the integrity of the escarpment. It should be noted that if the originally proposed sites were selected for safeguarding, key requirements for developing the sites would be set out as part of the review of the Core Strategy and/or Site Allocations DPD, to be informed by up-to-date evidence at the time. It is likely, however, that key requirements would require any development to pay regard to landscape character, including designations such as the escarpment and rising ground of landscape importance (taking into account recommendations from the evidence base about which parts of sites are developable without compromising landscape character). These constraints are not considered to be major and could be accommodated in development with design or mitigation. The Council agrees that the Development Plan for Woking has robust policies in place to protect valued local landscape, and these policies must be taken into account by any development coming forward.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site, including its landscape sensitivity, are set out in paragraph 3.5.11. The site is considered to have a low capacity for change, and development would lead to significant adverse effects on the landscape pattern and features. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all

ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed.

The merits of delivering sustainable development at this location as set out in the representation are noted. The Council proactively works with the local community in setting up Neighbourhood Forums and preparing Neighbourhood Plans, and would welcome assisting the community in the Woodham and Horsell area should this site be selected for safeguarding.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts. The adoption of a Neighbourhood Plan, potentially including a design code for the site as suggested, could also facilitate the collection and investment of CIL monies which can be spent by the Forum on any infrastructure projects identified in this area. This is also true of the originally proposed sites which fall within adopted Neighbourhood Plan boundaries.

The Council has adopted a Statement of Community Involvement (2015) setting out how public consultation is considered to be a key part of the planning process. The Council encourages pre-application consultation with the community, and in particular recommends public meetings combined with design exercises for large-scale development (where sites would accommodate 200 dwellings or more, or where site area is 4ha or more). This would apply to all sites under consideration for safeguarding, with a view to achieving community-led development.

The Council's approach of looking ahead into the future beyond the period of the Core Strategy is necessary to ensure that there is a permanent and enduring defensible boundary of the Green Belt, consistent with the NPPF, as reflected in the representation. Officers are satisfied that the letter and spirit of Section 9 of the NPPF (which deals with the protection of Green Belt land) has been followed in preparing the draft Site Allocations DPD. It is agreed that the release of the Martyrs Lane site from the Green Belt will achieve logical and defensible boundaries, but this is also true of the originally proposed sites. Further detail is provided in Section 2 of the Regulation 18 Consultation Issues and Matters Topic Paper.

In conclusion, the Council notes the locational advantages of the Martyrs Lane site as set out in the representation. The merits of the original six sites have already been given in the Officer's

response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

#### Representation B:

The preparation of the Site Allocations DPD is a formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79-95 Lovelace Drive, Teggs Lane, Pyrford

GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the emerging Development Plan for Woking Borough.

Based on the above, whilst the draft Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'. The Council has referred to the DPD as a draft.

It should be noted that the Regulation 18 version of the Site Allocations DPD is based on a wide range of evidence base documents and not entirely on the Green Belt boundary review prepared by Peter Brett Associates. As set out in Section 8.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council has used a number of evidence base documents to inform the Site Allocations DPD. Since the publication of the draft Site Allocations DPD, the Council has also published a number of other evidence base documents including additional

transport and landscape studies. Further details can be found on the Council's website as well as within the Land to the east of Martyrs Lane Consultation Document.

It was not the intention of the Council to mislead the community by referring only to the substitution of proposed sites between 2027–2040. Site GB14 was excluded because it was not proposed to be safeguarded for housing development, but rather for green infrastructure purposes. The thrust of this consultation exercise is to gain views to inform the Council's future decisions on whether the Martyrs Lane site would be a reasonable substitute to deliver the same minimum amount of housing that the originally proposed sites which were allocated for housing would deliver. The draft Site Allocations DPD does include sites GB14 and WGB020g to assist in ensuring a strong defensible Green Belt boundary is achieved. It would therefore be reasonable to reconsider the inclusion of these sites in the next iteration of the Site Allocations DPD should the Council decide to substitute sites GB10 and GB11 with the Martyrs Lane site.

Offices are aware of the criticism made against some of the details of the Green Belt boundary review. Officers are satisfied that the studies supporting the draft Site Allocations DPD are robust and sufficiently comprehensive to withstand scrutiny at Examination. The Council sets out its reasons for this position in detail in the Regulation 18 Consultation Issues and Matters Topic Paper at Sections 7, 8, 10, and C, and at Section 21 explains how the amount of land being proposed to be released is considered to be relatively modest.

**Contributor Reference:** 02150/1/001  
**Customer Name:** Mr Mohamed Ismail

### **Summary of representation:**

Supports the proposal:

- Proximity to A320 with good access to Woking station, hospital, M25 and Heathrow;
- Cost effective to incorporate all housing facilities on this large site;
- Ideal location between shopping areas and supermarkets e.g. Sheerwater Asda, Addlestone Tesco, Woking Town Centre, West Byfleet Waitrose;
- Benefit from close proximity to Horsell Common;
- Good, established infrastructure – roads, cycle routes, bus routes, pavements and paths;
- Proximity to large employers attractive to future occupiers, with reduced travel times to work and reduced burden on roads.

### **Officer Response:**

Support for the proposal is noted and the merits as set out in the representation will be weighed in considerations by Members.

It is acknowledged that the site has good accessibility to these main roads and motorways. However, it is possible that a site of this scale may have adverse impacts on existing traffic on these routes, which would need to be mitigated. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Accessibility to services and facilities was assessed in the Sustainability Appraisal of the site, and was found to be limited. Facilities are generally beyond reasonable walking distance, but within cycling distance. The canal acts as a barrier to easy access to Sheerwater. The need to travel to access existing services and facilities would be increased, although infrastructure improvements to cycling routes and for bus services may improve accessibility by sustainable modes of transport. There is also an opportunity to provide new local community services and facilities within the development.

Proximity to Horsell Common for beneficial recreational purposes is noted. However, the impacts on biodiversity of this protected area would need to be taken into account. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Officer Response:**

Objections are noted.

All of the issues are addressed in full in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02176/1/001  
**Customer Name:** Ms Annie Girotti

**Summary of representation:**

Objects to the proposal. Together with Broadoaks and Sheerwater developments there will be a cumulative adverse impact on services and traffic volume in West Byfleet, even with mitigation measures or proposals to build new facilities. Recent problems with Old Woking Road highlight the huge increase in traffic volume even before new developments have taken place. Wait to see what impacts the new developments have on the community before agreeing to further developments.

**Officer Response:**

The Council accepts that there are likely to be traffic implications of the proposal, including on the road network around West Byfleet. The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The transport studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

It should be noted that the site would be safeguarded for development between 2027 and 2040. This would therefore allow time for any development proposals at the current time to 'bed in', and the impacts of these developments (for example on traffic and infrastructure) can be taken into account in planning for development at safeguarded sites.

**Summary of representation:**

Objects to the proposal.

- Loss of Green Belt land, leading to urban sprawl – particularly with Fair Oaks proposal;
- Increased flood risk due to increased urban surface area and loss of trees;
- Pressure on existing roads, particularly A320;
- Lack of public transport;
- Stress on existing infrastructure and no plans for new infrastructure;
- Severe loss of wildlife;
- Loss of trees and woodland;
- Under the flight path;
- Recycling centre located in the middle of the site.

**Officer Response:**

Objection is noted.

All of the issues raised are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02188/1/001  
**Customer Name:** Mr Robert Jewkes

**Summary of representation:**

Support the Martyrs Lane proposal.

The site is large enough to accommodate 1200 homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus and cycle routes already exist. There is little development along the A320 so road widening if needed would be easy. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site has no national or local landscape designation unlike the other sites.

Most of the site is within Flood Zone 1 and will make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing and specialist residential accommodation, something that the Council is currently under providing.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking. The site is in a sustainable location, close to services and facilities. It would comply with the requirements of CS14. Ten Acre Farm can therefore be removed from the Site Allocations DPD for traveller accommodation.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Summary of representation:**

Supports the proposal (although Surrey is already over-developed and the infrastructure is unable to cope with demand), excluding the golf course.

Planning permission has already been granted on the top part of the site, and includes previously developed land.

Part of the site is owned by Surrey County Council.

There is no public access to the land.

Public transport links are better.

Better access to the A320, leading to the M25 and Woking Town Centre.

**Officer Response:**

Support is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the

determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land originally proposed offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02102/1/001

**Customer Name:** Mr Neil Cryer

**Summary of representation:**

Agrees to substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

The proposal will impact fewer nearby residents. Personal assessment demonstrates that there are 11.2 times more residents around the previous 6 identified sites than there are round Martyrs Lane.

The site is close to the existing road network such as the A320 and M25. It has better access to Woking town centre and the rail station than the other sites. The A320 has little development along it and road widening would be easy.

One compact housing development makes the provision of infrastructure easier and at less cost.

The site is close to major employers.

Part of the site has previously developed land and was granted planning permission for a McLaren Technology Centre.

The site could be used for Gypsy and Traveller accommodation.

The site is larger than the six other sites and could be used to meet housing need beyond 2040.

There are no national or local landscape designations. Some of the previously proposed sites have rising ground and escarpment designations.

The decision to build there will mean it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The

Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 at Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The suggestion that the Martyrs Lane site could be used for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

Regarding the representation relating to the size of the site, it is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this

recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 02104/1/001  
**Customer Name:** Mr Gordon Denney

**Summary of representation:**

Supports the proposal at Martyrs Lane and objects to development in Pyrford.

Woodham is a residential neighbourhood with no centre or meeting place, there are very few facilities for the community and part of the area is badly in need of development.

The site would create economies of scale and provide opportunities for new community facilities including the provision of affordable housing and shops.

The original proposal can not make planning or economic sense.

**Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of new homes and facilities. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and in this particular regard, there are no perceived relative advantages over each other.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 02110/2/001  
**Customer Name:** Mr Giles Blackham

**Summary of representation:**

Objects to the proposed safeguarding of Martyrs Lane for future development needs.

The majority of the site is Green Belt which limits urban sprawl. This development will result in urban sprawl.

The site also contains historic woodland and part of the SSSI within Horsell Common.

The development proposal is oversized and will led to a significant increase in road traffic on roads that are already near capacity.

Understands the need for new homes but these should be in smaller developments with less individual impact and on land that isn't either Green Belt or environmentally sensitive.

If you add this proposal to the Fair Oaks development this would result in 5000 new homes into a very small area of land which will have a significant impact on residents, wildlife and the environment. This is not acceptable.

**Officer Response:**

Objection to the proposed safeguarding of Martyrs Lane for future development needs is noted.

The representation relating to urban sprawl, Ancient Woodland and infrastructure and congestion has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Whilst it is recognised that the site is in close proximity to Horsell Common and its SSSI and Thames Basin Heaths Special Protection Area, it should be noted that the land is not covered by any absolute environmental constraints. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national policy. The focus for consideration for the DPD should be about ensuring that the proposed allocations are the most sustainable when compared against all other reasonable alternatives. The representation relating to the impact of development on residents, wildlife and the environment are noted and will weigh in the balance of considerations by Members.

The Council is aware of the potential development at Fair Oaks in Surrey Heath. The council is working with Surrey Heath Borough Council as well as the County Council to identify the necessary infrastructure and mitigation measures needed to support the proposed developments. As part of the work the Council is undertaking, it is working in partnership with Surrey Heath Borough Council, Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of Longcross, Fair Oaks and Martyrs Lane.

**Contributor Reference:** 02112/1/001  
**Customer Name:** Mr David Harvey

**Summary of representation:**

The land to the east of Martyrs Lane is the best safeguarding option, excluding the New Zealand Golf Course.

The top part of the site was recently granted planning permission for a technology centre and some of this area is previously developed land, of which some is semi-derelict.

Much of the northern site has already been used for non-agricultural purposes and there is currently no public access to the land.

If a single site were chosen, the infrastructure needed with building new homes could be alleviated.

There is good public transport to the north of the site – not the case with the other six sites.

The road system to the north of the site is also good – the A320 to Woking and also access to the M25 in the other direction.

There are possible employment opportunities at St Peter's and the Animal & Plant Health Agency.

There would be less disruption to the residents of Woking with the choice of one site than by six individual sites.

Therefore support the consultation proposal as this will have the least impact on the borough and minimise disruption.

**Officer Response:**

Support for the Martyrs Lane site to be safeguarded for future development needs is noted. Whilst the representation expresses support to retain the New Zealand Golf Course, it should be noted that parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

Regarding the capacity of the site, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Based on the information from the other land owners within the site, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes without the Council using its Compulsory Purchase Powers to acquire land.

It is acknowledged that part of the site was granted planning permission for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the Martyrs Lane site is not used for agricultural purposes, the same can be said for the majority of the six original sites identified in the draft Site Allocations DPD. In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarding options are classified as high quality agricultural land by DEFRA. In this particular regard, there are no perceived relative advantages over each other.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02089/1/001  
**Customer Name:** Mr Brian Dodd

**Summary of representation:**

The Green Belt sites in Pyrford have good transport services, a strong local community feeling, the recent approval of the Pyrford Neighbourhood Plan and good community assets including the schools and halls. However development would result in the loss of access to walking areas, increased traffic and that the community would be extended.

Martyrs Lane is big enough to create a new community and it has space for cycle tracks on both side of Guildford Road. However the roads are busy and development would increase traffic loads. It would also lead to the community being extended.

In favour of the Martyrs Lane site and object to Upshot Lane development.

**Officer Response:**

The merits of the land east of Martyrs Lane and the sites in Pyrford, as set out in the representation, are noted and will weigh in the balance of considerations by Members.

The comments relating to development in Pyrford, including the impact on amenity and well-being, traffic and congestion and the impact of development on the existing community, have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

In response to the representation regarding extending the existing communities at both Pyrford and Martyrs Lane, it should be noted that most of the housing need for the Borough is internally generated. Consequently it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that development of the site(s) would increase the population of the local area, however it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development.

The recently adopted Pyrford Neighbourhood Plan is now part of the Development Plan for the area. Any development proposals within the Neighbourhood Area would be assessed against the relevant policies of the Neighbourhood Plan in addition to the policies set out in the Core Strategy and Development Management Policies DPD.

Whilst a new community could be developed at the Martyrs Lane site, as set out above the Council has a number of policies and best practice guidance in place to ensure that any development proposal, regardless of location, should create a sense of place and be integrated with the surrounding area. This includes Policy CS21: Design and the Design SPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Overall support for Martyrs Lane is noted.

**Contributor Reference:** 02098/1/001  
**Customer Name:** Ms Lucy Grivvell

### **Summary of representation:**

Martyrs Lane is a previously developed site. Pyrford's unique semi-rural setting is largely unspoilt with open views to the south. The fields form part of the escarpment. The sites have been farmed for centuries and emphasise the distinctive character of the area highlighted in the Pyrford Neighbourhood Plan.

Martyrs Lane's 3 sites to the north of the golf course are almost unused, partly pre-developed and derelict. There is no landscape element, no known footpaths and the public seem not to use it. The site benefits on one.

Planning permission has been granted for a factory in the northern section of the site. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. Although never developed this demonstrates that its viability as a factory stands and the building of houses is a viable alternative option, based on the reasons given for the McLaren planning permission.

The land also includes a former army camp, disused sports field and general debris. The SCC Waste Site has 7ha of derelict land to the rear. Both sites have been offered for development for several years now.

The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked. It is unacceptable that the six original sites were in the DPD when the previous use and availability of the Martyrs Lane site is considered.

There has been confusion regarding the number of dwellings required to be safeguarded. Only 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in

Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

The representations relating to heritage, local character, amenity and landscape have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

Regarding the representation on development viability, the Council through the preparation of the Core Strategy, Community Infrastructure Levy and Site Allocations DPD is confident that development at either of the proposed safeguarded options would achieve positive viability.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the

six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to

manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on the urban boundaries, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unhelpful to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Contributor Reference:** 02067/1/001  
**Customer Name:** Mr Simon Gaskin

**Summary of representation:**

Objects to development in Pyrford and supports safeguarding of Martyrs Lane.

Martyrs Lane includes previously developed land in the Green Belt that includes disused army buildings and land recently approved planning permission for McLaren to build a technology centre. Also includes waste land currently owned by Surrey County Council.

Public access to the site is poor and much less amenity and heritage value than the other proposed sites.

A single site can be developed more economically and with less disruption to the population than six separate sites across the borough.

A single site will allow infrastructure services to be developed without the difficulties of having six separate sites across the borough.

**Officer Response:**

Objection to development in Pyrford and support for Martyrs Lane is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It should be noted that less than 1 per cent of the site area is within public ownership. Surrey County Council's land holdings include the existing Martyrs Lane Recycling Centre. Whilst the land to the rear of the Recycling Centre is designated by Surrey County Council as a Waste Safeguarded site, this land is not within the ownership of Surrey County Council.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by heritage constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition,

development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mrs Janet Bagley

**Summary of representation:**

Support for the Martyrs Lane site.

Road access is convenient to Woking and the M25.

A single site would involve less disruption to the locality and be more economical.

The site benefits from public transport.

Part of the site is in public ownership therefore helping council tax payers.

The Pyrford site would involve major disruption to the road network.

Therefore favour the Martyrs Lane site and object to Pyrford sites.

**Officer Response:**

Support for the Martyrs Lane site and objection to the Pyrford sites is noted.

Whilst the Martyrs Lane site is adjacent to the A320 and A245, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to

exacerbate congestion on the A245 (Woodham Lane/Sheerwater/Parvis Road) and A320 (Chertsey Road/Guildford Road).

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst some of the land within the site is publicly owned land, this makes up less than 1 per cent of the total site area and therefore does not make up a significant proportion of the site.

The representation relating to the traffic implications of safeguarding the Pyrford sites has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02078/1/001

**Customer Name:** Mr David Earl

**Summary of representation:**

Pyrford is a small village with a congested main road due to the various community and social infrastructure located along the road. Additional development will make the situation worse which is particularly dangerous at school drop off times.

The high price of land in Pyrford makes it unlikely that any affordable housing will be provided to meet the needs of young people and low paid workers.

The area is already overstretched and therefore objects to development in this area. Preference for more town centre housing or development of a single site at Martyrs Lane when the infrastructure is less likely to cause traffic chaos and there is room for new community services.

**Officer Response:**

The reasons outlined in the representation against development in Pyrford is noted. The matters relating to traffic and road infrastructure have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is

specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02088/1/001  
**Customer Name:** Mr Alec Ashley

**Summary of representation:**

Martyrs Lane would provide better access to the M25 and Woking via the A320. It can also provide the necessary infrastructure for a development of this size. Saunders Lane has very poor access and the A320 is already at capacity.

**Officer Response:**

Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 Chertsey Road/Guildford Road corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The reasons against development on Saunders Lane is noted. The representation regarding the existing road network in Mayford has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02091 /1 /001  
**Customer Name:** Mr Jon Badman

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

**Officer Response:**

Support noted

**Contributor Reference:** 02099/1/001  
**Customer Name:** Ms Catherine Yeo

**Summary of representation:**

Support the Martyrs Lane proposal.

The site is large enough to accommodate 1200 homes, including affordable housing, Gypsy and Traveller accommodation and the necessary infrastructure such as shops, primary schools, health centres, etc. etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus and cycle routes already exist. There is little development along the A320 so road widening if needed would be easy. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site has no national or local landscape designation unlike the other sites.

Most of the site is within Flood Zone 1 and will make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing and specialist residential accommodation, something that the Council is currently under providing.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking. The site is in a sustainable location, close to services and facilities. It would comply with the requirements of CS14. Ten Acre Farm can therefore be removed from the Site Allocations DPD for traveller accommodation.

Due to the size of the site, it will be possible to meet all of Woking future housing and traveller needs on one site between 2017 and 2040 and beyond 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Customer Name:** Ms Leigh Pitts

**Summary of representation:**

Understands that development in the local area is necessary.

Strongly opposed to development in Pyrford. Not only as they are a local resident but because the nature and character of the village will change forever. Pyrford has rural charm, with roads with no pavements that are narrow. There is a village feel which should be preserved. There is also a strong loyal community.

The existing infrastructure is at capacity. Further development in the village would change the face of Pyrford.

Woodham does not have the same merits, it is a town with no real centre, shops or facilities. It is characterised by the busy road which goes through it. It would benefit from the development of a central point and potential new community services and facilities. The road infrastructure is already in place. Building north of the New Zealand Golf Course would create a development with great links to major roads such as the M25 and M3, without having a detrimental impact on the local area, wildlife and community. It wouldn't change the character of Woodham to its detriment or spoil a rural setting. New local facilities would ease the pressure on the West Byfleet Health Centre and local schools.

Do not destroy Pyrford and its rural charm.

**Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane site is noted.

The Council has addressed the matters relating to development in Pyrford, including the impact of development on local character and the provision of infrastructure in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the representation relating to the provision of infrastructure at Martyrs Lane, it should be noted that the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Whilst the representation notes that development could be accommodated in the land to the north of the New Zealand Golf Course, two parcels of land in this area had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) and were comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. In addition, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor towards the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regardless of the Council's preferred safeguarding option, the social and environmental implications of any future development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. There are also a number of biodiversity requirements that future development proposals would have to address such as Core Strategy Policy CS7: Biodiversity and nature conservation, which restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Regarding the representation relating to the impact of development on the local character, as set out in the Regulation 18 consultation Issues and Matters Topic Paper, most of the housing

need for the Borough is internally generated and consequently it is envisaged that planning to meet that need should not undermine the overall social fabric of the area, regardless of where in the borough development takes place. The Core Strategy, Development Management Policies DPD and Design SPD include robust policies and guidance to make sure that the design of development will be to a high standard and sympathetic to the general character of the area. Whilst there is no doubt that development will increase the population of some areas or wards, through the provision of adequate infrastructure, its impact on social, environmental and infrastructure pressures should be minimised.

**Customer Name:** Ms Amy Lambkin

**Summary of representation:**

Object to building on Pyrford Fields because this is already a heavily populated area and traffic congestion. There is so many other areas across Surrey that have more space and not as congested as this area. I do not believe the area can cope with any more building and this area is surrounded by Green belt that surely should be protected.

**Officer Response:**

Objection to building on Pyrford Green Belt is noted.

Regarding the issues raised in the representation about the Pyrford sites such as Green Belt status, infrastructure and increased population, these issues have been addressed in detail in the Regulation 18 consultations Issues and Matters Topic Paper; particularly in sections 1.0, 3.0 and 23.0.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Customer Name:** Mr Ian Hall

**Summary of representation:**

Objects to building on Pyrford Green Belt and all Green Belt land due to its designation such as to enable people to enjoy the countryside and to stop the sprawl of developed areas merging into one another. However if it is essential that the council has to meet a certain housing target, then the proposed development at Martyrs Lane makes far more sense, as this will substitute 6 areas of development for one. The Green Belt area in Martyrs Lane is not readily accessible and has already been built on in places.

**Officer Response:**

Support of the proposal in favour of development at the Pyrford sites is noted.

The justification for the release of Green Belt land to meet the future housing needs of the Borough is set out in detail in Sections 1 and 2 of the Regulation 18 consultation Issues and Matters Topic Paper.

The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- To check the unrestricted sprawl of large build up areas;
- To prevent neighbouring towns merging into one another; and
- To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt – including the merging of neighbouring towns – are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- Woking Green Belt review (2013) by Peter Brett Associates; and
- Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, the land to the east of Martyrs Lane is considered to be less suitable for removal from the Green Belt than the previously identified sites, in terms of contribution to the purposes of the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings, and some land that has been previously developed. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Despite containing previously developed land, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02051/1/001  
**Customer Name:** Mr Michael Cooke

**Summary of representation:**

The Martyrs Lane site is not only large enough for the 1,200 houses for period 2027–2040, but can also hold accommodate more houses and the necessary infrastructure such as shops, primary school and a health centre. This means that it provides a genuine long term answer to supplying housing land around Woking, even beyond 2040. The alternative six sites are located in areas where there is either no infrastructure or an overstretched infrastructure and thus the single site provides a solution that is more sustainable.

Having a single site will simplify the planning processes, allowing WBC's stretched resources to concentrate on a single large development.

Creation of a single estate/community allows measures to deal with the extra traffic to be contained. Sites GB10 and GB11 in particular would rely on the A320 south of Woking to deal with extra traffic. The A320 to the north of Woking, though busy, is not as congested. Widening this section of the A320 would be relatively easy and bring benefits to Woking as a whole. The Martyrs Lane site would also be well-positioned for access to the M25, providing good access to the road network outside the Borough.

In addition to the McLaren Technology Centre, residents from a new estate in Martyrs Lane would have rapid access both to Woking and to Chertsey. The six dispersed sites do not have easy access to employers north of Woking. This ready access to employment opportunities means that this is a more sustainable proposal.

Planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Although in the green belt, the site has no other national or local landscape designation unlike some of the other proposals. This particularly applies to site GB11 which is within the escarpment and rising ground of landscape importance and also contains Little Gorsewood, a grade II listed building.

With the Council's intention to redevelop Sheerwater, a decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater and a joined up approach taken to the provision of infrastructure.

With a single large site, the creation of a new community will be easier and the building work will cause less disruption than with the alternatives.

While opposed to building in the green belt in general, from the above I conclude that, given a need to safeguard land, the proposal to replace the six sites by a single one at Martyrs Lane is a sensible way forward.

#### **Officer Response:**

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to employment opportunities. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs, irrespective of whether it is north or south of the Borough. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a

development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as the escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application. It is important to note, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The social and environmental implications of any proposed development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the

development management stage. In addition, the traffic implications of the proposal as well as the cumulative effect of development within the wider area will also be taken into consideration.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The representation regarding disruption to existing communities is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Opposed to any development on the Green Belt, if there is no alternative then prefers developing the Martyr's Lane site rather than Parcel 9 (Pyrford).

The two fields in Pyrford are defined in the Brett Woking Green Belt report as of very low suitability for development and indeed this category is described as land fundamental to the Green Belt. The report also considers the Pyrford site to be within the Major Environmental Constraint category and is protected by the Woking Core strategy CS24. Finally, the report concludes that the two fields have either little/no capacity for change or low capacity for change. The Pyrford site is bounded by small country roads and lanes and would require significant improvements in the local infrastructure, including utilities, medical and schooling facilities. All three primary schools in the West Byfleet/Pyrford area have recently undergone expansion to accommodate current child numbers; further expansion is probably beyond the capacity of each site. The Health Centre at West Byfleet is already full with three surgeries with little capacity to take further numbers.

In considering the Martyr's Lane site, it contains no local or national landscape designations and has already been partially developed with both military and civilian dwellings during WWII and subsequently. Thus, its loss to the Green Belt would be less severe than that of the Pyrford fields. It is adjacent to a major trunk road (A320) and the Surrey County Council traffic reports (Jan 2105 and Sept 2016) suggest that the development of the Martyr's Lane site would have far less impact on traffic conditions than the development of the other six sites. It is large enough to accommodate the necessary infrastructure developments.

WBC has estimated that 1024 new houses are needed (not 3,500 which is also widely reported) to satisfy the future housing requirements of Woking, This could be satisfied either by selecting all of the six smaller sites or just the larger Martyr's Lane site. It would appear to make economic (and social) sense to select one larger site rather than six smaller ones, especially as it is lower quality Green Belt land, able to accommodate the necessary infrastructure and is more accessible.

**Officer Response:**

Support for the Martyrs Lane site and opposition to building on the Pyrford site is noted.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes

shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites. Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst some of the land within the Martyrs Lane site contains existing structures and buildings, including sports facilities, agricultural buildings and residential properties, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 02053/1/001  
**Customer Name:** Mr Roger Mitchell

**Summary of representation:**

One large site is preferable to six small sites which can only be sub-optimal. Disruption would be confined to one area. The road network around Martyrs Lane has more capacity than, for example, Saunders Lane which is narrow and constrained by traffic-light controlled railway bridges. The quality of Green Belt land in Martyrs Lane is not comparable to the Hook Heath escarpment. This would be a better use of golf club land of which there is an inordinate amount in the Borough.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure, including transport infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The potential impacts of the previously proposed sites on traffic around Saunders Lane has been addressed in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively

assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

New Zealand Golf Club has made a representation stating that the Golf Course land will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 02054/1/001  
**Customer Name:** Mr Robert Catt

**Summary of representation:**

The land is more suitable for development in that it has no special landscape designations unlike the previously proposed areas – much of the land is disused and poorly maintained and part of the land has already been subject to a successful planning application for its development by McLaren.

The road infrastructure North of Woking is better able to be adapted to support the development of this site rather than adding to the transport load in already heavily congested areas of South Woking – in particular to the massive traffic load to be taken on Egley Road when the new school/sports complex is completed.

As the area would form a single site, there is the opportunity to create a larger integrated single community with a single set of commercially viable infrastructure providing local facilities.

Local employers such as St Peters, McLaren are more accessible to the Martyrs Lane site, as is access to transport links such as M25, Heathrow and Woking railway station.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response

to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

**Customer Name:** Mrs H K Cooke

**Summary of representation:**

If land is required during this period then this is a much better proposal than the fragmented approach involving six sites. There is sufficient land to accommodate houses and infrastructure, and thus create a new community. It will also not add to the pressure on Woking's already stretched infrastructure. With easy access to West Byfleet and the A320 to Woking and the M25, this is a more sustainable solution than the alternatives.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of transport, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02059/1/001  
**Customer Name:** Ms Amanda Turner

**Summary of representation:**

Objects to development of the fields in Upshot Lane/Aviary Road. Impact on traffic volume and local resources i.e. the local village school, the doctors and hospitals. Impact of development on landscape and community.

It would be better to build a 'mini-village' development in the Martyrs Lane area. It would be possible to put all the homes that need to be built in one location and build an infrastructure around it. It was done many years ago in Goldsworth Park. It would also mean that the traffic from these houses would be able to access both Woking and the M25 easier and more directly rather than impacting on the narrow/village type roads around Pyrford.

**Officer Response:**

In terms of the issues raised about the Pyrford site such as infrastructure, character and landscape these issues have already been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 1.0, 3.0, 7.0 and 23.0 for the Council's response.

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

**Customer Name:** Ms Gloria Turner

**Summary of representation:**

Where houses have been knocked down and replaced by flats this has increased the number of cars on the road and park. The roads are narrow and are not built for the number of additional cars in the area. Long waiting times for doctors and hospital appointments.

Considers a single site to build new homes is better. The infrastructure can be built around the houses and there can be maybe a doctors surgery or a small primary school or nursery for the children. Development on the Pyrford Fields could impact on this semi rural community and services such as police and the council.

Supports the Martyrs Lane option and not the fields in Pyrford.

**Officer Response:**

Support for the Martyrs Lane site and objection to the Pyrford site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding health care provision has been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'. It should be noted that the Council is working with the local Clinical Commissioning Groups (CCG's) to identify future healthcare needs and distribution across the Borough to support future development.

the impact of development in Pyrford on the semi-rural community has been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', in particular section 23.0.

**Contributor Reference:** 02064/1/001  
**Customer Name:** Ms Tamara Pearson

**Summary of representation:**

Concerns about the extra traffic and pressure that would be put upon an already very busy main road. No provisions made for any additional roads and it is expected that the A320 will be able to cope. However, does not want any new roads to be built across any green belt land. Also the additional noise and pollution associated with the additional amount of cars that will be using the road.

The loss of green belt land and all the affects this will have on wildlife in the area.

Schools and Doctors Surgery in the area are already at capacity. Infrastructure will be needed to support the site such as schools and Doctors surgery. One large site in any area would cause more problems than it would solve. To break it up into smaller sites would make it more manageable for local communities, existing schools, GP surgeries, and roads to absorb.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of any proposed development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the development management stage. In addition, the traffic implications of the proposal as well as the cumulative effect of development within the wider area will also be taken into consideration. This has been addressed in further detail in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

In terms of wildlife, the land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', refer to section 1.0 for the Council's response.

**Contributor Reference:** 02065/1/001  
**Customer Name:** Mr Yusuf Sutlan

**Summary of representation:**

Additional pressure that would be put upon an already very busy main road A320, as well as all the additional noise and pollution that would be associated with all the extra vehicles using the road.

Loss of habitat to wildlife and the effects of loss of woodland to the local environment.

Loss of green belt land.

The additional pressure that we would be put upon schools and GP surgeries in the immediate area.

It would be better to split the development across the proposed sites in Pyrford, Byfleet and Mayford rather than build all the houses on one huge site.

**Officer Response:**

In terms of traffic, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of any proposed development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the development management stage. In addition, the traffic implications of the proposal as well as the cumulative effect of development within the wider area will also be taken into consideration. This has been addressed in further detail in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

In terms of wildlife, the land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. It is acknowledged that there is an Ancient Woodland towards the northern part of the site and this will be

protected as part of any development of the site if the land were to be safeguarded. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The justification for the release of Green Belt land for the development has been fully addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', refer to section 1.0 for the Council's response.

Support the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford) to meet long term future development needs of the borough between 2027 and 2040.

**Officer Response:**

Support noted

**Contributor Reference:** 02667/1/001  
**Customer Name:** Mrs Margaret Windsor

**Summary of representation:**

Supports proposed development in Pyrford, and therefore objects to Martyrs Lane proposal.

There has been little or no provision to show support for the building of many new houses on the Pyrford fields. This development would encourage and benefit Pyrford village, and bring more trade to the few shops. We who have children have no right to be so selfish as to stop local development like the now well-established Pyrford Woods estate. It is not possible to keep preserving fields when they are not being used, when houses are badly needed for so many people.

Hopes it will soon be possible to see Pyrford Village expanded and become more lively.

**Officer Response:**

Support for the originally proposed sites in Pyrford is noted.

The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all factors relating to the sustainability of the sites in question, such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts. Whilst the merits of developing the land in Pyrford as put forward in the representation are noted, they could equally apply to developing land to the east of Martyrs Lane, for example, the ability to provide a significant number of dwellings that are so desperately needed by future generations.

**Customer Name:** Ms Susan North–Coombes

**Summary of representation:**

Objects as the proposal would have a serious impact on traffic on already over–burdened road network leading to the M25 and local hospital. Infrastructure would not cope with such a large increase in population – particularly schools. It would cause more problems rather than solve problems.

**Officer Response:**

Objection is noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses the issues put forward in the representation in detail, including on likely traffic impacts and infrastructure capacity.

**Contributor Reference:** 02036/1/001

**Customer Name:** J A R Cook

**Summary of representation:**

Objects to the proposal. The environmental impact at Martyrs Lane site would be greater than that at the sites in Pyrford. Considers that, subject to adequate perimeter landscape buffers and design, the two fields either side of Upshot Lane are suitable for housing development and could make a positive contribution to the extension of Pyrford Village.

Upshot Lane is narrow and could be improved with footpaths either side and better integrated with existing footpaths and cycleways to provide improved permeability. Impacts on flora and fauna here would be minimal as fields are low-grade agricultural land with tendency to aeolian erosion all summer, which is a local air quality pollution problem.

Some development at the north-east end of the Martyrs Lane site could be acceptable.

Carry out an EIA on all sites under consideration, funded by the site owners who have a real interest in the outcome.

**Officer Response:**

The merits of the proposal to safeguard land at the sites in Pyrford, rather than Martyrs Lane, are noted and will weigh in the balance of considerations by Members.

It should be noted that detailed ecological surveys are yet to be conducted for all the sites, so the full impacts on flora and fauna are yet to be fully assessed. This will be a key requirement for any development proposal coming forward. The Council will consult with relevant biodiversity organisations including Surrey Wildlife Trust and Natural England during the detailed planning application stage, as well as require applicants to carry out prior assessments of the site to provide information on species and habitats. This will ensure the effective avoidance and/or mitigation of any adverse impacts prior to the approval of development, irrespective of which sites are safeguarded.

The Town and Country Planning (Environmental Impact Assessment) Regulation 2011 – also known as the EIA Regulations – form part of the development management system in England and relate to certain types of development. They give planning authorities a means of ensuring that they can take account of the environmental implications of individual developments in their decisions on planning applications. The Council would expect an environmental statement to be submitted with any planning application for development coming forward on safeguarded sites – but the appropriate time to undertake such studies would be at the development management stage.

The evidence that the Council has gathered in support of the Site Allocations DPD preparation stage is sufficiently comprehensive, adequate, sufficient and robust enough to inform planning

judgements about the preferred sites in the DPD, including informing considerations about the likely environmental impacts of development at the preferred sites. See Section 8 of the Regulation 18 Consultation Issues and Matters Topic Paper for full details.

Support for some development at the north-east end of the Martyrs Lane site is noted. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

**Contributor Reference:** 02037/1/001  
**Customer Name:** Ms Siobhan Osborn

**Summary of representation:**

Supports the proposal.

Is concerned about the overcrowding that will result from any development around West Byfleet / Pyrford area; the congestion on roads and pressure placed on overstretched doctors surgeries and schools.

**Officer Response:**

Support with concerns are noted.

In terms of likely traffic impacts:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies conclude that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

In terms of infrastructure provision:

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. Work on the Infrastructure Delivery Plan is ongoing, and the Council is working with providers such as the Surrey County Council and Clinical Commissioning Groups to ensure that site allocation options will be supported by adequate infrastructure such as school places and doctor surgeries.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Customer Name:** Nigel And Mary Williams

**Summary of representation:**

Supports the proposal but the New Zealand Golf Course should be excluded – the remainder of the site to the north may be capable of delivering the required housing.

**Officer Response:**

Support is noted.

However, the northern part of the site alone would not be able to accommodate all of the required dwellings. Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that

the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

**Summary of representation:**

Supports the proposal in favour of development on the fields in Pyrford.

**Officer Response:**

Support noted

**Contributor Reference:** 02084/1/001  
**Customer Name:** Ms Sarah Ross

**Summary of representation:**

Supports the proposal.

**Officer Response:**

Support noted

**Contributor Reference:** 02086/1/001

**Customer Name:** Mr Matt Brill

**Summary of representation:**

Objects to the proposal.

There is already too much pressure on existing roads, especially A320 and A245, which are in gridlock in rush hour.

Concerned about safety for resident cyclists and pedestrians at very busy junctions of A245 and B385; A320 and B3121, and at six crossroads roundabout.

**Officer Response:**

Objections are noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper provides a detailed response about the traffic implications of the proposal, including on the A320 and A245 and on safety concerns. Each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development, and to ensure safety is maintained, as per requirements in the Core Strategy and Development Management Policies DPD.

**Customer Name:** Ruby Hastings

**Summary of representation:**

Supports the proposal. It is much better located – nearer the M25.

**Officer Response:**

Support is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02073/1/001  
**Customer Name:** Mr D Harrison

**Summary of representation:**

Supports the proposal if we absolutely must develop on greenfield sites. Preference is for brownfield sites in the Town Centre, using high rise and high density to achieve the volume of housing at an affordable price.

Martyrs Lane site has good accessibility to M25. We have grossly overcrowded roads in the whole area, so getting the additional traffic from any new housing on to the M25 from the area closest on to the M25 is of paramount importance and the best way to minimise extra traffic in the town and whole area.

It's a large site with sufficient space for infrastructure e.g. schools, GP surgeries, shops etc. Better than overstressing existing resources across the smaller original sites. The whole site can become a well-designed suburb.

Access roads can be improved.

There is space for Traveller pitches.

Better opportunity to provide low cost housing (e.g. for workers at St Peter's Hospital) and housing for the vulnerable.

Future residents will use Woking's train station and can approach it without the need to go through Victoria Arch which is a massive restriction to traffic flow.

Original sites have single tracks, one-way bridges, and are already heavily congested. Any increase in traffic will cause further congestion.

The principle of development has been established due to the planning permission for McLaren's factory – so the area must be a development area.

**Officer Response:**

Support is noted.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out a detailed response on the justification for releasing Green Belt land to meet future development needs (Sections 1 and 2), and at Section 11 describes how the Council has comprehensively assessed and prioritised brownfield sites for development. Several sites in the draft Site Allocations DPD will be appropriate for high-density development, and key requirements include the provision of affordable housing.

It is recognised that the Martyrs Lane site has good access to the M25. However, the Council needs to assess the impact that such a large-scale development might have on the transport network. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

Although future residents may avoid using Victoria Arch to access the railway station, it is likely that other traffic hotspots such as the A320 may be exacerbated instead. In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites. The Regulation 18 Consultation Issues and Matters Topic Paper addresses in detail the issue of traffic impacts at the six original sites at Sections 3, 20, D, F, U and particularly V (refers to Mayford's infrastructure).

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend

that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the land east of Martyrs Lane as set out in the representation with regards to infrastructure, affordable housing and proximity to St Peter's Hospital are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. Residential development at any of the safeguarded options should be able to meet the

Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

It is recognised that the site does not have a landscape designation in relation to the escarpment, but it is still designated as Green Belt land. The Council has carried out two assessments to evaluate the contribution that the land makes to the overall integrity of the Green Belt:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point. The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the

determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It should be noted that the functional floodplain had been considered an absolute constraint and sites within it had been ruled out for consideration as reasonable alternatives for the purposes of the DPD. The defined areas of the allocated sites where development will be required to be sited were all in Flood Zone 1, where development is encouraged. None of the previously identified sites would lead to development exposed to unacceptable level of flood risk. See Section 5 of 'Regulation 18 Consultation Issues and Matters Topic Paper' for more details.

**Contributor Reference:** 02076/1/001

**Customer Name:** Mrs D G Long

**Summary of representation:**

Supports the Martyrs Lane proposal excluding the New Zealand Golf Course. The land to the north of the site is capable of delivering the required housing.

A new 'village' could be constructed providing new infrastructure and facilities. The original sites' infrastructure is overloaded. One site offers better economies of scale and provides a better infrastructure solution.

The site has better accessibility. The lanes in Pyrford, Byfleet and Mayford are unsuitable for increased traffic. The A245 through West Byfleet and over the M25 bridge has no capacity left, especially when taking into account other local development.

The Martyrs Lane site is on Green Belt land, some of which has already been previously developed. This is not true of the other three sites.

Amenity value – Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from across the borough.

Heritage – The Pyrford site includes a number of Heritage features including the Grade II listed Pyrford Court estate, Pyrford Village Conservation Area, Pyrford Common – designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of this area.

Landscape – Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.

Agriculture – The Pyrford fields have been farmed for centuries. They make an important contribution to the rural character of the area and provide an important setting for the southern approach to the town.

**Officer Response:**

Support for the proposal is noted.

A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

In terms of avoiding developing the Golf Course:

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use

except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

In terms of delivering infrastructure:

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. The Council will, however, make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council continues to work with key infrastructure providers to assess existing capacity at proposed site areas, and to plan new infrastructure where required.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of traffic:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The Regulation 18 Consultation Issues and Matters Topic Paper provides a detailed response to the issue of traffic impacts at the originally proposed sites – see Sections 3, 20, D, F, U and V.

In terms of previously developed land:

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material

considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

In terms of heritage and amenity and landscape value:

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated. The representations relating to heritage, local character, amenity and landscape have been further addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

In terms of agriculture:

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter. The contribution of the Pyrford fields to rural character is noted. However, the Green Belt boundary review took into account the landscape character and sensitivity to change of developing the parcels of land assessed. In combination with a number of other evidence base studies, such as the Sustainability Appraisal, the sites in Pyrford were selected as the overall integrity of the Green Belt would not be undermined, and they were considered to represent the most sustainable option.

**Contributor Reference:** 02097/1/001  
**Customer Name:** Mr Robert Munford

**Summary of representation:**

Supports the proposal.

The two fields in Pyrford have been farmed for centuries. They have never been built on. They are an essential component of Pyrford, providing the rural landscape essential to the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The stated objective of the plan is to 'maintain and enhance the area's distinctive and special rural and residential character.'

Pyrford's green belt field are a contributing asset and are used to produce farm crops for either animal feed or bio fuels whereas the Martyrs Lane Land has no current use at all.

Any changes will impact the lovely village of Pyrford and also increase traffic in the area.

I also believe that the infrastructure such as: Sewage, Water, Electricity, etc. would need significant upgrades to support any new houses and people.

By contrast in 2012 planning permission was granted for a 60,000 square foot factory in the northern portion of the site. This permission was revoked at the request of McLaren. Mr Freeland, an experienced planning officer in the council, considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

**Officer Response:**

Support is noted.

The Council is aware of the objectives and policies in the Pyrford Neighbourhood Plan, which now forms part of the Development Plan for the area.

In terms of the representation on landscape: the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect

of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Development Plan for Woking includes robust policies to protect landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies (particularly in terms of design of development) to make sure that their development does not compromise valued landscape assets or the character of the area. Further detail is given in Regulation 18 Issues and Matters Topic Paper at Sections 7 and 23.

The Topic Paper also provides a detailed response on the traffic and infrastructure implications of developing the original sites, at Sections 3, 20 and 24.

In terms of the principle of development at the Martyrs Lane site: it is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being

considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entirely different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

In terms of affordable housing and local employers: it is accepted that the land east of Martyrs Lane is in close proximity to major employers, whose employees would benefit from affordable housing. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their location and land values. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Contributor Reference:** 02972/1/001  
**Customer Name:** Mr Richard Wilson

**Summary of representation:**

Objects to the proposal due to:

Loss of Green Belt leading to urban sprawl, especially in combination with Fair Oaks proposal.

Increased traffic on A320 and A245, exacerbating the health hazard to residents.

Overcrowding at Woking Station – already one of the busiest in the UK.

Lack of infrastructure planned to support such a large development e.g. schools. It would only serve to increase congestion and lower quality of life generally.

Better alternative options e.g. land around Worplesdon Station, to include retail and office development. The new school nearby could serve residents.

The Martyrs Lane proposal is outrageous given alternative better locations and health risks that development here could bring.

**Officer Response:**

Objection is noted.

Many of the issues raised in the consultation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including impacts on the integrity of the Green Belt; traffic impacts – particularly on the A320 and A245; and infrastructure provision (including public transport such as trains).

Areas around Worplesdon Station (as well as across the whole Borough) were assessed as part of the Green Belt boundary review – identified as parcels 16 and 17. Much of the area contains constraints to development, including land designated as Flood Zone 3, and as Site of Special Scientific Interest. The report found there was little scope to accommodate significant development without substantial adverse effects on landscape character. Following completion of the Green Belt and Sustainability Assessments, these parcels were not recommended for removal from the Green Belt. Full details can be found in the Peter Brett Report.

**Contributor Reference:** 02111/1/001  
**Customer Name:** Mr David Crowder

**Summary of representation:**

Supports the proposal but avoiding the Golf Course.

There would be less traffic disruption and overstressing of local services than that caused by building around Upshot Lane. Agrees with views expressed by Pyrford Neighbourhood Forum.

**Officer Response:**

Support noted.

Regarding the New Zealand Golf Course: as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Regarding traffic impacts:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding infrastructure provision:

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council continues

to work with infrastructure providers such as Surrey County Council and the Clinical Commissioning Groups to determine the capacity of existing infrastructure to accommodate future growth in the Borough, and to plan for new infrastructure where needed.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council have received a representation from Pyrford Neighbourhood Forum and the Council's response can be accessed for further information.

**Contributor Reference:** 02114/1/001  
**Customer Name:** Ms Susan Hobbs

**Summary of representation:**

Supports the proposal.

Large enough site to accommodate 1200 houses including affordable housing and Traveller pitches. Makes more sense to accommodate housing need in one place than dispersed across the Borough. There will also be space for shops, school, health centre etc.

Good access to M25 via A320, which would be easier to widen. This is better than exacerbating traffic to the south of Woking, which is already terrible (and will be worse once Hoe Valley school opens).

Close to major employers – a new neighbourhood would provide employment opportunities.

Clear of flood zone constraints.

Will help meet affordable and specialist residential housing requirements, and build all the houses necessary to fulfil Woking's housing and Traveller needs. Ten Acre Traveller Site proposal could be removed, and open up the East of Woking to Travellers.

**Officer Response:**

Support is noted. The merits as set out in the representation will weigh in the balance of considerations by Members.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

As set out in detail in Section 5 of the Regulation 18 Consultation Issues and Matters Topic Paper, the defined areas of the allocated sites where development will be required to be sited

are all in Flood Zone 1, where development is encouraged. There are therefore no advantages regarding flood risk associated with the Martyrs Lane site over the original proposed sites.

The merits of the Martyrs Lane site for affordable housing, specialist housing and Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Contributor Reference:** 02115/1/001  
**Customer Name:** Lesley Godbolt

**Summary of representation:**

Supports the proposal, particularly over the sites in Pyrford.

The road infrastructure around Martyrs Lane are wider and newer and can cope with increased traffic, versus the narrow, windy roads in Pyrford, where there would be an increase in accidents.

Pyrford has more heritage assets, which need to be taken into account as per NPPF rules. A new housing estate will inevitably block views and ruin heritage settings. Heavy traffic will also affect them with vibrations and pollution. A large estate will ruin the setting forever.

The bus services in Pyrford cannot cope with increased traffic and population.

The infrastructure in Pyrford does not have capacity for increase in traffic and population, versus the Martyrs Lane site where there is room to build new infrastructure.

Good access to M25.

There are many golf courses in the Borough, and we can spare the loss of New Zealand Golf Course.

**Officer Response:**

Support is noted. The merits of the proposal as set out in the representation will weigh in the balance of considerations by Members.

With regards to traffic impacts:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

With regards to heritage assets:

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD include robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are

situated. The adopted Pyrford Neighbourhood Plan will also add to this pool of planning policies which protect the heritage and landscape assets of the area.

With regards to public transport and other infrastructure:

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

In relation to bus services in Pyrford, new development coming forward at this location provides an opportunity to improve existing infrastructure, or provide new infrastructure. This could include the provision of better bus services or public transport routes such as cycle lanes and footpaths. The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Whilst there are a number of Golf Clubs in Woking, the loss of a sports and recreation facility would still have to be considered against the relevant policies of the Core Strategy. This is a matter that will be carefully considered by members in making their decision on the Council preferred safeguarding option.

**Contributor Reference:** 02116/1/001  
**Customer Name:** Mr Richard Davidson

**Summary of representation:**

Strongly supports the proposal.

Good economies of scale related to the use of one site to meet housing requirement, and provision of infrastructure such as water, waste and electricity. Easier to provide facilities such as a school and health centre.

Three of the areas within the site are not in use and are overgrown woodland. Planning permission has previously been granted and they have been used for dwellings in the past.

Opportunity to secure affordable housing, employment, infrastructure and minimise traffic in original sites' areas.

Martyrs Lane represents the option with the lowest overall negative impacts and the greatest positive impacts.

**Officer Response:**

Support is noted and the merits of the proposal as set out in the representation will weigh in the balance of considerations by Members.

It is recognised that there may be economies of scale in relation to infrastructure provision. However, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings, and unused areas. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The conclusions of two studies assessing the landscape and Green Belt contribution of this area of land concluded that development of this site would lead to urban sprawl and an incursion into the Green Belt. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Mr Paul Cozens

**Summary of representation:**

Objects to proposals to build on the Green Belt in Woking; but if any Green Belt development is absolutely essential and completely unavoidable then Martyrs Lane is more appropriate than the original six sites that were proposed.

The Green Belt is a vital part of the environment and highly valued by residents. Majority of residents do not support building on the Green Belt and strongly disagree with the Council's approach. The Conservative Council should respect the Conservative Government which emphasises the protection of the Green Belt from development.

The Council should prioritise development on previously developed land. A full and proper review of brownfield/empty and underused buildings has not been carried out. This should happen before commissioning consultants to review the Green Belt. The Council seems to be directing most of its efforts to selecting Green Belt sites. Any Green Belt review should only take place once all brownfield land is exhausted and no empty properties remain.

The Council should not be attempting long term housing need forecasts due to the uncertainty of future housing needs, the economy and fluctuating immigration levels. Even short term projections could prove inaccurate. Only a ten-year plan is needed, with a five-year rolling supply. Longer term projects should be paused until the effects of Brexit are more certain. Site allocations beyond 2027 are not appropriate and unnecessary.

Proposals are stating numbers far in excess of 550 houses that is stated need to be on Green Belt land. West Hall alone has this capacity. There should be no need for Green Belt land if other areas are properly addressed.

Concerned about the process leading to permission to release a degree of Green Belt land. Was unaware of previous consultations regarding this, including any publicity about it. Explain which processes took place and how. This needs impartial and independent scrutiny.

The original Byfleet sites are inappropriate because:

1. In previous reviews Byfleet has been identified as inappropriate for any further major development;
2. Flooding issues, expounded by the only means of exit being via Parvis Road, which is congested and close to maximum permitted pollution levels;
3. Limited size and capacity for housing given the constraints from the floodplain and water;
4. The sites border floodplains, and the vegetation therefore plays a vital role in reducing groundwater levels – removal of trees will increase pressure on the floodplains. Environment Agency has identified the Sanway area of Byfleet as at very high risk of flooding.
5. The availability of land (as the landowner is willing to sell) has been prioritised over and above the sustainability of the land;

6. The Byfleet Petition should be given more weight given the size of the response;
7. Together with West Byfleet and Pyrford sites, there is an overconcentration of development in this area (putting pressure on local infrastructure such as roads, schools and GPs) and loss of Green Belt in one general region.

Concern about lack of infrastructure and funding of infrastructure to support the level of housing required.

Broadoaks in West Byfleet as a previously developed site is a reasonable location for some level of development. If all brownfield sites and empty buildings are exhausted, and all the above points have been fully addressed, Martyrs Lane is more suitable than original six sites. However, the level of development should be minimised and maximum green space retained. There are also open spaces in the surrounding areas, whereas this is not really the case with the original sites. Martyrs Lane allows access and exit on to different areas rather than concentrating traffic on just one road. Traffic issues may be mitigated by greater access to the north and south of the site, and avoid all traffic being concentrated onto one small area, unlike the original sites. Martyrs Lane does not have flood issues.

Strongly objects to large-scale development in Byfleet or loss of Byfleet green spaces.

**Officer Response:**

The objections to development on Green Belt land are noted; as is support for the proposal to substitute the six original sites with one site at Martyrs Lane if unavoidable.

The Council agrees that the Green Belt is a vital part of Woking's environment and is highly valued by residents. In response to the Regulation 18 consultation on the draft Site Allocations DPD, the Council prepared an Issues and Matters Topic Paper (available on the Council's website) which addresses many of the issues raised in the representation in detail, including:

- the justification around releasing Green Belt land to meet future development needs of Woking beyond 2027 (i.e. over and above the 550 new homes required between 2022–2027), and how the approach was reached in line with the National Planning Policy Framework issued by the Government, and in line with the Government's commitment to housing delivery (Sections 1 and 2);
- why it is necessary to safeguard sites for development beyond 2027 (Section 2);
- how the Council has conducted a full review of brownfield sites, including empty buildings, in advance of identifying Green Belt sites (Sections 1, 11 and 16) and how all reasonable alternatives have been considered (Section 9);
- how the decision was reached to permit the release of Green Belt land by the independent and impartial Core Strategy Examination Inspector (paragraph 1.6–1.12).

The Inspector recommended the release of Green Belt land for housing development at the Core Strategy Examination. The Core Strategy was prepared over a number of years, and went through various stages of production, including several rounds of consultation on the draft document (in 2009, 2010, and 2011) and an Examination in Public took place over five days in

March and April 2012. The Council was concerned to ensure that public involvement was central to the Core Strategy preparation process, and took into account comments received at each consultation stage. The Inspector concluded that the Core Strategy had been prepared in accordance with Woking's Statement of Community Involvement, and all relevant regulations dictating consultation requirements.

The issues concerning the specific Byfleet sites have been addressed as part of the Regulation 18 consultation process, and further details can be found in the Issues and Matters Topic Paper, particularly:

- Section 5 setting out how flood risk has been assessed;
- Section 13 on how the ownership status of land has no bearing on whether it is released from the Green Belt;
- Section L on how the allocation of sites for development is not evenly spread across the Borough;
- Sections 3 and M on how existing infrastructure has been assessed;
- Section T on how the Byfleet petition has been taken into account.
- Section 3, 20, V and U on how the developments will impact on local transport networks.

Land at Broadoaks, Parvis Road, was allocated for development in the draft Site Allocations DPD and this remains the case. This is not one of the sites being consulted on in this particular exercise. The merits of the Martyrs Lane site as set out in the representation are noted and will weigh in the balance of considerations by Members.

**Contributor Reference:** 02119/1/001  
**Customer Name:** Ms Wendy Quintal

**Summary of representation:**

Supports the proposal. It will provide greater economy of scale to address the many infrastructure issues concerning the original six sites, as well as incorporating community services such as health centres and schools.

**Officer Response:**

The merits of the proposal as set out in the representation are noted and will weigh in considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02122/1/001  
**Customer Name:** Shereen Hussein

**Summary of representation:**

Supports the proposal.

The site is large enough to accommodate 1200 houses including affordable housing, along with the necessary infrastructure required. Housing in one location can be served by the same new services e.g. doctors' surgery, school etc. New residents are unlikely therefore to put pressure on existing facilities.

Good proximity to motorways and to Woking Train Station. Good bus and cycle routes to detract from using cars, and to access employment and education facilities.

Good employment opportunities nearby e.g. St Peter's Hospital, McLaren, Woking Town Centre, West Byfleet Town Centre.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Accessibility to the M25 and to the Town Centre is noted, although there will be traffic implications along the connecting roads that will need to be mitigated. The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots, such as the A320. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the

A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless, policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. The six other sites as demonstrated in the Officers' response to the Regulation 18 Consultation also meet the policy CS1 test to some degree.

**Contributor Reference:** 02125/1/001  
**Customer Name:** Ms Maryam Mirghaemi

**Summary of representation:**

Objects due to:

- 1- Heavy traffic on existing roads
- 2- Loss of trees and woodland
- 3- Loss of Green belt
- 4- Lack of public transport
- 5- Pressure on the hospitals in the area
- 6- Impact on wildlife

**Officer Response:**

Objection is noted.

The Woodham and Horsell Neighbourhood Forum Issues and Topic Paper addresses in detail the points raised in the representation, including traffic implications, impact on landscape and wildlife, impact of loss of Green Belt, and public transport provision. It also sets out how the Council ensures that development is supported by the necessary social, physical and green infrastructure. This includes health infrastructure – the Council is updating its Infrastructure Delivery Plan and is working with the Clinical Commissioning Groups to determine how the capacity of local health facilities – such as St Peter's Hospital – may be affected by future development. This work is ongoing.

**Contributor Reference:** 02130/1/001  
**Customer Name:** Mr James Snelgrove

**Summary of representation:**

Supports the proposal (although ideally no Green Belt land would be used).

Certain Members of the Council have bowed to the pressure of Burhill Estates who have been trying to sell the fields in Pyrford for decades, and pushed the fields to the top of the list for removal from the Green Belt. This is despite an independent report declaring these fields are the least suitable in the area to be built on. Decisions are financially motivated. The files for Martyrs Lane were hidden and should have been considered initially.

Green Belt land in Pyrford is actively used by walkers, runners, cyclists etc and has beautiful views over the Surrey Hills. This is not the case at the Martyrs Lane site.

Significant new development proposals in the Pyrford and West Byfleet areas will put a strain on existing infrastructure, without a further population increase.

Parts of the Martyrs Lane site are previously developed.

One site will allow economies of scale with infrastructure provision (roads, schools, doctor surgeries etc).

The New Zealand Golf Course does not need to be built on.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The decision to safeguard particular sites in the draft Site Allocations DPD is well evidenced. Section 10 of the Regulation 18 Consultation Issues and Matters Topic Paper provides a detailed account of the Green Belt boundary review procedure, and how the Members of the Local Development Framework Working Group were satisfied it had been prepared in accordance with the brief, and that it provides useful evidence to inform the DPD.

The Peter Brett report did actually recommend that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the

exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Officers did in fact consider parts of the Martyrs Lane site in the early stages of DPD preparation. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. As noted above, the Green Belt boundary review, as well as the landscape assessment conducted by Hankinson Duckett, concluded that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

In 2016, a change in circumstances relating to planning approval at the McLaren site west of the A320 prompted Members to reconsider land to the east of Martyrs Lane as an alternative site for future development. The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. Detailed reasons were put forward by Members of the LDF Working Group, and are available on the Council's website. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all

reasonable options have been assessed. The conditions attached to the latest planning approval at the McLaren site west of the A320 (PLAN/2014/1297) presented a change in circumstance to justify the Martyrs Lane consultation. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding.

The Council recognises that there may be economies of scale in providing certain infrastructure. However, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the New Zealand Golf Course in the proposal: as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Contributor Reference:** 02133/1/001  
**Customer Name:** Mr David Bailey

### **Summary of representation:**

Supports the proposal in favour of development in Pyrford:

- Upshot Lane fields are useful long term farmland and contribute to the areas distinctive character and landscape.
- Green Belt report said that Parcel 9 has very low suitability for removal from the Green Belt, and shows 'major environmental constraint'.
- The Martyrs Lane site will provide greater potential for further expansion than Pyrford, which is more prone to suffer overcrowding and severe congestion.
- The Green Belt land in Pyrford provides well used facilities for walkers, joggers and cyclists.
- Land values are higher in the Pyrford area compared with Martyrs Lane, thus the latter will make the provision of low cost housing more viable, providing homes for essential local workers.
- The area North of the NZ Golf club is partly derelict, it has had deserted Army buildings and junk on it for many years.
- Senior WBC planners have no concerns that development of the Martyrs Lane site will harm the Green Belt.
- It does not seem that the golf course needs to be included in the development, in any event the land generally is under Minor Environmental Constraint.
- The Martyrs Lane site is in a better location for the provision of suitable infrastructure, that could include healthcare and educational facilities. Those in the Pyrford area are currently overstretched.
- It also likely to add less to traffic congestion than the Pyrford site.

### **Officer Response:**

Support is noted.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites, including those in Pyrford, are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation (i.e. the constraints and landscape quality). Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. It is therefore not correct to assume that Officers believe that development at Martyrs Lane will not harm the Green Belt.

If developed in the future, the Martyrs Lane site will in fact have limited potential for further expansion due to environmental constraints e.g. the floodplain to the north of the site, the presence of Horsell Common SPA and SSSI to the west of the site, and an SNCI to the east of the site. Land surrounding the site would also remain in the Green Belt, which would limit the possibility of further development.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. In addition, the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to

assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Summary of representation:**

Supports the proposal.

Parts have been previously developed, unlike originally proposed sites;

Good access to A320 and M25, which offers better opportunity to improve road access than the already congested A245;

Economies of scale regarding infrastructure provision through the use of one larger site;

Green Belt land in Pyrford has high amenity value, being accessed by walkers, runners and cyclists;

The fields in Pyrford are material to the setting of the area and its heritage value and rural character, and an important boundary and setting for the southern approach to the Woking area;

Pyrford's fields have been farmed for centuries and include good quality agricultural land, and are protected by policy CS24.

**Officer Response:**

Support for the proposal is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst the Martyrs Lane site has good access to main roads, the traffic impacts of such a proposal need to be considered. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The merits of the proposal as put forward in the representation are noted and will weigh in the balance of considerations by Members. Nevertheless, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage and landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage or landscape assets of the area.

Design policies of the Development Plan for the area would require development proposals to take into account the surrounding features of the area that are valued by local residents.

Whilst the Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites, including those in Pyrford, are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter. The Council appreciates that the fields in Pyrford are valued by its local residents for the part they play in contributing to the rural character of the area, but the Green Belt review took these issues into account when coming to its recommendations.

The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The representations on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02653/1/001  
**Customer Name:** Mr Ron Dawes

**Summary of representation:**

Supports the proposal.

The site is large enough to accommodate 1200 houses, including affordable housing, and the necessary infrastructure of shops, primary schools, health centre, etc. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

It will simplify the process for obtaining planning permission.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking town centre and the mainline railway station to the south without encountering the traffic delays where roads cross railway lines. Bus routes and cycle routes, including to Woking town centre, exist already. This is a better proposal than the option of building south of Woking where the A320 is often at a standstill in the morning rush-hour and that is before the new Hoe Valley School has opened.

Suitable to accommodate one or more Gypsy and Traveller sites, to replace Ten Acres. This would allow Travellers to live East of Woking. Almost all other pitches are at the South West side of the Borough. Any Traveller site would satisfy the Council's Core Strategy (2012), CS14, Gypsy and Traveller pitch criteria.

Although in the green belt, the site has no other national or local landscape designation unlike Mayford and Pyrford sites.

Most of the site is clear of Flood Zone 2 and 3.

Much of the land is disused and derelict.

Planning permission has been granted previously, resulting in a presumption for development.

Would provide accommodate for employees of nearby major employers. A new neighbourhood centre here would also create new employment opportunities.

It is large enough to meet all the housing needs of the Borough up to 2040, but also well beyond the 2040 period.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes (nor any additional homes required beyond 2040). For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst development at the Martyrs Lane site would be directed to Flood Zone 1 land, this is also true of the originally proposed sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a

development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree. The merits of the possibility of providing a new neighbourhood centre are noted, and will weigh in the considerations by Members.

**Contributor Reference:** 03023/1/001  
**Customer Name:** Mr Graham Foat

**Summary of representation:**

The land has been used during WW2 as temporary housing and has sport facilities on site. This land should be strongly considered as this brownfield site should be used before greenfield land. It could be considered for housing development before 2027.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

The Council notes the landowners support for the site to be released from the Green Belt for housing development before 2027. At this stage of the process, the Council has identified a suitable amount of land to meet the development needs of the borough up to 2027. These sites are set out in the draft Site Allocations DPD. The purpose of this consultation is to inform the Council's decision on its preferred safeguarding option to meet future development needs between 2027 and 2040. The landowners support and the availability of the site for development will inform the Council's final decision in preparing the Site Allocations DPD for Regulation 19 consultation.

**Contributor Reference:** 02016/1/001  
**Customer Name:** The Woodland Trust

**Summary of representation:**

The Woodland Trust is the UK's leading woodland conservation charity, the Trust aims to protect native woods, trees and their wildlife for the future.

Ancient woodland is defined as an irreplaceable natural resource that has remained constantly wooded since AD1600. The length at which ancient woodland takes to develop and evolve (centuries, even millennia), coupled with the vital links it creates between plants, animals and soils accentuate its irreplaceable status. The varied and unique habitats ancient woodland sites provide for many of the UK's most important and threatened fauna and flora species cannot be re-created and cannot afford to be lost. As such, the Woodland Trust aims to prevent the damage, fragmentation and loss of these finite irreplaceable sites from any form of disruptive development.

The Trust is concerned about a site allocation included in the Woking Borough Council Site Allocations DPD as it could lead to the damage and loss of ancient woodland.

National Planning Policy Framework (NPPF) paragraph 118 states that "planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss."

Natural England's standing advice for Ancient Woodland and Veteran Trees<sup>1</sup> states:

"Trees and woodland classed as 'ancient' or 'veteran' are irreplaceable. Ancient woodland takes hundreds of years to establish and is considered important for its wildlife, soils, recreation, cultural value, history and contribution to landscapes."

The Housing White Paper published on 7th February 2017 further shows the government's intent to improve planning protections for ancient woodland. This revised protection reinforces the approach set out in paragraph 118 (as set out above) to restrict development of ancient woodland as to do so would be contrary to the National Planning Policy Framework presumption in favour of sustainable development (as set out in paragraph 14).

Section 40 of the Natural Environment and Rural Communities Act 2006 requires all public authorities (including LPAs), in exercising their functions to have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity.

Due to their longevity, ancient woodlands are more species rich, and are often refuges for specialist woodland species that struggle to colonise new areas. Development in ancient woodland can lead to long-term changes in species composition, particularly ground flora and sensitive fauna, i.e. nesting birds, mammals and reptiles. Majorly adverse impacts would occur as a result of the removal of large areas of woodland, much of which contains high quality, valuable trees, to make way for the construction of this proposal.

When land use is changed to a more intensive use such as in this situation plant and animal populations are exposed to environmental impacts from outside of the woodland. In particular, the habitats will become more vulnerable to the outside influences, or edge effects, that result from the adjacent land's change of use. These detrimental edge effects can result in changes to the environmental conditions within the woodland and consequently affecting the wood's stable conditions. Detrimental edge effects have been shown to penetrate woodland causing changes in ancient woodland characteristics that extend up to three times the canopy height in from the forest edges.

Creation of new areas of woodland or buffer zones around semi-natural habitats, and more particularly ancient woodland, will help to reduce and ameliorate the impact of damaging edge effects, serving to improve their sustainability. The size of the buffer is dependent on the intensity of land use in the intervening matrix between ancient woods.

Natural England's standing advice for Ancient Woodland and Veteran Trees states:

"Impacts of development nearby can include these effects on the trees and woodland, and the species they support:

- o compacting the soil around tree roots
- o breaking up or destroying connections between woodland and other habitats
- o reducing the amount of semi-natural habitats (like parks) next to ancient woodland
- o changing the water table or drainage
- o increasing the amount of pollution, including dust
- o increasing disturbance to wildlife from additional traffic and visitors
- o increasing light pollution
- o increasing damaging activities like fly tipping and the impact of domestic pets
- o changing the landscape character of the area."

Development must be kept as far as possible from ancient woodland, with a buffer area maintained between the ancient woodland and any development boundary. An appropriate buffer area will depend on the local circumstances and Natural England recommend "leaving an appropriate buffer zone of semi-natural habitat between the development and the ancient woodland or tree (depending on the size of development, a minimum buffer should be at least 15 metres)."

The size of a number of the site allocations suggests that large scale development could potentially take place. The minimum 15m buffer recommendation to all development is not effective in ensuring that ancient woodland within and/or adjacent to site allocations is not affected by potential future development. Buffers should be constructed on a case-by-case basis rather than a 'one size fits all' approach.

The Trust is concerned about the potentially adverse impacts that the proposed site allocations will have in relation to areas of ancient woodland within and/or adjacent to site allocations. Ancient woodland should not be included in areas that are allocated for development, whether for residential, leisure or community purposes as this leaves them open to the impacts of development.

The Woodland Trust objects to the inclusion of the below site allocation in the Woking Borough Council Site Allocations DPD as it is likely to cause damage and/or loss to areas of ancient woodland and wood pasture within or adjacent to its boundary. For this reason we believe the site below is unsound and should not be taken forward. Secondary woodland should also be retained to ensure that ecological networks are maintained and enhanced.

#### **Officer Response:**

The Council is aware of the existing designated Ancient Woodland towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

The nature and type of some of the surveys that will be required to accompany any development proposals will be undertaken at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

Environmental organisations such as yourself, Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into

account to inform decisions about the preferred approach to safeguarding and how the potential integrity of the land can be protected.

The Council will work constructively with the Woodlands Trust to identify the necessary buffer to support development of the land if it is allocated and/or developed. This will be dealt with at the Development Management stage.

**Contributor Reference:** 01987/1/001  
**Customer Name:** Mr Nick Cockburn

**Summary of representation:**

Objection to development on the fields in Pyrford at Upshot Lane as the impact of the additional housing planned will have a very detrimental effect on the area. The primary school is already over capacity and will not be able to handle the demand from additional families and the road infrastructure is not able to handle the additional housing either. Pyrford should remain a village and the green belt land that surrounds it is essential in maintaining the character of the environment.

There are other sites more suited to the development in the area including the disused airfield at Wisley which has good road links for the A3/M25 and the proposed location at Martyrs Lane which doesn't have such an impact on the countryside and has been deemed to have a higher suitability rating than Upshot Lane in the Brett Woking Green Belt report.

Brownfield sites should be considered as a priority over greenbelt as per the NPPF instruction.

**Officer Response:**

Objection to Pyrford site and support for Martyrs Lane noted.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary

review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following

key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The representation regarding Green Belt, infrastructure, local character and brownfield sites have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Please note the airfield at Wisley is outside of Woking Borough and therefore cannot be considered or allocated for development by Woking Borough Council.

**Contributor Reference:** 01990/1/001  
**Customer Name:** Mr R S Newberry

**Summary of representation:**

Strongly support the substitution of the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet the long term future development needs of the borough between 2027 and 2040.

The development of the land in the Upshot Lane area of Pyrford would not only remove a valued part of the Green Belt but would increase the traffic problems on the B367. People living in the Upshot Lane area would naturally use this road as a route through to the A3 and the M25. This road was never intended for heavy traffic and there is a particular problem with the narrow entry of Newark Lane into the village of Ripley.

**Officer Response:**

Support noted and in terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of

additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding Green Belt, infrastructure and local character have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01994/2/001  
**Customer Name:** Mrs Marie Craig

**Summary of representation:**

Objects strongly to the proposed seizure of fields both sides of Upshot Lane and land at Martyrs Lane including New Zealand Golf Course for building, as three and four thousand new homes in the Pyrford/West Byfleet area have not been officially stipulated and that just over one thousand are needed. The Upshot Lane fields are productive land bordered by hedgerows supporting wildlife. Between them is a narrow road already burdened by heavy traffic which should be saved.

New Zealand Golf Course would yield a huge number of dwellings. The Martyrs Lane site is on the fringe of our established communities. It is somewhat derelict land serving little purpose. The Waste Tip would be maintained.

There is scope to widen Martyrs Lane itself to cope with the additional cars that the new residents would bring and additional essential amenities such as a first school, doctor's surgery, bus route could be included without adding to the pressure of the surrounding area.

All things considered, I think building on the Martyrs Lane site would be best.

**Officer Response:**

The Core Strategy states that between 2010 and 2027 the Council will facilitate the delivery of at least 4964 dwellings across the borough. As part of the Site Allocations DPD process, the Council is also seeking to safeguard land in the Green Belt for development needs between 2027 and 2040 of at least 1200 dwellings. The Council's Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 1.0 and 2.0, sets this out in more detail.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford site is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

In terms of wildlife, the constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. These policies would apply to any of the proposed safeguarding sites.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

In terms of Golf Course, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the

Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council is not intending to remove the recycling centre and the social and environmental implications of the recycling centre will be fully assessed as part of the development management process, and appropriately mitigated.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of public transport currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary

infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy.

**Customer Name:** Mr Alan Somers

**Summary of representation:**

Objection to developments on Green Belt lands, particularly the fields adjoining Upshot Lane, Pyrford. If development is truly necessary, then it should be restricted to Brownfield sites, and not until all brownfield sites have been developed should there be consideration of any greenfield sites.

Martyr's Lane site is Green Belt land with extensive brownfield elements. If such a single site needs to be considered for development, it should be only after all other brownfield sites have been developed, incurring whatever clean-up costs the developers may have to face at their own expense.

The Martyr's Lane site should be used before any other Green Belt site could ever be considered. Only 1024 houses are required and that only the Martyr's Lane site north of Golf Club is needed.

Objection to any development of the Pyrford fields Green Belt lands.

**Officer Response:**

Support and objection to any development of the Pyrford fields Green Belt lands is noted.

The representation regarding Green Belt land and brownfield sites has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Customer Name:** Mr Neill Morrison

**Summary of representation:**

Objection to development on Pyrford Fields and prefers for development to be centralised in the Borough on the Martyrs Lane site identified as an alternative.

As per advice provided by the Pyrford Neighbourhood Forum, the site is preferred because the Martyrs Lane site is on Green Belt land, some of which has been previously developed, which is not true of the other proposed sites. The A245 through West Byfleet & over M25 bridge has virtually no capacity left, especially when other new development in the area is taken into account. The "economies of scale" of developing a single site and would help to find solutions to many of the infrastructure concerns. Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough. The Heritage features of the area which incorporates the two Pyrford fields includes the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area. Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'. Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

**Officer Response:**

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to

expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

In terms of roads, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If

any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This Pyrford site is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

The representation regarding the development impacts in Pyrford such as those on amenity and landscape, have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02023/1/001  
**Customer Name:** Mrs Kathy White

### **Summary of representation:**

Objects to building on Green Belt sites in Pyrford. The Broadoaks site a mile down the road has been granted permission to build 117 houses and a School and this will add to the already congested roads. This will also impact on the Health Centre in Madeira Road which is already overstretched.

### **Officer Response:**

The representation regarding the impact of development in Pyrford including that on the Green Belt, infrastructure and medical facilities, has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Mrs Carole Baker

**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, Traveller accommodation and the necessary social and community infrastructure needed to support it. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

Masterplanning of the site would allow for the provision of affordable housing which is needed in the Borough as the Council is currently not meeting its targets. The site would also be able to accommodate specialist residential accommodation for older people and vulnerable groups.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and not in Flood Zone 1 and 3 and is flat and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

The site could provide Gypsy and Traveller accommodation for those wishing to live in the east of Woking. All sites are currently in the southwest of the borough. This would also meet the requirements of Policy CS14 and meet Woking's current and future Traveller accommodation needs. Ten Acre Farm, Smarts Heath Road and Mayford, (GB7) Traveller site proposal in the Schedule 18 consultation can therefore be removed as a Traveller site proposal. The site is suitable for Gypsy and Traveller pitches and would comply with Policy, no significant policy constraints in that the site and it is not within an international environmental designation and the site does not compromise the objectives of nationally recognised designations. Will be able to form a community and have shared interest complying with the Designing Gypsy and Traveller Sites – A Good Practice Guide (2008),

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

The representation relating to planning application reference PLAN/2011/0823 for McLaren Technology Centre has been noted. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of the planning history of the site as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would

only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the representation that one site will simplify the development management process, the Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development irrespective of the location of the preferred sites or their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the

safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

Development at either the Martyrs Lane site or the multiple sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Whilst the representation considers the site to be located on stable and flat ground, an investigation of the ground conditions of the land will always be a pre-requisite of the development of a site, regardless of whether it is the land to the east of Martyrs Lane site or the six original sites. These pre-development studies will make sure that existing ground conditions are appropriately assessed and where necessary for development to be planned to take it into account.

The Council has robust policies in place to ensure that any land contamination is fully assessed and remediation measures are undertaken prior to development taking place. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett

considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

It is correct that the land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. It is acknowledged that there is an Ancient Woodland towards the northern part of the site and this will be protected as part of any development of the site if the land were to be safeguarded. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the

Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

It is important that all development across the borough is fully integrated into the local community. This is set out in Core Strategy Policy CS1: A spatial vision for Woking Borough as well as the reasoned justification to support the policy. In design terms, the Council has a number of policies and guidance that new development will be required to meet that will help create sustainable communities.

It is accepted that the land east of Martyrs Lane is in close proximity to some major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Regarding road infrastructure, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding representation 13 on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 02001/1/001  
**Customer Name:** Kristine Gorton

**Summary of representation:**

Objects for a number of reasons including the loss of precious green belt land; increase of traffic volume on already congested roads; both impacting on air quality, noise & quality of life. Increased demand on services infrastructure, like doctors, trains, schools, parks & woodland areas, shops, library. Loss of village character of Woodham, West Byfleet and others. Undesirable urbanisation through increase in population density.

**Officer Response:**

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

In terms of local congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of the development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

In terms of the issues raised such as loss of Green Belt, character and increase in population, these issues have already been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 1.0, 7.0 and 23.0 for the Council's response.

**Contributor Reference:** 02006/1/001  
**Customer Name:** Mr Andrew Yeo

**Summary of representation:**

Support the substitution of Martyrs Lane for the following reasons; the site is large enough (112 hectares) to accommodate 1,200 houses, including affordable housing, one or more Gypsy and Traveller sites, and the necessary infrastructure of shops, primary schools & health centre. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities. It will also simplify the process for obtaining planning permission.

The A320 provides easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre and the mainline railway station to the South. Bus routes and cycle routes, including to Woking Town Centre, exist already. There is little development along the A320 North of Woking, making road widening easy to achieve. This is a better proposal than the option of building South of Woking where the A320 is often congested. The new Hoe Valley School and associated Leisure Facilities Centre will further adversely increase traffic congestion.

Martyrs Lane would be suitable to accommodate one or more Gypsy and Traveller sites allowing for the removal of the Ten Acre Farm Traveller site (GB7). Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking in Heathlands Ward (Mayford), restricting Gypsy and Traveller choice as to where they can live. The Gypsy and Traveller sites would be sustainable as they would be within the residential development site. Martyrs Lane Travellers sites would satisfy the Council's Core Strategy (2012), CS14, Gypsy and Traveller pitch criteria, as follows:

- o It would have safe vehicular access from the highway and have adequate space for parking provision and turning areas.
- o It would have adequate amenity for its intended occupiers, including space for related business activities, and Green space for children.
- o It would be designed so as not have unacceptable adverse impacts on the visual amenity and character of the area.
- o It would have adequate infrastructure and on-site utilities to service the number of pitches proposed.
- o It would have safe and reasonable access to schools and other local facilities.
- o It would promote integrated co-existence between the pitches and local community.

Any development of Gypsy and Traveller pitches would link in with other broader strategies in place which together deliver housing, pitches, and other uses, services and Green infrastructure in the most appropriate way. Pitches could be designed with the recommended privacy, security and space provisions, whilst the overall residential development could provide open-space and playground facilities.

Gypsy and Traveller pitches within the residential development would also enable residents to:

- o Seek or retain employment
- o Attend school, further education or training
- o Obtain access to health services and shopping facilities.

The Martyrs Lane site is in the Green Belt, but it has no other National or Local landscape issues such as those in Mayford. There are no Escarpment and Rising Ground Landscape Importance issues such as those faced in GB10, GB11 and GB13.

Most of the site is clear of Flood 2 and Flood 3 designations which should make the planning and development process simpler and more cost effective. Much of the land is largely disused and derelict. Planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Housing at Martyrs Lane would provide accommodation for employees of major companies operating close by, St Peter's Hospital, the Animal and Plant Health Agency, McLaren Technology Centre and the Brooklands Retail Park. A new Martyrs Lane Neighbourhood would provide additional employment opportunities for residents.

The Martyrs Lane site is almost twice the size as the six sites it would replace. It should therefore be possible to build all the properties necessary to fulfil Woking's future Housing and Traveller needs up to 2040 but also provide a handsome margin for any additional housing needs that may arise well beyond the planned 2040 period.

#### **Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport

and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

In terms of flooding, given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft

Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

In terms of local congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various

development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of public transport infrastructure currently serving the vicinity of the Martyrs Lane area is relatively limited. However, this would equally be true for most of the other six safeguarded sites. Access to rail stations by public transport from the various sites has already been dealt with above. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. It would therefore be necessary for the Council to work with providers to improve service provision and frequency, in particular the 592 if this site were to be safeguarded for future development. As emphasised above, bus services serving the other six safeguarded sites are also relatively limited and their development would equally require measures to improve services in these areas.

A key thrust of the transport policies of the Core Strategy and the NPPF are to influence a shift from car based travel to sustainable travel modes such as public transport, walking and cycling.

The overall spatial strategy of the Core Strategy is to concentrate most new development at the main centres because they offer a range of key services and facilities to help minimise the need to travel and to encourage sustainable travel modes. Specific references are made to Policies CS1: A spatial strategy for Woking Borough and CS18: Transport and accessibility of the Core Strategy which clearly demonstrate the importance that the Council places on encouraging walking and cycling. These policies have been scrutinised at Examination and judged to be in conformity with the NPPF. In addition to the policies of the Core Strategy, a key objective of the Council's Parking Standards is to use parking provision as a tool to encourage walking and cycling, in particular, at locations where key services and facilities are readily available without undermining economic vitality. Policy CS18 of the Core Strategy makes this point very clear.

**Customer Name:** Ms Suzanne Heaney

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford) to meet long term future development needs of the borough between 2027 and 2040.

**Officer Response:**

Support noted

**Contributor Reference:** 02011/1/001  
**Customer Name:** Mr Stewart Collins

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The representation considers, the points raised on the "NoWoodhamNewTown" website and conclude that the single Martyrs Lane site is far preferable to the scattered alternatives previously included in the draft DPD. This is not only for economies of scale but also because there are far better opportunities for improving access and connections to Martyrs Lane than for the already over-congested alternatives.

Objections raised on the "NoWoodhamNewTown" website are primarily against any additional housing development in the area, and most points apply equally to alternative sites. Some points are factually incorrect, such as claiming that 3500 homes are planned and that the New Zealand golf course is to be included.

Adding more than 1000 homes anywhere within the borough will exacerbate existing congestion problems. Only the Martyrs Lane site may minimise the adverse impact as it is on the outskirts of the main population. Much of the traffic may be directed away from the centre. Infrastructure improvements and increased capacity can be realised at Martyrs Lane that would not be practicable elsewhere within more central areas. These include health care and school provisions, plus high speed broadband connections which may encourage working from home and thus reduced commuter traffic.

**Officer Response:**

The representation is correct to state that 3500 homes are not planned for the site. However, the Golf Course is included within the development boundary. The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting

their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure including education, broadband and healthcare provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 02013/1/001  
**Customer Name:** Mr Alan John Small

**Summary of representation:**

Objections to the proposed development of the fields either side of Upshot Lane, Pyrford because, the two fields either side of Upshot Lane are part of the landscape of Pyrford and must be preserved if the unspoilt semi-rural character of Pyrford is to be maintained. These fields have been farmed for centuries and have never been built on. They are still used to produce crops for either animal feed or bio fuels. The Martyrs Lane site has no current use at all.

The land around the medieval St. Nicholas Church and the escarpment along Warren Lane and Church Hill are believed to represent one of Surreys last remaining examples of natural beauty in a farming setting. The historic wooded grounds of Pyrford Court are Grade 2 listed, and a Conservation Area covers Pyrford Village. Pyrford Common is designated as a site of Nature Conservation Interest. Aviary Road Conservation Area, the network of ancient footpaths and the two fields either side are integral to the setting of the area.

The Martyrs Lane Site would provide economies of scale, making it easier to resolve infrastructure issues like water, waste and electricity. There would be less disruption to residents and traffic than would be incurred at the Upshot Lane Site. Land values at the Martyrs Lane Site are less than at Pyrford, and would therefore facilitate the provision of Affordable Housing.

There are three major employers close to the Martyrs Lane Site namely McLaren, Animal and Plant Agency and St. Peter's Hospital, whose employers would benefit from new housing in the vicinity.

The Martyrs Lane Site has the benefit of main road links. Chertsey Road to Woking and in the other direction to Chertsey and the M25, giving easy access to both Heathrow and Gatwick Airports. There is access to Shearwater and West Byfleet via Woodham Lane, and the existing roundabout at the northern end of Martyrs Lane gives access to the A320.

Pyrford Junior School is already fully subscribed. The Martyrs Lane Site would provide an ideal opportunity to build a new school and health centre as part of the Martyrs Lane development Plan.

**Officer Response:**

Support of Martyrs Lane site and objection to building on Pyrford Green Belt are noted.

In terms of heritage and assets, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the

sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This site in Pyrford is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

In terms of character of Pyrford this has already been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 7.0 and 23.0 for the Council's response.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

In terms of local congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02014/1/001  
**Customer Name:** Mr John B Chester

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

It makes much more sense to use this land as it will not have some much environmental and social impact as it would if you decided on the Pyrford sites. Green Belt should be saved and not developed upon. The Martyr's Lane site already has some development on it and should be used instead. Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance', and Pyrford Green Belt is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

**Officer Response:**

Support of Martyrs Lane site and objection to building on Pyrford Green Belt are noted. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the Pyrford escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

The social and environmental implications of the development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

In terms of the issues raised about the Pyrford site such as Green Belt, character and public amenity these issues have already been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', please refer to section 1.0, 7.0 and 21.0 for the Council's response.

**Contributor Reference:** 02021/1/001  
**Customer Name:** Mr Michael Adams

### **Summary of representation:**

This site is unsuitable for the following reasons; it has not been part of the proper consultation as required. It should not be treated as an individual consultation the whole DPD should be re-issued for consultation. Responses to the original consultation were made on the whole plan they are now void. The site is within the green belt and is unlikely to become available. There is no evidence that the site will become available.

There is no infrastructure to support this site and is partly in the floodplain. WBC officers reports suggest this site is unsuitable and it is not ideal to only agree one site in case this does not materialise and more smaller sites are more easily integrated.

### **Officer Response:**

The consultation concerns the approach the Council should take with regards to safeguarded sites to meet future development needs between 2027 and 2040. It was appropriate and proper for the Council to carry out the consultation exercise. National planning policy requires an assessment of all reasonable alternatives before preferred options are identified. The availability of land is a significant consideration but not the only consideration. The overriding consideration in this regard is to identify the most sustainable land when compared against all other reasonable alternatives. The information that is gathered from the representations is useful evidence to inform the Council's decision on the matter.

The regulation 18 Consultation responses have been taken into account and can be viewed on the Council website. All the points from Regulation 18 Consultation are still valid and will be used to inform the Regulation 19 version of the Site Allocation DPD.

Availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. The land east of Martyrs Lane is in multiple ownership, and the New Zealand Golf Course and McLaren collectively owns a significant proportion of the land.

Paragraph 182 of the NPPF deals with examination of local plans. It requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- o Should be deliverable over its period;
- o Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the

footnote, its relevance should be seen in the context of the details of the representations received from the owners of the land.

The New Zealand Golf Course has written to the Council and has made formal representation as part of the consultation to confirm that the part of the land that is in its ownership will not be made available now, in the future and never to meet future development needs. In this regard, there is no expectation for a change in their position within and beyond five years. The representations from the New Zealand Golf Course are addressed in full separately.

McLaren Technologies Group Limited has also made representations. Whilst it would generally support in principle the release of the land from the Green Belt, it would only allow its land holding to be used as a strategic employment site to support its own future expansion programme. McLaren will not allow its land to be used as envisaged in the consultation. If the Council were to decide not to release the land east of Martyrs Lane from the Green Belt, McLaren have provided reasons why its land should be designated as a Major Developed Site in the Green Belt. The representations from McLaren has been addressed in full separately.

The lack of availability of the above sites could cast doubt on the deliverability of the land if it is safeguarded. To put it into context, assuming the two sites will not be available to meet future development needs and the Surrey County Council's Waste Safeguarded Site is also not available, the residual land will only deliver about 300 dwellings (at 30 dph) as against the 1,200 dwellings that the Council wish to safeguard land. If the Waste Safeguarded Site is made available, there will be sufficient land to enable the delivery of about 600 dwellings at the same density. This is still significantly short of what is needed. Importantly, the Council has to make sure that any land that it safeguards would not lead to an isolated development within the Green Belt.

It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

In terms of infrastructure, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of flooding, Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Based on the above, it is not envisaged that the occupants of the development on the site would face unacceptable risk of flooding.

In terms of the Council's reports, the Council has carried out two relevant Green Belt studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Summary of representation:**

Objection to the proposed development on either side of Upshot Lane, Pyrford. Loss of beautiful Green Belt land and lack of infrastructure to support the proposed dwellings. It is difficult to get appointments at the health centre in West Byfleet. The local school is oversubscribed and the roads are over crowded.

**Officer Response:**

Objection to development in Pyrford is noted. The matters raised in the representation regarding reasons against development in Pyrford have been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Customer Name:** Mr Richard Lea

**Summary of representation:**

Supports the proposal. This large site would be more economical to develop than several small sites separated by some distance.

Understands that brownfield land has been assessed, and that housing targets will probably only be achieved using Green Belt land. However, use of Green Belt land should be judiciously considered, especially where it results in urban areas merging to a point where the identity of settlements is lost, such as that in Westfield and Old Woking, Knaphill and Horsell. The Core Strategy only identifies the villages of Mayford and Brookwood as remaining.

Martyrs Lane site would not merge villages as it would only border Sheerwater and to a lesser extent Woodham. These villages are already joined. If GB10 and GB11 were to be developed, it would merge Mayford with Hook Heath; GB4 would infill Byfleet; GB5 expand Byfleet; GB12 an infilling of Pyrford and GB13 an expansion of Pyrford.

Benefits of Martyrs Lane site are:

Good access to A320 and A245 with links to M25. Existing sites access onto country lanes, in-town roads or onto B roads.

Opportunity for new infrastructure to be delivered to support development, reducing overall costs, rather than overstretching existing infrastructure.

Greater opportunity and flexibility for affordable homes and Traveller accommodation.

Unlikely to have adverse impacts on surrounding water table. Development on the Hook Heath escarpment would affect the area below and on the flood zone in and around the Hoe stream and surrounding heathland and SSSI.

Fewer existing residents will be affected.

**Officer Response:**

Support for the proposal is noted.

The Council has judiciously considered the use of Green Belt land, as suggested in the representation. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt. In contrast, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references regarding merging and urban sprawl, made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced, and the Council is confident that the overall integrity and purposes of the Green Belt would be sustained.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

The Regulation 18 consultation Issues and Matters Topic Paper further addresses the concerns in the representation, including Section 12 on merging settlements; Section 15 on urban sprawl; and Section 23 on preserving general character of areas.

The benefits of the proposal at Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

Although the site benefits from good accessibility, a development of this scale would lead to traffic impacts. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

Section 5 of the Regulation 18 consultation Issues and Matters Topic Paper provides a detailed explanation regarding the suitability of sites according to their susceptibility to flood risk, and how flood risk elsewhere is not exacerbated. Given the location and size of all the land under consideration, a detailed flood risk assessment will be a requirement of any development proposal on sites that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development on any of the sites under consideration.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the

impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Objects to the originally proposed sites – particularly Pyrford sites.

Objects due to traffic, which is already a nightmare and very dangerous. Even over the last 10 years there is now a constant flow of traffic which disregards speed limits and people drive too fast.

There are no facilities to cater for more development in Pyrford.

**Officer Response:**

The details raised in the representation are addressed in detail in the Regulation 18 consultation Issues and Matters Topic Paper, particularly Section 3 on infrastructure, and Section 20 on the Transport Assessment. Section U also sets out a detailed response to concerns about congestion on existing roads and the danger it poses.

**Customer Name:** Mrs Jennifer Grayson

**Summary of representation:**

Supports proposal excluding golf course, in favour of developing on Pyrford fields.

**Officer Response:**

Support is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Officer Response:**

The Council's response can be found in the Duty to Cooperate Bodies Topic Paper.

**Contributor Reference:** 01962/2/001

**Customer Name:** Mr Ray Jones

**Summary of representation:**

The representation is dismayed at the proposed developments of the Pyrford Fields and strongly feels, it must be protected.

The alternative proposal to develop part of land adjoining Martyrs Lane, if needed at all ,is a more reasonable compromise provided necessary infrastructure is also planned.

A single site at Martyrs Lane would provide a better economy of scale on the infrastructure requirements and provision of Health facilities, necessary school, road access and affordable housing.

**Officer Response:**

Objection to Green Belt development in Pyrford is noted.

The Council is fully committed to the comprehensive delivery of the Core Strategy. In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy.

The merits of the Martyrs Lane site as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane or the six other sites. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 01923/2/001

**Customer Name:** Mr David Bell

### **Summary of representation:**

Supports the development at Martyrs Lane as the alternative to the other six sites of the consultation will adversely increase the traffic flows through West Byfleet, Old Woking Road, Parvis Road, and Byfleet Road, which are already heavily congested.

The development at Martyrs Lane provides much shorter and ready access to the J11 of the M25, if some improvement is carried out to the short section of Guildford Road.

In addition, it would be possible to provide a green garden access by foot and cycle path into Woking centre (similar to the access for non-road traffic around Milton Keynes) as Woking provides the better rail links to London, compared to West Byfleet and Byfleet and New Haw stations which are slow connection and constricted by parking issues.

### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

A key thrust of the transport policies of the Core Strategy and the NPPF are to influence a shift from car based travel to sustainable travel modes such as public transport, walking and cycling. Specific references are made to Policies CS1: A spatial strategy for Woking Borough and CS18: Transport and accessibility of the Core Strategy which clearly demonstrate the importance that the Council places on encouraging walking and cycling. If this site or any of the six sites are safeguarded the Council will look into adding foot and cycle paths.

**Customer Name:** Mr Alan Fleming

**Summary of representation:**

Insufficient plans provided to address the required infrastructure to support development.

**Officer Response:**

The representation regarding infrastructure provision has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 01976/1/001  
**Customer Name:** Mr Graham Baker

**Summary of representation:**

Agree to the possibility of substituting the land east of Martyrs Lane.

The site is big enough (112 hectares) to accommodate 1,200 houses, including affordable housing, one or more Gypsy and Traveller sites, and the necessary infrastructure of shops, primary schools, health centre etc. There are advantages of one larger site than several dispersed smaller ones. It is easier to create the necessary infrastructure rather than overload the existing over stretched facilities. It will also simplify the process for obtaining planning permission.

Masterplanning will allow for the provision of affordable housing. The current targets are not being met. The site could also provide specialist residential accommodation.

The site could be used to provide pitches for Gypsy and Traveller accommodation in the east of Woking. Currently all other pitches are in the south west of the borough. The site has no significant policy constraints, it is not within an international environmental designation and the site does not compromise the objectives of nationally recognised designations.

The other physical constraints. Flooding is not high risk and can be mitigated, it is stable land, the site is not located on contaminated land which cannot be mitigated, it has good road access and in reasonable proximity to local services and facilities. In addition, development and use of the site will not have an adverse impact upon the Green Belt, landscape nor biodiversity which cannot be mitigated, the site is not subject to unacceptable noise levels nor is it likely to give rise to unacceptable noise levels and the site will have a good residential environment and will not adversely impact upon neighbouring residential amenity.

Gypsy and Traveller pitches would be suitable by virtue to being within the residential development site which itself would be sustainable. There is mean of access, transport modes and reasonable distances from services, promotion of integrated pitches and the local community, easy access to healthcare provision, close to bus routes, shops and schools, suitable ground conditions and levels and on a site that has low risk of flooding.

The site would satisfy the policy requirements of Core Strategy Policy CS14 and could be designed in accordance with Designing Gypsy and Traveller Sites – A Good Practice Guide (2008).

The site could provide open space and playground facilities and would enable residents to seek or retain employment, attend education and obtain access to health and shopping facilities.

Integration of traveller pitches would encourage a greater sense of community with shared interests.

The site would meet Woking Traveller accommodation need up until 2040, thereby removing Ten Acre Farm as a Traveller site in the Site Allocations DPD.

There are major employers close by and a new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is in Flood Zone 1 with flat and stable ground. It would make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

#### **Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

The representation relating to planning application reference PLAN/2011/0823 for McLaren Technology Centre has been noted. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of the planning history of the site as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the representation that one site will simplify the development management process, the Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development irrespective of the location of the preferred sites or their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a

sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

Development at either the Martyrs Lane site or the multiple sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Whilst the representation considers the site to be located on stable and flat ground, an investigation of the ground conditions of the land will always be a pre-requisite of the development of a site, regardless of whether it is the land to the east of Martyrs Lane site or the six original sites. These pre-development studies will make sure that existing ground conditions are appropriately assessed and where necessary for development to be planned to take it into account.

The Council has robust policies in place to ensure that any land contamination is fully assessed and remediation measures are undertaken prior to development taking place. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Council has undertaken a number of landscape and Green Belt studies to inform the Site Allocations DPD process. The Council's latest evidence carried out by Hankinson Duckett considered the Martyrs Lane site specifically and came to the conclusion that the site is of critical importance in its contribution towards the purposes of the Green Belt, with its important contributions to the purpose of preventing urban sprawl and the safeguarding of the countryside. The report also noted that the site is of critical importance to the landscape character of the wider area. In addition, the Council's Green Belt boundary review assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The reports can be found on the Council's website.

It is correct that the land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. It is acknowledged that there is an Ancient Woodland towards the northern part of the site and this will be protected as part of any development of the site if the land were to be safeguarded. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and

Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

It is important that all development across the borough is fully integrated into the local community. This is set out in Core Strategy Policy CS1: A spatial vision for Woking Borough as well as the reasoned justification to support the policy. In design terms, the Council has a number of policies and guidance that new development will be required to meet that will help create sustainable communities.

It is accepted that the land east of Martyrs Lane is in close proximity to some major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Regarding road infrastructure, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding representation 13 on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 01980/1/001  
**Customer Name:** Mrs Elizabeth Wild

**Summary of representation:**

Objects to development for the following reasons

Pyrford Green Belt has been farmed for centuries unlike the Martyrs Lane site.

Pyrford Green Belt is an important part of Green Belt. Should not erode Green Belt and should reuse previously developed land.

Not persuaded that the area needs 1024 dwellings.

There is no need to develop the New Zealand Golf Course. Such a large development would be detrimental to traffic.

One large development at Martyrs Lane would be more efficient and environmentally manageable than several sites.

Public services such as health and education provision are likely to be overburdened.

**Officer Response:**

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

The Council is of the opinion that it has made the case for releasing Green Belt land, including safeguarding land to meet future development needs, and this has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. As part of the Site Allocations DPD process the Council considered about 125 sites in total. The full list of these sites and their individual assessments have been set out in the Sustainability Appraisal. Section 11.0 of the Regulation 18 consultation Issues and Matters Topic Paper sets this process out in more detail.

Regarding the representation relating to the need to safeguard land for 1024 dwellings, this has been addressed in Section 2.0 of the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the Martyrs Lane site is of a significant size, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The environmental implications of the allocating any of the proposed sites will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of

communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

**Contributor Reference:** 01982/2/001  
**Customer Name:** Mr Andrew Barnes

**Summary of representation:**

The whole of the borough is subject to extreme traffic congestion, especially the Six Crossroads roundabout and the A245 towards West Byfleet. To concentrate all future development on one site as opposed to spreading it over the six other sites would contradict the need to minimise congestion further.

Development would be contrary to the 1999 Local Plan for the area, which include the protection of Horsell Common SSSI, the importance of the Green Belt and the amenity value of the New Zealand Golf Course. This matters are still relevant today. Horsell Common is already overused to the detriment of its ecology and further development will make the situation worse.

Woking Borough Council evidence base documents recommend against development in this part of the Green Belt.

The air pollution associated with the A320 and A245 would be exacerbated to the detriment of the local environment and wildlife habitats.

Local infrastructure will not be able to sustain a development of this size. Existing facilities are inaccessible other than by private transport. The local schools are not within the borough boundary.

The existing bus service is inadequate.

**Officer Response:**

The Council is aware of local concerns regarding traffic and road congestion. As addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, the Council has undertaken a number of transport studies to assess the impact of the safeguarded sites on the road network. Please refer to the topic paper for further detail.

It should also be noted that the Council has robust transport policies in place to influence a shift from car based travel to sustainable travel methods such as public transport, walking and cycling. This includes Core Strategy Policy CS18: Transport and accessibility which clearly demonstrates the importance that the Council places on encouraging walking and cycling. As part of the Site Allocations DPD process, the Council undertook a Sustainability Appraisal (SA) to identify the most sustainable sites for development. This assessment considered about 125 sites in total and each sites' accessibility to existing services and facilities were part of the overall assessment. The SA can be found on the Council's website.

It should be noted that the Local Plan (1999) has now been superseded by the Core Strategy (2012) and the Development Management Policies DPD (2016). Nevertheless, the Council has a number of policies that address the issues noted in the representation. In particular, Policy CS7: Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the Thames Basin Heaths SPA and SAC is avoided as a result of development. As part of the consultation process, the Council has consulted with Natural England, Horsell Common Preservation Society and Surrey Wildlife Trust. Their representations will be taken into account and addressed separately. The representation regarding wildlife has also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Core Strategy Policy CS6: Green Belt and Development Management Policy DM13 also provide robust policies to ensure that the Green Belt continues to serve its fundamental aim and purpose, and maintains its essential characteristics. These policies also ensure that it will be protected from harmful development. The Council has previously addressed the need to release Green Belt land for future development needs in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Sections 1.0 and 2.0.

Core Strategy Policy CS17: Open space, green infrastructure, sport and recreation notes that these areas are highly valued by local people and provide opportunities for people to participate and enjoy sports and recreation and to facilitate effective access to the countryside and the amenity that it offers. As part of the consultation process, the Council has consulted with Sport England and their representation will be taken into account and addressed separately.

The representation regarding the Hankinson Duckett Associates Report has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The environmental implications of the proposal, including air pollution, will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

The representation regarding the impact of the proposal on infrastructure, including cross boundary implications, and the existing bus service have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 01925/1/001  
**Customer Name:** Mr Allen Taylor

**Summary of representation:**

Supports the proposal for safeguarding land at Martyrs Lane for future development needs.

Martyrs Lane is more suited to massive redevelopment. Pyrford sites are not suited due to severe traffic delays already experienced in the area.

Oppose any development in Pyrford.

**Officer Response:**

Support for the Martyrs Lane site and objection to development in Pyrford is noted.

The Council has addressed the transport implications of development in other parts of the borough, such as Pyrford, in the Regulation 18 Consultation Issues and Matters Topic Paper.

Whilst the representation is unclear as to why Martyrs Lane is more suited to massive redevelopment, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding traffic implications of safeguarding land at Martyrs Lane for future development needs, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 01926/1/001  
**Customer Name:** Mr Steve Henshall

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for future development needs but considers the number of homes to be too large for the local infrastructure. The location of the site is much better than the previous six sites.

The scale of development should be less.

**Officer Response:**

Support for the Martyrs Lane site is noted.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the representation on the amount of development, the purpose of the Martyrs Lane consultation was to inform the Council's decision on its preferred safeguarding strategy. The overall capacity of the six original sites is broadly similar to the anticipated capacity of Martyrs Lane. If the Council were to safeguard Martyrs Lane for less than 1200 dwellings, then the Council could be required to identify more Green Belt land to meet the identified housing need.

**Customer Name:** Saad Abdul-Rassak

**Summary of representation:**

Pyrford does not have the infrastructure to support such expansion

**Officer Response:**

The Council notes the representation outlining reasons against safeguarding land for future development needs in other areas of the Borough. This will be taken into account to inform the preferred approach to safeguarding.

Further details can be found in Officers' Response to the Regulation 18 Site Allocations DPD consultation.

**Contributor Reference:** 01933/1/001

**Customer Name:** Milo Gaster

**Summary of representation:**

I object to the plans to safeguard the green belt land areas in Byfleet, West Byfleet and Pyrford for future housing developments.

Green Belt land should be free from any kind of development what so ever.

**Officer Response:**

The Council notes the representation outlining reasons against safeguarding land for future development needs in other areas of the Borough. This will be taken into account to inform the preferred approach to safeguarding.

Further details can be found in Officers' Response to the Regulation 18 Site Allocations DPD consultation.

**Contributor Reference:** 01936/1/001  
**Customer Name:** Mr Eric Butterworth

**Summary of representation:**

Agrees to the to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocation DPD (in Byfleet, Mayford and Pyrford), to meet the long term future development needs of the Borough between 2027 and 2040.

However, does not wish the New Zealand Golf Course to be considered for development as believes that there is sufficient land within the designated area to meet the housing need without developing any of the golf course land.

Whilst the Martyrs Lane site is within the Green Belt a precedent was set by permitting the development of the McLaren's factory within the Green Belt adjacent to the proposed site. Furthermore, the existing infrastructure for this site is far better than the alternative sites which are already at maximum capacity.

**Officer Response:**

Support for the Martyrs Lane site is noted.

McLaren have made representations to confirm that their land holdings within the site area will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

It is acknowledged that part of the site as well as the adjacent McLaren site were granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Customer Name:** Mr And Mrs Richard And Tara Bowling

**Summary of representation:**

Objects to development of Pyrford fields and supports Martyrs Lane for future development needs.

There is a lack of infrastructure in Pyrford, notably the size of Upshot Lane and Coldharbour Road which is at capacity already. There is no space in Pyrford to develop the necessary infrastructure.

**Officer Response:**

Objection to development in Pyrford and support for Martyrs Lane is noted.

The Council has addressed the representation on infrastructure and in particular the road network and congestion in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01944/1/001  
**Customer Name:** Mr And Mrs David And Judith Meredith

**Summary of representation:**

Objects to development in Pyrford as it is already over built and over concentrated with cars and traffic.

The Martyrs Lane proposal offers the opportunity of a more self supporting community which would have less impact on the wider community.

**Officer Response:**

Support for the Martyrs Lane site and objection to development in Pyrford is noted.

The Council has addressed the representation regarding development in other areas of the borough, including Pyrford, in the Regulation 18 consultation Issues and Matters Topic Paper. In particular the matters relating to the impact of development on local character and traffic and congestion.

The merits of the Martyrs Lane site as set out in the representation are noted and will weigh in the balance of considerations by Members. Nevertheless to ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 01948/1/001  
**Customer Name:** Ms Natalie Smeaton

**Summary of representation:**

Martyrs Lane can provide a viable direction for housing growth as it has the capacity rather than overloading the areas encompassed by the six original sites.

**Officer Response:**

Support for the Martyrs Lane site is noted.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding site capacity, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Customer Name:** Mr Colin Watson

### **Summary of representation:**

Supports the views of the Pyrford Neighbourhood Forum. Their analysis of the consultation is balanced and reasonable as it reflects the overall impact of the 2 options, the benefits and disbenefits and the risks and potential opportunities and losses of the Martyrs Lane site compared to the six original safeguarded sites.

In addition, concerned at the overall impact of development on Pyrford Village. The greatest is the impact of additional traffic as the existing road network is at capacity, dangerous and environmentally harmful. It also leads to congestion at West Byfleet traffic lights.

If new homes are needed they should be put where the traffic infrastructure can meet the extra demand – that is not the case in Pyrford.

Pyrford Green Belt should remain undeveloped.

The NPPF states that brownfield land should be used before Green Belt. If exceptional circumstances exist then this should apply to the Martyrs Lane site.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

**Officer Response:**

Support for the Martyrs Lane site is noted.

As addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- Woodham Court (SHLAAHEW006);
- Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 - 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 - 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes

shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach,

the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council has also previously addressed traffic and congestion issues relating to development in other parts of the borough, including Pyrford, in the Regulation 18 consultation Issues and Matters Topic Paper. This is available on the Council's website.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services

serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Contributor Reference:** 01955/1/001  
**Customer Name:** Mrs Alexandra Clare Elbourn

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

The site contains some previously developed land which is not true of the other sites.

The A245 through West Byfleet and over the M25 is at capacity especially when other new development is taken into account. This will deteriorate further with housing in Pyrford and Byfleet.

Safeguarding one site would mean economies of scale and would help to find solutions to the infrastructure concerns.

The Pyrford Green Belt has amenity value as it is used for recreational uses.

The Green Belt in Pyrford is an integral part of the heritage setting of the area. The sites are surrounded by heritage assets and features.

The Pyrford landscape is protected by Woking Core Strategy policy CS24 as an 'escarpment and rising ground of landscape importance'.

The Green Belt in Pyrford has been farmed and is good quality agricultural land. They are an important contribution to the rural character of the area and setting for the southern gateway into the town.

People live in Pyrford because of its semi-rural character. Development would reduce the quality of life for residents with increased road congestion and further strain on already stretched infrastructure.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

Regarding the representation on heritage value, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close

to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

In addition, as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

**Contributor Reference:** 01958/1/001  
**Customer Name:** Mr Peter Jagger

**Summary of representation:**

The Martyrs Lane site is larger and able to contain more housing development. It also has the ability to include shops and other facilities without reducing the number of dwellings on the site.

It is in a good location for easy access to the motorway network and airports. It will restrict further traffic congestion in the town centre. There is the opportunity to easily improve the road network north of Woking.

There are a number of employment opportunities in the local area.

The A320 south of Woking is already congested and the development of the Hoe Valley School will make the situation worse.

**Officer Response:**

Whilst the Martyrs Lane site is larger than the six original sites, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding the representation on the provision of facilities and infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The representation relating to transport infrastructure and congestion in other parts of the borough has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01959/1/001

**Customer Name:** Mrs Kay King

**Summary of representation:**

Wishes to express support for Martyrs Lane and objection to Pyrford development.

Development in Pyrford:

Would ruin the historic escarpment

The village has insufficient infrastructure to cope with additional cars

There are not enough school places in the primary school

It will put pressure on historic sites by increasing traffic flow on adjacent narrow roads

Wildlife will be put under pressure, the fields form part of the village eco corridor and should be protected in the interests of native species of wildlife.

Martyrs Lane can accommodate development and will provide an opportunity to build a new primary school and health centre.

The six original sites can remain as Green Belt

If fully landscaped, then the site could be an attractive housing area and blend in with existing housing provision.

**Officer Response:**

Support for the Martyrs Lane site and objection to development in Pyrford is noted.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The representations relating to reasons against development in Pyrford have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular the impact of development on landscape, infrastructure including the road network, wildlife and heritage assets.

In addition to the Issues and Matters Topic Paper, the Peter Brett Green Belt Boundary Review recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation on landscape and the escarpment. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant

containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on the provision of infrastructure the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy, Development Management Policies DPD and the Design SPD include robust policies and guidance to make sure that the design of development that will come forward on the safeguarded sites is of high standard and sympathetic to the general character of the area, irrespective of whether the Council safeguards a single site or multiple sites.

Should the Council safeguard land to the east of Martyrs Lane for future development needs, that the Council will amend the Green Belt boundary to reflect this allocation and the six original sites will be retained within the Green Belt. However it should be noted that the

overriding objective of this particular consultation is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

**Contributor Reference:** 01960/1/001  
**Customer Name:** Mr And Mrs Brian And Carmela Strong

**Summary of representation:**

Agrees to the proposal of safeguarding the land to the East of Martyrs Lane for future development needs.

The site is more able to cope with additional traffic due to the close proximity of major roads. The road network in West Byfleet is already at capacity.

Martyrs Lane contains previously developed land.

Pyrford Green Belt is used for recreational purposes. The Green Belt in Pyrford is an integral part of the heritage setting of the area. The sites are surrounded by heritage assets and features.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding. Nevertheless neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in

close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Additionally the Council has addressed the representation regarding amenity and well being and heritage assets in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02970/1/001  
**Customer Name:** Ms Rachael Wilds

**Summary of representation:**

Objects to development proposals in Pyrford based on the following reasons.

The road infrastructure is not sufficient to cope with additional traffic and the existing road network is at capacity. Development will make the situation worse.

The sites are Green Belt and many local people moved to the area for the semi-rural character of the area and in the knowledge that it would remain as Green Belt.

It is an historic site with the Pyrford Stone adjacent.

The public footpaths would be affected in terms of rural walks.

The semi-rural character of the area would be lost as well as the views.

Additional traffic will be detrimental to the character of the area.

The lifestyle and quality of life for residents will be lost.

Preference to develop land north of the New Zealand Golf Course. It would have minimal impact on the surrounding area as there are few dwellings near by. With the Council refuse disposal site near by, it would have less impact on the life, well being and living standards as developing in Pyrford would have.

The road infrastructure will be able to cater for additional traffic. Therefore the impact on existing residents in the area will be far less severe as the site is out of sight with few residential roads nearby and it has good access to main roads.

**Officer Response:**

Support for the Martyrs Lane site and objection to the Pyrford sites are noted.

The Council notes the representation outlining reasons against safeguarding land for future development needs in Pyrford. This will be taken into account to inform the preferred approach to safeguarding. The representations relating to traffic and congestion, the impact of development on character and landscape, amenity and well being have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the representation on heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The Council is fully committed to the comprehensive delivery of the Core Strategy. The Core Strategy sets out the Council's case for the release of Green Belt land for development needs and is considered to be consistent with national planning policy. The focus for this particular consultation therefore should be whether the proposed safeguarding of land for future development needs is the most sustainable when compared against other reasonable alternatives. The Council has carried out a number of evidence base documents to underpin the Site Allocations DPD process including the Green Belt boundary review. These documents are all available on the Council's website.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

Whilst the representation notes that development could be accommodated in the northern section of the site, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the impact of the proposed Martyrs Lane allocation, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

**Contributor Reference:** 01964/1/001  
**Customer Name:** Mr Geoffrey H Parsons

**Summary of representation:**

Support the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040. Some of the reasons for this are as follows:

It is on previously developed land which is not true of the other proposed sites.

The Infrastructure in the other sites such as A245 through West Byfleet & over M25 bridge has virtually no capacity left, especially when other new development in the area is taken into account.

Safeguarding one site for the future housing needs of Woking would probably mean "economies of scale" and would help to find solutions to many of the infrastructure concerns.

The Amenity value of the Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

The Heritage features of the area which incorporates the two Pyrford fields includes the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.

The Landscape in Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance.

The Agriculture of Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs

Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% (excluding Martyrs Lane site) of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The references to landscape is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed

nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

In terms of the issues raised about the other sites proposed such as Green Belt, infrastructure, character, traffic congestion, these issues have already been addressed in the 'Regulation 18 Consultations Issues and Matters Topic Paper', please refer to section 1.0, 3.0 and 7.0 for the Council's response.

**Customer Name:** Mr Robert Holmes

**Summary of representation:**

Support for the Martyrs Lane site.

The site was assessed in 2012 and judged to have no risk to merger and sprawl. Much of the land is previously developed after and during the Second World War.

The site has little or no amenity or landscape value. Pyrford sites were identified in the Green Belt boundary review as being in category Major Environmental Constraint and having little or no capacity for change and low capacity for change.

The site would meet the Borough's needs for 1024 dwellings on safeguarded land at a single location. This would provide economies of scale in building and simplify the provision of essential services to the new dwellings.

A major employer in the area is St Peter's Hospital. This site would provide affordable housing for lower paid staff at the hospital, with convenient public transport links.

The site is adjacent to the A320 which has access to Woking town centre and the M25. Whilst it is congested, it can easily be upgraded as it runs through open country with minimal disruption to existing housing. The roads in Pyrford on the other hand pass through built up areas.

The site would allow for the provision of schools, medical and leisure facilities rather than adding pressure on the existing facilities in Pyrford and Byfleet.

Martyrs Lane can provide a viable direction for WBC housing expansion as the area has capacity unlike the other areas of the borough.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

The case officers comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The representation on amenity value has also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the site area is significantly larger than the six original sites, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to all allocated development sites. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 01966/1/001  
**Customer Name:** Mr George Trow

**Summary of representation:**

Supports the proposed safeguarding of Martyrs Lane for future development needs.

The Green Belt in Pyrford is used for recreational purposes.

The Pyrford sites are good quality farming land that can be used for many centuries.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council has addressed the representation on amenity and well-being in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

**Contributor Reference:** 01967/1/001

**Customer Name:** B D Harmer

**Summary of representation:**

Has been made aware that there is a possibility of development still being considered on land either side of Upshot Lane.

Strongly object to the proposal. This will increase traffic which is already at capacity and there is no suggestion of additional community services being put in place. There are already capacity issues with West Byfleet Health Centre.

Martyrs Lane is a better solution for development, especially as there will be access to the main Woking road.

The sites in Pyrford should remain as Green Belt.

**Officer Response:**

The purpose of the land to the east of Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding option. In particular, that the most sustainable sites are identified when compared against all other reasonable alternatives.

The representation regarding transport infrastructure has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Regarding the road accessibility merits of the Martyrs Lane site, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Site Allocations has been prepared to facilitate the comprehensive delivery of the Core Strategy. The Council is of the opinion that the case for releasing Green Belt land, including

safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. The focus for consideration for the DPD should be about ensuring that the proposed allocations are the most sustainable when compared against other reasonable alternatives.

**Contributor Reference:** 01968/1/001  
**Customer Name:** Mr And Mrs B E Wilson

**Summary of representation:**

The Martyrs Lane site is the only site large enough to include the necessary infrastructure needed to support development, especially education and social care. The roads are already wide enough and should be able to accommodate increase usage. The road network will also be able to support any new schools.

Observation that few people use the site for recreation.

The New Zealand Golf Course should be protected.

Green Belt in Pyrford is used for recreational purposes and has extensive views. The narrow road system is near maximum capacity. The area has no mains drainage and poor social infrastructure including medical facilities.

**Officer Response:**

Whilst the site area for Martyrs Lane is significantly larger than other sites, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The site currently contains Woodham Court and the New Zealand Golf Course, both of which are currently or have been recently used for recreational purposes. As such, the Council has consulted Sports England as part of the consultation. Their representations will be considered and addressed by the Council separately.

As set out above, the owners of the New Zealand Golf Course have confirmed that the site is not available for development. This will be considered by Members in identifying the Council's preferred safeguarding option.

The merits of the Pyrford Green Belt are noted and have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. This includes matters relating to landscape, amenity and well being and infrastructure provision.

**Contributor Reference:** 01969/1/001  
**Customer Name:** Mr And Mrs Ian Donaldson

**Summary of representation:**

Martyrs Lane would be the ideal site for new housing. Understands that only 1024 homes are needed and therefore there is no requirement to build on the New Zealand Golf Course. A single site would provide the opportunity to deliver the necessary infrastructure, including a health centre and school.

The six previous sites would be unable to support these key services as they are at capacity. By spreading homes across these sites, it would undermine the need to build further infrastructure.

**Officer Response:**

Support for the Martyrs Lane site is noted.

Whilst the Martyrs Lane site is significantly larger than the other sites, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 01970/1/001  
**Customer Name:** Carl And Linda Stead

**Summary of representation:**

Has seen a significant increasing pressure on local infrastructure in Pырford. Great increase in traffic through Pырford and a complete disregard to improve the road network in the area. This is made worse by increasing the school intake as parking becomes more of an issue.

More housing in Pырford and West Byfleet will make the situation worse. It will call for an expansion of already full schools which is not a feasible option. Therefore support the Martyrs Lane site which is near major roads and can meet the future housing needs. The site could accommodate a new school and health centre, relieving pressure on existing provision and build a road infrastructure that would connect to the other major roads in the area. This is a fair better solution.

A better solution would have been to develop new towns with an infrastructure to fit long term population growth rather than always lagging behind development.

Planners should finally start thinking of affordable housing. It can not be achieved by adding a few hundred houses near Pырford. High rise flats will be required but those sites do not exist in the local area. The Martyrs Lane site could accommodate this type of development.

**Officer Response:**

Representations highlighting the reasons against development in Pырford are noted. Matters relating to traffic and social and community infrastructure have been addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper.

Although the Martyrs Lane site is of a significant size, it should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the

waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst the suggestion of a new town is noted the Council, as part of the Site Allocations DPD process, has not to date identified any sites within the borough capable of accommodating a new town. For information, the Council has considered about 125 alternative sites in total and the outcome of their individual assessments can be found in the Sustainability Appraisal document.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at all of the allocated sites. The Council has carried out a viability

assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. It is therefore incorrect for the representation to suggest that the Council does not have mechanisms in place to facilitate the delivery of affordable housing.

It should also be noted that affordable housing is not limited to flatted developments and that affordable housing also comprises of family accommodation. The Kingsmoor Park development in south Woking is a recent example of affordable family housing being delivered in the borough.

The location of tall buildings, including high rise flats as suggested in the representation, will only be acceptable in specific locations in the Borough. Core Strategy CS1: A spatial strategy for Woking Borough states that in the town centre tall buildings may be acceptable as this location has the best access to services and facilities. Core Strategy Policy CS10: Housing provision and distribution states that in the Green Belt, development should achieve a density range of around 30 dwellings per hectare and therefore high rise flats are unlikely to be acceptable. The Core Strategy, Development Management Policies DPD and Design SPD all provide robust policies and guidance to ensure that development is of the highest standards and respects and enhances local character. This will be taken into account at the development management stage.

**Customer Name:** Ms Linda Pitkethly

**Summary of representation:**

Support for the Martyrs Lane site is noted.

Objects to principle of large scale development on green fields but feels that Martyrs Lane would be a better alternative to the other sites.

The infrastructure in the area has the capacity to cope with additional development and easier than land in Pyrford. Pyrford Green Belt has amenity, heritage and landscape value. The road network in Pyrford could not cope with additional traffic and road expansion plans would change the historic character of the landscape and ancient network of footpaths. It would also create grid lock in West Byfleet and Ripley.

Land values are lower in Martyrs Lane and therefore the site will be able to deliver more affordable housing. Development in Pyrford would only benefit developers.

**Officer Response:**

Support for the Martyrs Lane site is noted.

Whilst the Council notes the in principle objection to greenfield development, it is fully committed to the comprehensive delivery of the Core Strategy. This includes 4964 net additional homes between 2010 and 2027 as well as a significant amount of retail and commercial floorspace. Whilst most development will take place on brownfield land across the borough, the Council has made the case that some Green Belt land will be required to be released for development. This is set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding the amenity, heritage and landscape value of the Pyrford sites has previously been addressed by the Council. Again please refer to the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the road network, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation on character has also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01921/1/001

**Customer Name:** Mr Ian Joslin

**Summary of representation:**

The Martyrs Lane site is much closer to major transport links including the M25 and local employers such as St Peters Hospital and employment centres such as Reading, Bracknell, Slough, Staines and Heathrow.

It has no landscape designation unlike Saunders Lane.

The site is largely clear of flooding and much of the land to the north of the site is derelict and has no aesthetic value.

Permission has granted to develop the site, underlining development potential.

Due to the size of the site, a more structured and sensible building policy could be implemented to enable affordable housing and specialist older people accommodation. It could also include provision for Gypsy and Traveller sites as most of the existing sites are in south Woking.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a

sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

**Contributor Reference:** 01972/1/001  
**Customer Name:** Ms Stephanie Crowther

**Summary of representation:**

Supports the proposed safeguarding of Martyrs Lane for future development needs.

The site is partly previously developed land unlike the other six sites.

The A245 in West Byfleet and over the M25 has no capacity, especially when future development in the area is taken into account.

One site would deliver economies of scale and would help to find solutions to many of the infrastructure concerns.

Pyrford Green Belt is used for recreational purposes.

The Pyrford Green Belt is part of the heritage setting of Pyrford's historic setting.

Pyrford is protected by Policy CS24 as an escarpment and rising ground of landscape importance.

Pyrford's fields have been farmed for centuries and include good quality agricultural land. They also contribute to the rural character of the area and setting for the southern gateway into the town.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the overriding objective of this consultation is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, regardless of what sites are allocated. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. In addition the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

**Contributor Reference:** 01974/1/001  
**Customer Name:** Mr John Attrill

**Summary of representation:**

Objects to development in Pырford Green Belt.

The existing road network is dangerous due to volume and vehicle speeds. Development will make the situation worse.

The views over the local area are beautiful and unique, the development will have an adverse impact on local character.

Air pollution will have a negative impact on the environment.

The road network is congested and development will make the situation worse, blighting the lives of local residents. There is no room for expanding these roads due to development constraints.

The local schools and services are at capacity and unable to cope with an increased population.

Land to the north of the New Zealand Golf Course is more suitable.

It has access to main roads so will avoid hazards to pedestrians, cyclists and motorists.

No beautiful and unique views will be affected.

Easy access to main roads that lead to the M25.

The need for over 3000 dwellings is overstated and so the New Zealand Golf Course should be retained.

Based on the above, the reasons against development in Pырford are compelling and trust that the Council will act in the interests of the environment and local community and identifying a more suitable site such as Martyrs Lane or any other site.

**Officer Response:**

Support for the Martyrs Lane site and reasons for not safeguarding land in Pырford are noted.

The Council has addressed the matters relating to safeguarding land in Pырford in the Regulation 18 consultation Issues and Matters Topic Paper. In particular, the representations relating to road infrastructure and congestion, landscape and social and community infrastructure. In short, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Specifically regarding road infrastructure the Council has undertaken a number of transport studies in preparing the Site Allocations DPD. These studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The environmental implications of the allocations will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

As noted above, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

As set out in the Martyrs Lane Consultation Document, the anticipated capacity of the Martyrs Lane site is at least 1200 dwellings. This figure is broadly similar to the total capacity of the six original safeguarded sites. Whilst the Martyrs Lane site is significantly larger than the other sites, it should be noted that McLaren have made representations to confirm that their land

holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

**Contributor Reference:** 01019/4/001  
**Customer Name:** Mr Matthew Pink

**Summary of representation:**

Woodham Lane is already a very busy road along with the A320.

The extra capacity for doctors schools and hospitals for the thousands of people who may live there.

Objects to the building of Woodham New Town.

Recent experience with Runnymede Council, who did not listen to any of our concerns and went ahead and passed it. I hope Woking Council planning are better.

**Officer Response:**

The representation regarding traffic and congestion as well as infrastructure provision have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Objection to the proposal is noted.

The purpose of the Martyrs Lane consultation is to gather information from the representations to inform the Council's decision on the matter. All representations received will be considered by the Council and will, at Full Council meeting, inform the Council's decision on its preferred safeguarding approach.

**Contributor Reference:** 01882/1/001  
**Customer Name:** Mr Terry Tigwell

**Summary of representation:**

Supports the proposal.

The site is better served by roads e.g. the A320 being a main route from Woking to the M25, Chertsey, St Peters Hospital etc.

There is a direct link to Woking town centre via the A320, whereas the traffic from Saunders Lane route to Woking and the M25 would mean that all traffic would need to use Egley Road. This road is always very busy and with the development of the new School the traffic volume will be greatly increased.

The previous proposal for the Saunders Lane development was not at all suited to the local roads, Saunders Lane being very narrow and unable to take heavy volumes of traffic.

The Martyrs Lane site is large enough to accommodate Woking's total new housing requirements without the need to build on green belt land in the Mayford area. It is also large enough to accommodate the need for Travellers sites.

Martyrs Lane is handily sited for access to the large employers in the area, i.e. Brooklands Park, St Peters Hospital and Heathrow.

**Officer Response:**

Support is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Regulation 18 Consultations Issues and Matters Topic Paper also sets out detailed responses to transport impacts in relation to the original six sites, including those in Mayford – see Sections 3, 20, V and U.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers as set out in the Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that this will include pitches to meet the accommodation needs of Travellers .

At Regulation 18 stage, officers had recommended to Council that need for Traveller accommodation should be met at Five Acres and Ten Acres. That need is 19 pitches up to 2027. At the Council meeting, Members requested that officers revisit this recommendation and report to them before making a decision about their strategy for Regulation 19 consultation. Officers accordingly are investigating this matter and will be reporting to Council in due course.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 01892/1/001  
**Customer Name:** Ms Stephanie Snashall

**Summary of representation:**

Supports the proposal. Public access to Green Belt here is poor and less valuable in this area. There would be little adverse impact on the existing community. It would be a more economical project and would impact less on the environment. The infrastructure services can be developed from scratch.

**Officer Response:**

Support is noted and the merits of the proposal as set out in the representation will weigh in the balance of considerations by Members.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The Council has carried out two studies to assess whether releasing sites from the Green Belt will undermine the purposes of the Green Belt:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett

The studies conclude that development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt. The land thus has critical importance to the Green Belt.

It is, however, important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

There are potential environmental impacts associated with both the Martyrs Lane site – particularly being located near to the Horsell Common SPA and SSSI – and the six sites originally proposed. However, neither the land east of Martyrs Lane nor the six originally proposed safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

**Contributor Reference:** 01893/1/001  
**Customer Name:** Mr Keith Froom

### **Summary of representation:**

Objects to safeguarding the sites in Pyrford, therefore supports the Martyrs Lane proposal.

Martyrs Lane is a previously developed site. Pyrford's unique semi-rural setting is largely unspoilt with open views to the south. The fields form part of the escarpment. The sites have been farmed for centuries and emphasise the distinctive character of the area highlighted in the Pyrford Neighbourhood Plan.

Martyrs Lane's 3 sites to the north of the golf course are almost unused, partly pre-developed and derelict. There is no landscape element, no known footpaths and the public seem not to use it. The site benefits no one.

Planning permission has been granted for a factory in the northern section of the site. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. Although never developed this demonstrates that its viability as a factory stands and the building of houses is a viable alternative option, based on the reasons given for the McLaren planning permission.

The land also includes a former army camp, disused sports field and general debris. The SCC Waste Site has 7ha of derelict land to the rear. Both sites have been offered for development for several years now.

The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked. It is unacceptable that the six original sites were in the DPD when the previous use and availability of the Martyrs Lane site is considered.

There has been confusion regarding the number of dwellings required to be safeguarded. Only 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an

'EscarPMENT and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

The representations relating to heritage, local character, amenity and landscape have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

Regarding the representation on development viability, the Council through the preparation of the Core Strategy, Community Infrastructure Levy and Site Allocations DPD is confident that development at either of the proposed safeguarded options would achieve positive viability.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the

six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to

manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on the urban boundaries, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unhelpful to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Customer Name:** Ms Linda Oswick

**Summary of representation:**

Supports the proposal.

Understands the need for more houses that people can afford. The Martyrs Lane site is large enough to accommodate all the housing that is required, whilst providing the necessary infrastructure to support it. The redevelopment of several small sites would require duplication of infrastructure, and overwhelmed village facilities.

**Officer Response:**

Support is noted.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages – in terms of providing affordable dwellings – over each other.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council are continuing to work with infrastructure providers – such as Surrey County Council as transport and education authority and the Clinical Commissioning Groups – to ensure that existing facilities have capacity to accommodate future development; and if not, that additional facilities are provided.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Customer Name:** Mr Barry Sellick

**Summary of representation:**

Supports the proposal. Preserve heritage features of Pyrford.

**Officer Response:**

Support noted.

Whilst Officers accept that the landscape and heritage features surrounding the sites in Pyrford are highly valued, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by heritage constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy, the Development Management Policies DPD and the Pyrford Neighbourhood Plan include robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise these assets. This includes design policies, which ensure any new developments are designed and masterplanned in such a way that maintain the character of the area in which they are situated.

This issue is addressed in more detail in Section 19 of the Regulation 18 Consultation Issues and Matters Topic Paper.

**Contributor Reference:** 00649/2/001  
**Customer Name:** Mr David M Brighton

**Summary of representation:**

Objects to the proposal. Agrees with the objections made by the "No Woodham New Town" group and by Paul Rimmer of Horsell Common Preservation Society in his letter to the Council's planning officer dated 23 January 2017.

**Officer Response:**

Objection is noted. The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper sets out the Council's response to the issues raised by the Forum. See also the Council's separate response to the Horsell Common Preservation Society representations.

**Contributor Reference:** 01859/1/001  
**Customer Name:** Mr Peter Semon–Ward

**Summary of representation:**

Objects to the proposal because of:

1. Loss of Green Belt and its trees, woodland, wildlife and its habitat. Saddened if Council decides to replace the Green Belt and wooded land adjacent to Horsell Common SPA and SSSI, and SNCI. Would have a significant detrimental impact upon the environment: local wildlife populations due to loss of habitat but also increase in human intervention such as encroachment and introduction of other wildlife which would not prevail in such landscapes;
2. Transport: traffic on A320 is at breaking point – this would be exacerbated by new road users. The roads are major thoroughfares to the M25, M3 and A3 and when one or more are blocked which is an almost weekly (sometimes daily) occurrence they become bottlenecks and traffic grinds to a halt – this has a knock-on effect to local traffic and through traffic and also harms the environment with increased pollutants released into the atmosphere and increases risks to traffic accidents. This would have a negative effect upon the ability of Ambulances to reach accidents or ability to transport casualties to St Peters Hospital.
3. Public transport: there is insufficient public transport infrastructure to support additional housing. Limited bus services would not be able to serve the increase in population. Car parking would be under severe pressure. Woking Town Centre is already overcrowded and suffering traffic chaos, leading to negative impacts on local businesses and the economy. Woking and West Byfleet train stations would become more busy, creating pressure on car parking facilities. There may be detrimental impacts on local and residential parking on side streets; and more overcrowding on the trains to London.
4. Flood risk: building on land adjacent to the floodplain will lead to increased risk of localised flooding, which will then have a knock-on effect on wildlife and traffic.
5. The golf course has nature conservation value and offers recreational land health benefits. Where will an alternative open space be delivered?
6. The recycling plant is a key local facility which would become over-burdened by additional users; or be subject to pressure to be removed from the area. Any resident would object to having a recycling plant right on their doorstep. This facility should be protected for current users.

Also objects to the Council favouring certain areas at the expense of others – Pyrford, Mayford and West Byfleet have been seen to be given preferential treatment by the Council. The Council are driving wedges between communities and pitting them against each other.

**Officer Response:**

Objections as set out in the representation are noted and will weigh in the balance of consideration by Members.

Several issues raised in the representation are addressed in detail in the Horsell and Woodham Neighbourhood Forum Issues and Matters Response Topic Paper, including:

- how the loss of Green Belt land will affect the overall integrity of the Green Belt;
- the likely impact of the proposal on designated sites and wildlife, including wildlife within the site and on the golf course;
- the likely impacts of the proposal on the local transport network, and how traffic impacts would need to be mitigated;
- public transport infrastructure, including bus provision and accessibility to the Town Centre and railway station;
- the likely flooding implications of the proposal;
- concerns about the recycling centre;
- concerns about the decision of Councillors and perceived bias.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

Only one section of the golf course falls within the site, and it is unlikely that an entirely new golf course would be delivered in an alternative location. However, any proposal coming forward on this land would be expected to accord with Core Strategy policy CS17 on open space, green infrastructure, sport and recreation, which seeks to retain open space unless certain criteria are met.

Officers would emphasise that it was not the intention of the Council to create tension between communities of the Borough. The Council is required by Planning Regulations to consult with the local community on development plans for the area. This is set out further in the Council's Statement of Community Involvement (SCI) and the Site Allocations DPD consultation statement.

**Contributor Reference:** 01890/1/001  
**Customer Name:** Pauline De Marco

**Summary of representation:**

Supports the proposal, particularly in substitute of the sites in Pyrford.

-The northern section of Martyrs Lane green belt has is of no special significance and has derelict buildings on the site;

-Size of site allows for a large surplus of land for creation of new neighbourhood centre, health, educational and recreational facilities, thereby enhancing employment opportunities.

- Opportunity to provide great range of mix of dwelling types e.g. 1 and 2 bed flats, 2 and 3 bed houses, sheltered housing, disabled housing

- Sufficient surplus land to include landscape features thereby enhancing biodiversity.

- Maximum 3 storey development.

- Crime can be designed out by means of good surveillance.

- Able to redevelop tree nurseries and sports pitches in northern area of site.

- Good access to A320, M25 and Woking.

- Good bus service to Woking and St Peter's hospital.

- New Zealand Golf Course retained.

- Feasible to provide much needed affordable housing for rent and sale.

- Feasible to improve footpaths, cycle tracks and bus routes.

- The present derelict facilities can be designed out.

**Officer Response:**

The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings, which represents an opportunity for redevelopment. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt (and it is therefore wrong to say that the northern section of the site has no special significance, as it does in fact serve a critical purpose to the Green Belt). The Council's latest evidence carried out by Hankinson Duckett – a landscape assessment of the site which also looked at the northern part of the land – came to a similar conclusion. The New Zealand Golf Course was therefore included in the proposal to ensure that the scale of the site was sufficient to accommodate the amount of housing required taking into account constraints on the land, and also to ensure that any development coming forward in this location would not be unconnected to the existing urban area.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst it is recognised that with a site of this size there would be an opportunity to provide new infrastructure, such as health and educational facilities, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

In terms of housing mix and affordability, it is acknowledged that there would be an opportunity to provide a good range of dwelling types and include a proportion of affordable

housing. However, policies in the Core Strategy would also ensure that appropriate and affordable housing types are delivered on the original six sites, taking into account local need at the time (currently policies CS11: Housing mix; and CS12: Affordable Housing). Similarly in terms of biodiversity, Core Strategy policies would conserve and protect biodiversity assets at any of the allocated sites, and would require development proposals to contribute to the enhancement of existing biodiversity features (currently CS7: Biodiversity and nature conservation). Design policies would also apply, currently CS21, which require proposals for new development to create a safe and secure environment, where the opportunities for crime are minimised, irrespective of whether it is a large, single site or multiple sites.

Accessibility to the A320, and subsequently the M25, and Woking Town Centre is recognised. However, the traffic impacts on these routes of a development of this scale would need to be mitigated. The collective outcomes of various transport assessments carried out by the Council, in partnership with Surrey County Council, demonstrate that existing levels of congestion are likely to be exacerbated. Although all development options at proposed safeguarded sites are expected to exacerbate congestion along the A320 corridor between Woking Town Centre and the M25. In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

**Customer Name:** Ms Wendy Mullins

**Summary of representation:**

Objects on four grounds:

1. Unacceptable proximity to Horsell Common – threatens its valuable wildlife.
2. A320 unable to cope with existing traffic flows and would become more congested with this development.
3. Lack of infrastructure to cope with such a large development – schools, shops, hospitals etc. and would place pressure on existing inadequate infrastructure.
4. Failure to consider this development alongside Fair Oaks Garden Village.

**Officer Response:**

Objections are noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses some of the issues raised in the consultation in detail, including traffic implications (particularly on the A320), and infrastructure provision.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council also continues to work proactively with its neighbouring boroughs to assess cross-boundary impacts of development proposals, including that at Fair Oaks Airport.

**Summary of representation:**

Objects due to the traffic chaos that will be caused by 2000 plus homes.

**Officer Response:**

Objection is noted.

As clearly set out in the Land to the east of Martyrs Lane consultation paper, the site is anticipated to enable the delivery of at least 1,200 net additional homes and the necessary social, physical and green infrastructure to support the potential development of the site. If the Martyrs Lane site is safeguarded by the Council, the exact type and quantum of development will be established during the review of the Core Strategy and or Site Allocations DPD.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses in detail the likely traffic implications of the proposal.

**Contributor Reference:** 01851/1/001  
**Customer Name:** Ms Ingrid Hopson

**Summary of representation:**

Supports the proposal.

One large site can accommodate the necessary infrastructure to make a community. It would be more difficult to include new facilities in the smaller sites. Goldsworth Park was a large development that has worked well.

It is the best option in terms of traffic flow.

There are large employers nearby, and some smaller local employers within the new 'estate' with the new infrastructure.

Building one large site would be more economical.

**Officer Response:**

The merits of developing one large community, with the new infrastructure opportunities this represents, are noted and will weigh in the balance of considerations by Members.

It should be noted that the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of traffic, both safeguarding options will lead to traffic impacts. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating

new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. The Sustainability Appraisal facilitated the selection of the original sites based on this objective. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

**Contributor Reference:** 01855/1/001  
**Customer Name:** Ms Valerie Amos

### **Summary of representation:**

Objects to the proposal for the following reasons:

1. The site should have been considered in 2015 in conjunction with the other sites when the housing allocation for the borough was being considered for the plan period of 2027 – 2040.
2. Difficult to consider whether this area of Green Belt should be developed as the Local Plan only shows Green Belt within the Borough's boundaries. The Martyrs Lane site is currently being considered in isolation of the McLaren proposal to the west of the site, and the Fair Oaks proposal in Surrey Heath, even though it is on the boundary of the Borough. If Fair Oaks and this site are developed, the Green Belt would essentially be lost in this area.
3. The urban area of Woking is contained by heathlands, golf courses and farmland. The south eastern boundary of the urban area is more convoluted than the north western boundary, which follows a much straighter line. The Martyrs Lane site breaks this straight line on the map along the north western boundary.
4. The six originally proposed safeguarded sites are situated in roughly 3 locations along the south eastern boundary of the WBC urban area, thereby spreading the impacts these developments bring. They are generally all adjacent to or contained by existing urban areas or semi-rural housing and roads. By substituting these sites for the Martyrs Lane site the impacts are no longer spread around the borough.
5. The Martyrs Lane site is contained by the A320, Woodham Lane and Martyrs Lane. The A320 is extremely busy during rush hour periods with queues already impacting traffic flow at the Six Crossroads Roundabout. It is already difficult to travel south through Woking as the number of crossings over the railway line and canal are limited. The Council should consider the current and future road provision within the borough, before any development takes place. Surrey County Council should be consulted regarding improvements to the A320 and links to the M25 especially if the Fair Oaks proposal goes ahead as well. By containing all the housing allocation at Martyrs Lane the impacts on the A320 and Woodham Lane will be severe. The pressure on the crossings through Woking from this side of town will also be severely impacted.
6. Although the site is close to major employers, it is unlikely that employees would live in the area. A study should be undertaken to ascertain how many of these employees would choose to live in this area of Woking if the houses were within their price bracket. Should the development be approved there should be a guaranteed proportion of truly affordable homes to buy included within the development.
7. The impacts on Horsell Common SSSI and SPA from dog walkers, general recreation and domestic cats would be increased significantly by containing the whole housing allocation in this location even if the development provides alternative recreational areas. The residents of Fair Oaks would also have an impact as there is a direct footpath link to the Common.
8. The planning permission for McLaren's site should not be a material consideration as the permission will lapse and it is no longer to be developed for that purpose.
9. There is a lack of services in this area, with facilities over a mile away. The previous sites were close to existing services and facilities. As part of the planning process, the Council

would need to be assured that sufficient services would be provided to meet the needs of this new area.

**Officer Response:**

Objections are noted and will weigh in the balance of considerations by Members.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD in conjunction with the other sites. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. The Council therefore did consider parts of the land east of Martyrs Lane in previous years.

Officers have access to maps relating to Woking Borough, but recognise that a wider map of the Green Belt may have been of assistance in reaching a view.

It is accepted that a degree of Green Belt land would be lost if both the Martyrs Lane site and Fairoaks site were developed. However, the main consideration is the degree to which this land contributes towards the integrity and purposes of the Green Belt, and whether its loss will undermine these purposes. In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt. It is accepted that urban sprawl may be increased further when taking the Fairoaks proposals into consideration.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

If the Martyrs Lane site were to be removed from the Green Belt, the new boundary would follow the administrative boundary line of the Borough. This would be considered a new, strong and defensible Green Belt boundary line.

The merits of spreading development across the Borough are noted and will weigh in the balance of considerations by Members. The Council selected the original six sites in part due to their reasonable proximity to existing local services and facilities such as shops, schools and health centres, as evidenced by the Sustainability Appraisal (as noted in the representation). It should be noted that there are also merits associated with developing one

single site, such as opportunities to provide new infrastructure (which can also serve the existing surrounding community) as part of any development coming forward. It should also be noted that there are up-to-date and robust policies in the Core Strategy and Development Management Policies DPD that will ensure any impacts of development are mitigated sufficiently be they at one site or multiple sites.

Regarding traffic implications, the Council has carried out a series of separate studies in partnership with Surrey County Council to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the same traffic hotspots, including the A320.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development. The Council will continue to work with the County Council to determine traffic impacts, and mitigation measures required.

The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development both at Martyrs Lane and the six other sites, to ensure that a proportion of dwellings are affordable.

The small portion of the site within the Thames Basin Heaths SPA would not be developed. It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that

important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The Council agree that the previous planning history of the McLaren site has limited weight. It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the proposed modifications:

As mentioned above, various sites within the wider Martyrs Lane site were assessed as part of the Strategic Housing Land Availability Assessment (SHLAA) and the Sustainability Appraisal which fed into the Site Allocations DPD work. The sites are within the Green Belt, and so cannot be considered a suitable location for residential development unless they are removed from the Green Belt, as their development would lead to an area of development unconnected

form the urban area. The site has been assessed in the Green Belt boundary review as part of Parcel 2, which had a low capacity for change: "The area to the north [of Parcel 2] is a fine-grained landscape where it will be difficult to accommodate significant change without significant adverse effects on the landscape pattern and features; removal of any of this land would also leave an area of development unconnected to the urban area" (see paragraph 3.5.11). This is why the consultation included the New Zealand Golf Course in the proposal – to ensure any development is connected to the existing urban area. In their representation, the golf course has confirmed that its land will not be made available for safeguarding to meet future development needs as envisaged in the consultation. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs. Therefore even if the land were removed from the Green Belt for a modest housing development as suggested in the representation, the availability of land for development would be an issue. If the Council only developed the previously developed, potentially available parts of land north of the golf course, it would still be unconnected to the urban area and lack reasonable access to existing services and facilities to serve the community.

However, this is not to say that parts of the land could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 01856/1/001  
**Customer Name:** Mrs Barbara Lovejoy

**Summary of representation:**

Supports the proposal.

1. Previously developed land. The Martyrs Lane site is on Green Belt land, some of which has been previously developed – which is not true of the other proposed sites.

2. Infrastructure. The A245 through West Byfleet and over the M25 bridge has no spare traffic density capacity left, especially when other new developments in the area are taken into account.

3. Developing one site for the future housing needs of Woking would probably mean economies of scale and would help solutions to local infrastructure concerns.

4. Amenity value – Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

5. Heritage – the heritage features of the area around the two Pyrford fields include the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a SNCI, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.

6. Landscape. Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.

7. Agriculture. Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

**Officer Response:**

The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

Although some parts of the land are previously developed, the sites are still washed over by the Green Belt designation. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. Peter Brett's Green Belt boundary review report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land (if the Golf Course were not included) would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The conclusion of both studies demonstrate that, despite parts of the site being previously developed, the area makes an important contribution to the purpose of the Green Belt – the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

The Council has worked in partnership with Surrey County Council to study the traffic implications of the various development options. The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

The conclusion of both studies demonstrate that, despite parts of the site being previously developed, the area makes an important contribution to the purpose of the Green Belt – the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

The Council has worked in partnership with Surrey County Council to study the traffic implications of the various development options. The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

**Contributor Reference:** 01862/1/001  
**Customer Name:** Ms Susan Austin

**Summary of representation:**

Supports proposal. The Pyrford sites have very poor road links and minimum infrastructure. Martyrs Lane has good main roads available, and houses would be more enclosed, giving the residents more of a 'village' feel. There would be space to build more community services e.g. health centres, school, and affordable housing.

**Officer Response:**

Support is noted at the merits as set out in the representation will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their location and size.

Finally, it is acknowledged that the Martyrs Lane proposal presents an opportunity to create a new, succinct community. However, development of the originally proposed sites would also offer new residents the opportunity to integrate with existing, established communities and contribute towards their local economy and society.

**Contributor Reference:** 01866/1/001  
**Customer Name:** Mr Norman Ingate

**Summary of representation:**

Supports the proposal, particularly in order for the Pyrford sites to be substituted because:

- the infrastructure in this location is not suitable (including roads for the extra traffic – the roads are very bad between 8–9.30am);
- the school is not large enough;
- insufficient health facilities;
- potential for devaluing properties.

**Officer Response:**

Support is noted, and objections to development at Pyrford sites are noted.

The Regulation 18 Consultation Issues and Matters Topic Paper provides a detailed response to the issues raised in the representation (particularly regarding infrastructure provision at Section 3, traffic impacts at Section 20 and Section U, and health provision at Section M).

The Council is working with Surrey County Council to ensure that future development options will be supported by the necessary physical and social infrastructure, such as transport infrastructure and schools.

It should be noted that recent allocation of school places at Pyrford Primary School demonstrates that places are in fact available to parents who wished their children to attend the school but whose home address was outside the geographical boundary of the parish. This would suggest that a modest capacity exists for any new residents moving to any new development in the area. New development also brings with it the opportunity for new or improved local infrastructure, as identified in the Pyrford Neighbourhood Plan, through the Community Infrastructure Levy and/or on-site provision.

Whilst it is noted that residents are concerned about property values, it should be noted that this is not a material planning consideration. Nevertheless, it is expected that development, regardless of whether it is in Pyrford or other areas of the borough, will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 01877/1/001

**Customer Name:** Mark, Linda, Max, Luke Knowles

**Summary of representation:**

Support the proposal in substitute of developing the sites in Pyrford.

The fields help make Pyrford a village rather than a small town. Along with the beautiful Norman church St Nicholas, they are an important rural part of Surrey, enjoyed by walking families and dog walkers looking at the views. They help get away from the busy roads surrounding Pyrford.

The Martyrs Lane site is more enclosed and relatively unused. Part of it was a military site and not protected greenfield. MPs speaking in the Commons recently said it was unnecessary to build on the Green Belt.

Martyrs Lane has better road access than Pyrford, with the A320. Coldharbour Road – at peak times – suffers bad traffic congestion and lack of parking. Further development here will exacerbate this traffic problem and increase dangers of a child being hurt.

Properties in Pyrford are likely to be priced out-of-reach for many people.

**Officer Response:**

Support for the proposal is noted.

Several of the issues raised in the representation are addressed in detail in the Regulation 18 Consultation Issues and Matters Topic Paper, particularly at Sections 1 and 2 (justification of the release and safeguarding of Green Belt land); traffic implications and assessments of previously identified sites (Sections 20, U and V).

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

Despite being previously developed land in part, they are still covered by the Green Belt designation and must therefore meet the tests set out in the NPPF and the Core Strategy. They were all ruled out in part because their development would lead to isolated development in the Green Belt.

The conclusions of two studies undertaken as part of the Site Allocations DPD preparation process – the Green Belt boundary review and a landscape assessment – assessed land to the

east of Martyrs Lane. The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt, notwithstanding that parts of the site are previously developed.

Whilst Officers accept that the landscape and amenity features of the sites in Pyrford are highly valued, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy, the Development Management Policies DPD and the Pyrford Neighbourhood Plan include robust policies to protect heritage and local landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise these assets. This includes design policies, which ensure any new developments are designed and masterplanned in such a way that maintain the character of the area in which they are situated.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values or location.

**Summary of representation:**

One large site would make sense– economically and socially. The developer would be better able to programme in schools, shops and GP surgeries in a large site– none of the other sites is big enough for a developer to have to provide these and this would put a strain on existing resources. The site would also be large enough to accommodate traveller sites, and would spread the available sites to allow travellers options north and south of Woking town. The larger site would also make it economically viable to build affordable housing, as well as housing for older adults, and vulnerable groups. Woking is crisscrossed by rail and waterways which produce pinch points for traffic, especially at rush hour. Egle Road in Mayford is at a standstill most mornings even before the Hoe Valley School and leisure centre open. Siting the new development at Martyrs Lane would take traffic to the M25 side of Woking which is where much of the traffic is heading in any event. The land between it and the town centre is suitable to allow the road to be widened/a full carriageway cycle path to be built. In this way, commuters could be encouraged to cycle to the station, and children to cycle to school. Mayford is subject to flooding, and the Martyrs Lane site is not. Avoiding building in Mayford would avoid any exacerbation of the current flood problem, or having to build in flood–amelioration measures, which would raise costs. The land at Martyrs Lane is Green Belt, but has no other designation and part of it is derelict land which has already received planning permission for McLaren to build on, so it is presumably considered suitable for development. Most importantly, the size of the site would mean that Woking could meet Government Requirements for new build homes for many years.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of school, shops and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

In terms of flooding, the land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the assets of the area.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of public transport and access of the site, public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Summary of representation:**

One large site would make sense– economically and socially. The developer would be better able to programme in schools, shops and GP surgeries in a large site– none of the other sites is big enough for a developer to have to provide these and this would put a strain on existing resources. The site would also be large enough to accommodate traveller sites, and would spread the available sites to allow travellers options north and south of Woking town. The larger site would also make it economically viable to build affordable housing, as well as housing for older adults, and vulnerable groups. Woking is crisscrossed by rail and waterways which produce pinch points for traffic, especially at rush hour. Egley Road in Mayford is at a standstill most mornings even before the Hoe Valley School and leisure centre open. Siting the new development at Martyrs Lane would take traffic to the M25 side of Woking which is where much of the traffic is heading in any event. The land between it and the town centre is suitable to allow the road to be widened/a full carriageway cycle path to be built. In this way, commuters could be encouraged to cycle to the station, and children to cycle to school. Mayford is subject to flooding, and the Martyrs Lane site is not. Avoiding building in Mayford would avoid any exacerbation of the current flood problem, or having to build in flood–amelioration measures, which would raise costs. The land at Martyrs Lane is Green Belt, but has no other designation and part of it is derelict land which has already received planning permission for McLaren to build on, so it is presumably considered suitable for development. Most importantly, the size of the site would mean that Woking could meet Government Requirements for new build homes for many years.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of school, shops and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

In terms of flooding, the land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Although northern parts of the site have been granted planning permission in the past, this decision was made in an entirely different context and does not necessarily imply that the land is suitable for housing development. It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the assets of the area.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

In terms of roads and traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of public transport and access of the site, public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Summary of representation:**

Support the proposal that land to the east of Martyrs Lane to be considered for future housing development. The proposed site is sufficiently large to accommodate a considerable number of dwellings and, most importantly, could also provide the necessary infrastructure in the way of shops and transport links. This would be extremely difficult to the south side of Woking. The Martyrs Lane site's ready access to major employers, to the M25 and to Heathrow Airport would make it a more attractive place to build, rather than in parts of the Borough that are already crowded and which would involve driving through the congested town centre of Woking, where there are frequent delays to traffic.

**Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County

Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Summary of representation:**

Support for the Martyrs Lane proposal and reject the Pyrford site for housing redevelopment.

**Officer Response:**

Support noted

**Contributor Reference:** 01809/1/001

**Customer Name:** Mr And Mrs Sithambaram And J R Jeyam

**Summary of representation:**

Support for Martyrs Lane site because of easy and swift access to Heathrow and Gatwick Airports, West Byfleet and Woking Rail stations and shopping centres in both towns. Bus and cycle routes already exist. A320 to the south of Woking is congested with several existing feeder roads. In contrast, A320 to the north can be developed and will be relatively easier to plan, obtain permission and implement, than in the south. Also St.Peter's Hospital is close by and easy to access. It also provides employment opportunities together with McLaren's Centre and Animal and Plant Health Agency. The site is a single piece of land, large enough to accommodate 1200 or more houses, providing a margin for future needs. The creation of associated shops, schools, and sports/leisure centres will be easier to access as these can all be in one place, reducing the need for residents to travel out for such facilities thus reducing traffic congestion.

This site, though in the green belt, has no other national or local landscape designation. There is some land North of the golf course which is largely disused and derelict and planning permission has previously been given for McLaren to enhance their Centre on part of the site. Therefore, this land may be suitable for further housing or other development, should the need arise. Martyrs Lane development may also contribute in any redevelopment of Sheerwater.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of employment opportunities, it is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. This is true for any of the safeguarded sites.

It is accepted that the Martyrs Lane site does not contain landscape constraints, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal. Parcels of land north of the golf course were assessed as part of the Site Allocations DPD process, and ruled out as their development would lead to isolated development in the Green Belt (see paragraph 3.5.11 of Peter Brett's Green Belt Boundary Review report).

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties.

Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

### **Summary of representation:**

The site is big enough (112 hectares) to accommodate 1,200 houses, including affordable housing, one or more Gypsy and Traveller sites, and the necessary infrastructure of shops, primary schools, health centre etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities. It will also simplify the process for obtaining planning permission

There are major employers close by: St Peter's Hospital, the Animal and Plant Health Agency, McLaren Technology Centre and the Brooklands Retail Park. A new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking Town Centre and the mainline railway station to the South without encountering the traffic delays where roads cross railway lines. Bus routes and cycle routes, including to Woking Town Centre, exist already. There is little development along the A320 North of Woking, making road widening relatively easy if necessary. This is a better proposal than the option of building South of Woking where the A320 is often at a standstill in the morning rush-hour and that is before the new Hoe Valley School has opened.

4The Martyrs Lane site, although in the Green Belt, has no other National or Local landscape designation unlike some of the other proposals, such as those here at Mayford. There are no Escarpment and Rising Ground Landscape Importance issues such as those faced in GB10, GB11 and GB13.

Most of the site is clear of Flood 2 and Flood 3 designations which should make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing where the Council's Core Strategy (CS12) states that 35% of all new homes should be Affordable Housing but admits that this target is not being met. In a similar vein, the Council also admits that it is struggling to meet its target for the provision of Specialist Residential Accommodation (CS13) for older people and vulnerable groups as "land values for sites allocated for general residential development can make securing sites for more specialist accommodation difficult in terms of viability and availability." Use of the Martyrs Lane site can help Woking to meet its requirements under CS12 and CS13.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking. Currently, almost all other pitches are at the South West side of Woking in Heathlands Ward (Mayford), restricting Gypsy and Traveller choice as to where they can live. Gypsy and Traveller sites would be sustainable by virtue of being within the residential development site and would satisfy CS14, Gypsy and Traveller pitch criteria, which includes the requirement to avoid unacceptable adverse impacts on the visual amenity and character of the area. Gypsy and Traveller pitches included in this residential development would count towards the requirement for Woking Borough Council to find 24 pitches from 2016–2027, and an additional 9 pitches from 2027–2040. Land at Martyrs Lane could easily accommodate one or more Traveller sites to satisfy a target of 15 pitches, thereby removing the Ten Acre Farm (GB7) Traveller site proposal.

Because of the size of the Martyrs Lane area – it is almost twice the size as the six sites it might replace – it should be possible to build all the properties necessary to fulfil Woking's future Housing and Traveller needs, even if it subsequently turns out that more than 1,200 houses are needed, or if there is a further requirement post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

#### **Officer Response:**

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

In terms of roads and congestion, The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

In terms of flooding, the land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this.

In terms of previously developed land, parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be

available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government Policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is single or multiple sites.

At the Regulation 18 stage Officers had recommended to Council the needs for travellers accommodation should be met at 5 Acres and 10 Acres. The need as determined is 19 pitches up to 2027. At the Council meeting members have requested that Officers re-visit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 Consultation. Officers accordingly are investigating this matter and will report to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Summary of representation:**

There are two main issues regarding sustainability over the proposed site such as the lack of access to services such as health and schools, as well as to local amenities and leisure facilities. The site is somewhat isolated and whilst it may seem easier to replace several smaller developments with one large one, the position of the site throws up a number of very significant issues. In order for this development to succeed it would effectively need to become a locality in its own right with consequent financial, technical and environmental considerations. Does the Borough Council have for example a coherent plan for the capital funding of the necessary services and infrastructure in order for this development to succeed? The previous set of smaller options may have a better chance of success if, due to their smaller scale and location, these significant financial, technical and environmental considerations are less important, and the possibility exists for those developments to integrate more seamlessly to existing localities.

Also the lack of transport infrastructure to accommodate such a large development. Those living there risk being reliant upon private cars, which would not support the development of a vibrant connected community for people of all ages. If the decision to develop part of the Green Belt has already been taken, then it is imperative that the environmental and social impact of building a large number of houses on it, whose only realistic means of transportation are private cars, is taken extremely seriously. The development could have environmental and social issues especially for the young and elderly due to the pollution from cars and lack of other transport options to support social cohesion.

For these reasons, it would be prudent to retain all options including the previous ones that this consultation seeks to replace. Woking must play its part in ensuring there is sufficient housing for the future. However it is not clear how this 'big bang' approach will necessarily be more sustainable than the other approach considered previously.

**Officer Response:**

In terms of infrastructure, to ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully

assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council has adopted the community infrastructure levy (CIL) as the primary means for securing developer contributions towards strategic infrastructure provision. The levy is set at a rate that will not undermine development viability. A viability assessment has been carried out to demonstrate that residential development across the borough will achieve positive viability. Officers accept that the CIL Charging Schedule will continue to be reviewed in future to take into account new information. Nevertheless, it is not envisaged that the levy will be set at a level that will undermine development viability.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site and indeed for the development of any of the other proposed six safeguarded sites. However, it has always been very clear to the Council that infrastructure funding has never been and cannot be met entirely by developer contributions. Public sector contributions have and will always be a significant part of infrastructure funding, and the Council works tirelessly with relevant agencies to secure public sector and other sources of funding for infrastructure projects. For example, the CIL Charging Schedule identifies the priority infrastructure to support the delivery of the Core Strategy, how much it will cost, how much of the funding will met from developer contributions and how much is expected to be secured from public sector sources. This gives an indication of the scale of public sector funding expected to help deliver the identified infrastructure.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

There are also some types of infrastructure that due to their catchment areas of service provision, their patronage crosses administrative boundaries. These are common and examples are secondary schools, hospitals, transport and drainage. The Council is aware and works with providers and the neighbouring authorities to take that into account.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part

of this consultation, which the Council will take into account. The Council is also working constructively with Surrey County Council who is the education and transport provider for this area to quantify the transport and education provision needed to support the development and how they could be delivered. All other relevant infrastructure and utility providers are also consulted to help assess the infrastructure needs to support future growth. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

In terms of transport and car usage, a key thrust of the transport policies of the Core Strategy and the NPPF are to influence a shift from car based travel to sustainable travel modes such as public transport, walking and cycling. The overall spatial strategy of the Core Strategy is to concentrate most new development at the main centres because they offer a range of key services and facilities to help minimise the need to travel and to encourage sustainable travel modes. Specific references are made to Policies CS1 A spatial strategy for Woking Borough and CS18 Transport and accessibility of the Core Strategy which clearly demonstrate the importance that the Council places on encouraging walking and cycling. These policies have been scrutinised at Examination and judged to be in conformity with the NPPF. In addition to the policies of the Core Strategy, a key objective of the Council's Parking Standards is to use parking provision as a tool to encourage walking and cycling, in particular, at locations where key services and facilities are readily available without undermining economic vitality. Policy CS18 of the Core Strategy makes this point very clear.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

Transport Assessment (2010)

Cumulative assessment of future development impacts on the highway network (2011)

Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015)

Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016)

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The County Council has also carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

In terms of public transport, Officers would agree that public transport infrastructure currently serving the vicinity of the Martyrs Lane area is relatively limited. However, this would equally be true for most of the other six safeguarded sites. It would therefore be necessary for the Council to work with providers to improve service provision and frequency, if this site were to be safeguarded for future development. As emphasised above, bus services serving the other six safeguarded sites are also relatively limited and their development would equally require measures to improve services in these areas.

In terms of achieving sustainable development, the Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

Supports the site at Martyrs Lane and objects to building in Pyrford.

**Officer Response:**

Support noted

**Contributor Reference:** 01768/1/001  
**Customer Name:** Ms Judith Mawhood

### **Summary of representation:**

Support for the Martyrs Lane site because it is a previously developed site and the NPPF advises brownfield sites and previously developed sites should be used before Green Belt land. In contrast the two fields in Pyrford have been farmed for centuries and have never been built on. They are an essential component of Pyrford, providing the rural landscape essential to the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The stated objective of the plan is to 'maintain and enhance the area's distinctive and special rural and residential character.' Pyrford's green belt fields are a contributing asset and are used to produce farm crops for either animal feed or bio fuels whereas the Martyrs Lane Land has no current use at all.

In 2012 planning permission was granted for a 60,000 square foot factory in the northern portion of the Martyrs Lane site. This permission was revoked at the request of McLaren. The planning officer in the council, considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. In addition the Army Camp parcel hosted approximately 50 army mizzen huts during the war and was used as emergency housing for about 5 years after the war. The SCC parcel includes an infill site. Today the 3 parcels of land north of the Golf Course comprise semi-derelict facilities, unused, uncared for and overgrown woodland and represents pre-developed land in Green Belt. The sites should have been initially prioritised by WBC

The Site Capacity of 1024 Dwellings compared to the other sites. This was the figure for anticipated capacity published in the original Regulation 18 Consultation conducted in June 2015 and is repeated in the Announcement Letter and Consultation Details for this consultation:

- . Land south of High Road, Byfleet (Proposal GB4 in the draft Site Allocations DPD. Anticipated capacity is 85 dwellings);
- . Land to the south of Murray's Lane, Byfleet (Proposal GB5 in the draft Site Allocations DPD. Anticipated capacity is 135 dwellings);
- . Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford (Proposal GB10 of the draft Site Allocations DPD. Anticipated capacity is 171 dwellings);
- . Land to the north west of Saunders Lane, Mayford (Proposal GB11 in the draft Site Allocations DPD. Anticipated capacity is 210 dwellings);
- . Land rear of 79 – 95 Lovelace Drive, Teggs Lane, Pyrford (Proposal GB12 in the draft Site Allocations DPD. Anticipated capacity is 223 dwellings); and
- . Land east of Upshot Lane and south of Aviary Road, Pyrford (Proposal GB13 in the draft Site Allocations DPD. Anticipated capacity is 200 dwellings).

There is no need to build on the Golf Course as the area north of Golf Course totals 36.7 hectares. This is nearly 6 hectares more than the effective area of 31 hectares included in the 6 original sites, after building constraints are considered.

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria. The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. The Surrey Landscape Character Assessment says of the land encompassed by parcel 9 'the enclosed farmland, experienced from the public rights of way network, give the area a rural feel.'

Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.' The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations. The site has been partially developed in the past and has included both military and civilian dwellings during WWII and in the post-war years.

One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure issues like water, waste, and electricity when compared with the provision of equal services on 6 separate sites spread across the whole borough. Disruption to residents and traffic of a single site would be significantly less than that incurred by 6 separate sites.

The land values of northern sites are much less than the 6 original sites suggested and this facilitates the provision of Affordable Housing. Housing in Pyrford is expensive and more executive type homes will not provide the key worker homes needed by employers such as McLaren and St Peter's Hospital.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

This selection of Martyrs Lane would allow new and efficient infrastructure to be put in place on the northern sites, potentially avoiding greater costs and providing much needed new facilities. Also there would be no disruption to existing communities which there would be with the original sites. Current plans for West Byfleet area between now and 2027 will mean the

combined plans for Sheer House, Broadoaks and West Hall will already result in approximately 950 new homes in the Pyrford/West Byfleet area.

Summary information compiled from the Surrey County Council (SCC) traffic reports dated 28 January 2015 and 7 September 2016 suggest that the average impact of 900 dwellings at Martyr's Lane based on the 10 "worst" roads or junctions will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet + Pyrford. Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet. Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is already slow and frequently at a standstill at peak times.

The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Pyrford Junior School is already full and has taken many pupils from the Maybury area. Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Martyr's lane already has better bus services than other sites. Currently 446 runs on Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford cease at c18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Service. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services and arranging adequate services at one site will be easier than to several dispersed sites.

Green Belt land in Pyrford is very accessible and actively used by walkers, runners, cyclists and others from all across the Borough. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public for leisure or recreation, despite its Green Belt status.

The Surrey Landscape Character Assessment describes some of the heritage features of the western section of character area SS10, which includes parcel 9, 'the historic wooded grounds of Pyrford Court are grade II listed, and a Conservation Area covers Pyrford Village. Pyrford Common is designated as a Site of Nature Conservation Interest'. To these features can be added the Aviary Road Conservation Area and the network of ancient footpaths. The two fields are integral to the heritage setting of the area.

Martyrs Lane has limited public footpaths through the area and has no known heritage value. It is not an integral feature of local designated heritage sites referred to in the Hankinson Duckett report such as Church Of All Saints, Grade II listed buildings, 0.4km west of the site.

Thus, Martyrs Lane provides a viable direction for WBC housing expansion, which would provide new homes in an area which has capacity and is a more compelling option than trying

to further overload the areas encompassed by the 6 original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

**Officer Response:**

Support is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

In terms of heritage and amenity, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy

that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Contributor Reference:** 01769/1/001  
**Customer Name:** Mrs Christine Pring

**Summary of representation:**

Supports Martyrs Lane site and not the Pyrford sites. There is no need to build on the Golf Course as only 1024 houses are required not 3000/3500.

A single site at Martyrs Lane will provide greater economy to address the many infrastructure issues concerning the original six sites and additional community services such as a new Health Centre, First School and affordable housing.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Customer Name:** Mr Tony Jacob

**Summary of representation:**

Support the Martyrs Lane site as a single site for safeguarded development land and still objects to the sites in Pyrford. The New Zealand Golf Club should be retained and should be taken out of the site boundary.

**Officer Response:**

Support for Martyrs Lane Site is noted.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

In terms of removing the Golf Club from the site boundary, parcels of land north of the golf course were assessed as part of the Site Allocations DPD process, and ruled out as their development would lead to isolated development in the Green Belt (see paragraph 3.5.11 of Peter Brett's Green Belt Boundary Review report).

The merits of the New Zealand Golf Club as set out in the representation are noted and will be considered by the Council. The membership nature of the Golf Club is not a material Planning consideration.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform

decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

Support noted

**Contributor Reference:** 01770/1/001  
**Customer Name:** Mr Stephen Shepherd

**Summary of representation:**

Supports the proposal. Preferable to original proposals and in particular any development either side of Upshot Lane.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

**Contributor Reference:** 01596/2/001  
**Customer Name:** Mr Daryl Jordan

**Summary of representation:**

Objects to the proposal. The additional households will need transport to their place of work, to a train station, to school etc and the surrounding roads, including the main route to the motorway and A roads, are already too busy. There are not enough amenities. Existing residents will suffer.

**Officer Response:**

Objection is noted. The Woodham and Horsell Neighbourhood Forum Issues and Matters Topic Paper addresses the issues raised in the representation in detail, including the likely impacts on transport infrastructure (such as the A320), accessibility of railway stations, and provision of social infrastructure.

It is expected that development, regardless of whether it is at Martyrs Lane or the original six sites, will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Contributor Reference:** 01776/1/001

**Customer Name:** Mr And Mrs Nick And Jan Kamburoff

**Summary of representation:**

Supports the development of land north of the golf club as a single site as the most economical use of rate payers funds, rather than multiple sites in the area – in particular, against development of Upshot Lane fields due to inadequate local services, including roads, for such a large development.

**Officer Response:**

Support of the proposal is noted.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure, whatever the development might be. This will be the case irrespective of whether it is a single site or multiple sites. The Council is satisfied that the sites can be developed with the necessary infrastructure to support their sustainable delivery. Section 3 of the Regulation 18 Consultation Issues and Matters Topic Paper provides more detail.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Topic Paper referred to above sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

It should be noted that McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of

about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 01781/1/001  
**Customer Name:** Mrs B A Wingate

**Summary of representation:**

Supports the proposal.

Good access to Chertsey and the M25.

Opportunity to provide new infrastructure: schools, local shops, doctor surgery. New roads can be planned for the safety of children.

Better than trying to squeeze properties into the other sites.

**Officer Response:**

Support is noted and the merits of the proposal as set out in the representation will be weighed in the balance of considerations by Members.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure (including transport infrastructure), wherever the development might be. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Accessibility from the Martyrs Lane site to Chertsey and the M25 is noted. However, it is important that new development at this location does not reduce accessibility in terms of worsening traffic and congestion. A series of transport assessments commissioned by the Council confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

It should be noted that the Council has a number of planning policies and best practice guidance in place to ensure that future development is of the highest standards and reflects local character. Through careful masterplanning it is not considered that properties will be squeezed into the sites, as suggested in the representation.

**Contributor Reference:** 01815/2/001  
**Customer Name:** Mr And Mrs Geoff And Jean Plowman

**Summary of representation:**

Objects to the proposal: the site is too large. Development on the smaller sites would be more easily absorbed into those areas.

Horsell Common is a unique SSSI and one of the few remaining areas of heathlands in the south east of England. Development would be detrimental to such a precious area.

**Officer Response:**

Objection is noted, and comments will weigh in the balance of considerations by Members.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

**Contributor Reference:** 01788/1/001  
**Customer Name:** Mr Ian Marshall

**Summary of representation:**

Objects to the proposal as it is Green Belt land and the Housing White Paper reiterated the Government's promise to protect the Green Belt, saying it could only be built on in "exceptional circumstances". Explain the exceptional circumstances that would allow this plan to proceed.

**Officer Response:**

The exceptional circumstances justifying the release of Green Belt land are explained in detail in the Regulation 18 Consultation Issues and Matters Topic Paper. See Sections 1 and 2.

Whilst it is acknowledged that the Housing White Paper reiterates the Government's commitment to protecting the Green Belt, it should be noted that the white paper does not set out any significant change to national Green Belt policy that is not already within the NPPF. The Woking Core Strategy was at public examination, considered against the policies of the NPPF and deemed 'sound' by the examination inspector.

**Contributor Reference:** 01797/1/001  
**Customer Name:** Ms Arietta Gaazenbeek

**Summary of representation:**

Strongly objects to proposal. Nature should be kept intact rather than building more houses. The volume of housing would be too much in such a beautiful area, which will in turn increase the traffic in Woodham and Woking greatly.

**Officer Response:**

Objection is noted.

The Council recognises the challenge of planning and distributing development that meets the community's needs, whilst preserving and enhancing the biodiversity features of the Borough. Most of the new development will be directed to previously developed land in the town, district and local centres, and will be fully assessed to ensure it does not adversely impact on sensitive environmental areas. However, these sites are limited between 2022 and 2027 and beyond, so areas of Green Belt have been identified as a broad location for growth to sufficiently meet housing need in the future. The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for releasing Green Belt, and explains how the methodology has attempted to select Green Belt locations which contribute the least towards the purpose of the Green Belt (see Sections 1 and 2).

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper sets out the Officers' views on traffic implications of the proposal.

**Contributor Reference:** 01826/1/001  
**Customer Name:** Ms Sheila Dorkings

**Summary of representation:**

Supports the proposal as the area is far less populated and likely to cause less objections to future development, unlike the overpopulated Byfleet, Mayford and Pyrford areas which are already well developed with little room to provide the necessary extra schools and facilities to serve the development.

**Officer Response:**

Support is noted.

It is envisaged that planning to meet the housing need for the Borough should not undermine the overall social fabric of the area. There is no doubt that the development of sites will increase the population of some wards/areas. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development.

The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the consultation on the Martyrs Lane site has attracted a similarly large response to the consultation process about the previously identified sites.

**Contributor Reference:** 01794/1/001  
**Customer Name:** Mr Nick Hemmant

### **Summary of representation:**

Supports the proposal.

#### **1. Previously developed land**

The Pyrford fields have been farmed for centuries and never been built on. These Green Belt fields are an essential component of Pyrford, providing rural landscape essential to the semi-rural character of the area, as per the Pyrford Neighbourhood Plan. The stated objective of the plan is to 'maintain and enhance the area's distinctive and special rural and residential character.' In contrast, the Martyrs Lane site has no current use and comprises semi-derelict facilities, unused woodland and is previously developed. Planning permission has been granted for a factory in the northern portion of the site. Mr Freeland, an experienced planning officer in the council, considered the impact on the Green Belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. In addition the Army Camp parcel hosted approximately 50 army mizzen huts during the war and was used as emergency housing for about 5 years after the war. The SCC parcel includes an infill site.

#### **2. Site capacity – 1024 dwellings**

The only credible figure for the purpose of the consultation is 1024 as per the consultation document, rather than figures being discussed up to 3500.

#### **3. Building on the golf course is unnecessary**

The area north of NZGC totals 36.7 hectares. This is nearly 6 hectares more than the effective area of 31 hectares included in the 6 original sites, after building constraints are considered. Therefore there is no need to build on New Zealand Golf Course (NZGC) in order to satisfy the requirement for 1024 dwellings on land safeguarded for development in the period 2027–2040.

#### **4 Green Belt Constraint**

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

#### **5. Environmental constraints**

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

#### **6. Landscape character and sensitivity to change**

The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. The Surrey Landscape Character Assessment says of the land encompassed by parcel 9 'the enclosed farmland, experienced from the public rights of way network, give the area a rural feel.'

Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.'

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations. The site has been partially developed in the past and has included both military and civilian dwellings during WWII and in the post-war years.

#### 7. Economic and social benefit

One larger site would provide economies of scale – easier to provide infrastructure than servicing six separate sites. Less disruption to residents and traffic during construction.

Land values at Martyrs Lane site are less than the six original sites and would therefore facilitate affordable housing. Housing in Pyrford is expensive and more executive type homes will not provide the key worker homes needed by employers such as McLaren's and St Peter's Hospital.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

#### 8. Infrastructure

Infrastructure provision for a single large site easier and more cost-effective than across six sites, with little disruption to existing community (unlike original sites). Current intentions for West Byfleet area pre 2027 will mean substantial deterioration of highways movement and between them Sheer House, Broadoaks and West Hall will result in approximately 950 new homes which is more than enough for the Pyrford/ West Byfleet area.

Summary information compiled from the Surrey County Council (SCC) traffic reports dated 28 January 2015 and 7 September 2016 suggest that the average impact of 900 dwellings at Martyr's Lane based on the 10 "worst" roads or junctions will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet + Pyrford. Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet.

Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is close to theoretical maximum.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Pyrford Junior School is already full and has taken many pupils from the Maybury area, Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Martyr's lane already has better bus services than other sites. Currently 446 runs on Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford cease at c18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Service. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services and arranging adequate services at one site will be easier than to several dispersed sites.

#### 9. Amenity and heritage

Green Belt land in Pyrford is accessible and actively used by walkers, runner, cyclists and others from across the Borough. Martyrs Lane is not easily accessible and in comparison is rarely used by the public. It is an enclosed site and not utilised for leisure or recreation.

There are heritage assets around the Pyrford sites: Pyrford Court, Pyrford Village Conservation Area, Pyrford Common is an SNCI. Aviary Road Conservation Area and ancient footpaths are also nearby. The two fields are integral to the heritage setting of the area. Martyrs Lane site does not have heritage value and has limited footpaths in the area. It is not an integral feature of local designated heritage sites referred to in the Hankinson Duckett report such as Church Of All Saints, Grade II listed buildings, 0.4km west of the site.

#### 10. Other planning considerations

The site is well-contained by urban boundaries to the north and west. The entire 112ha provides a viable, new Green Belt boundary but there is not requirement to allocate all the land for housing.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the 6 original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

Support is noted.

Regarding previously developed land, site capacity and avoidance of the golf course: Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all

other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding Green Belt, landscape and environmental constraints:

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding economic and social benefits:

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Regarding infrastructure provision:

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding roads:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding amenity and heritage:

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

**Contributor Reference:** 01796/1/001  
**Customer Name:** Ms Gina Hemmant

### **Summary of representation:**

Supports the proposal.

#### **1. Previously developed land**

The Pyrford fields have been farmed for centuries and never been built on. These Green Belt fields are an essential component of Pyrford, providing rural landscape essential to the semi-rural character of the area, as per the Pyrford Neighbourhood Plan. The stated objective of the plan is to 'maintain and enhance the area's distinctive and special rural and residential character.' In contrast, the Martyrs Lane site has no current use and comprises semi-derelict facilities, unused woodland and is previously developed. Planning permission has been granted for a factory in the northern portion of the site. Mr Freeland, an experienced planning officer in the council, considered the impact on the Green Belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. In addition the Army Camp parcel hosted approximately 50 army mizzen huts during the war and was used as emergency housing for about 5 years after the war. The SCC parcel includes an infill site.

#### **2. Site capacity – 1024 dwellings**

The only credible figure for the purpose of the consultation is 1024 as per the consultation document, rather than figures being discussed up to 3500.

#### **3. Building on the golf course is unnecessary**

The area north of NZGC totals 36.7 hectares. This is nearly 6 hectares more than the effective area of 31 hectares included in the 6 original sites, after building constraints are considered. Therefore there is no need to build on New Zealand Golf Course (NZGC) in order to satisfy the requirement for 1024 dwellings on land safeguarded for development in the period 2027–2040.

#### **4 Green Belt Constraint**

The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

#### **5. Environmental constraints**

The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

#### **6. Landscape character and sensitivity to change**

The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. The Surrey Landscape Character Assessment says of the land encompassed by parcel 9 'the enclosed farmland, experienced from the public rights of way network, give the area a rural feel.'

Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.'

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations. The site has been partially developed in the past and has included both military and civilian dwellings during WWII and in the post-war years.

#### 7. Economic and social benefit

One larger site would provide economies of scale – easier to provide infrastructure than servicing six separate sites. Less disruption to residents and traffic during construction.

Land values at Martyrs Lane site are less than the six original sites and would therefore facilitate affordable housing. Housing in Pyrford is expensive and more executive type homes will not provide the key worker homes needed by employers such as McLaren's and St Peter's Hospital.

There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

#### 8. Infrastructure

Infrastructure provision for a single large site easier and more cost-effective than across six sites, with little disruption to existing community (unlike original sites). Current intentions for West Byfleet area pre 2027 will mean substantial deterioration of highways movement and between them Sheer House, Broadoaks and West Hall will result in approximately 950 new homes which is more than enough for the Pyrford/ West Byfleet area.

Summary information compiled from the Surrey County Council (SCC) traffic reports dated 28 January 2015 and 7 September 2016 suggest that the average impact of 900 dwellings at Martyr's Lane based on the 10 "worst" roads or junctions will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet + Pyrford. Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet.

Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is close to theoretical maximum.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Pyrford Junior School is already full and has taken many pupils from the Maybury area, Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Martyr's lane already has better bus services than other sites. Currently 446 runs on Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford cease at c18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Service. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services and arranging adequate services at one site will be easier than to several dispersed sites.

#### 9. Amenity and heritage

Green Belt land in Pyrford is accessible and actively used by walkers, runner, cyclists and others from across the Borough. Martyrs Lane is not easily accessible and in comparison is rarely used by the public. It is an enclosed site and not utilised for leisure or recreation.

There are heritage assets around the Pyrford sites: Pyrford Court, Pyrford Village Conservation Area, Pyrford Common is an SNCI. Aviary Road Conservation Area and ancient footpaths are also nearby. The two fields are integral to the heritage setting of the area. Martyrs Lane site does not have heritage value and has limited footpaths in the area. It is not an integral feature of local designated heritage sites referred to in the Hankinson Duckett report such as Church Of All Saints, Grade II listed buildings, 0.4km west of the site.

#### 10. Other planning considerations

The site is well-contained by urban boundaries to the north and west. The entire 112ha provides a viable, new Green Belt boundary but there is not requirement to allocate all the land for housing.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the 6 original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

Support is noted.

Regarding previously developed land, site capacity and avoidance of the golf course: Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the

land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

Regarding Green Belt, landscape and environmental constraints:

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Regarding economic and social benefits:

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable

Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Regarding infrastructure provision:

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding roads:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet more than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding amenity and heritage:

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

**Contributor Reference:** 01729/1/001  
**Customer Name:** Dayanand Patil

**Summary of representation:**

Green Belt east of Martyrs Lane must be protected.

**Officer Response:**

Objection noted. The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper responds to this issue in detail.

**Contributor Reference:** 01733/1/001  
**Customer Name:** Mr Mark Jones

### **Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, Traveller accommodation and the necessary social and community infrastructure needed to support it. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Masterplanning of the site would allow for the provision of affordable housing which is needed in the Borough as the Council is currently not meeting its targets. The site would also be able to accommodate specialist residential accommodation for older people and vulnerable groups.

The site could provide Gypsy and Traveller accommodation for those wishing to live in the east of Woking. All sites are currently in the southwest of the borough. This would also meet the requirements of Policy CS14 and meet Woking's current and future Traveller accommodation needs. Ten Acre Farm can therefore be removed as a Traveller site proposal.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

## Officer Response:

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all

ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Customer Name:** Mr Anthony Saunders

**Summary of representation:**

Objects to the proposal because:

- Together with nearby proposed residential developments, it would create an unsustainable area of housing unsupported by infrastructure of the area;
- The A320 and A245 are unable to support additional traffic, taking into account expansion of McLaren factory too;
- No necessary extra infrastructure provision such as hospital, GP, schools;
- Green Belt should be protected from further incursions;
- Services of Woking already suffer unmanageable pressure. Development of the proposed scale will turn Woking into a metropolis. This is not wanted by the majority of residents. Tower blocks in the town centre have already increased the population substantially. More will be built in the near future.

**Officer Response:**

Objections are noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper have addressed several issues raised by the representation, including infrastructure and transport implications of the proposal. The Topic Paper also sets out Officers' response regarding the Green Belt impacts of the proposal, taking into account findings from landscape assessments commissioned by the Council.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for release of Green Belt to meet future housing need (see Sections 1 and 2). It also sets out how future development will be supported by the necessary infrastructure, taking into account all expected development coming forward in the Core Strategy and beyond (see Section 3).

As set out in Core Strategy Policy CS1: A spatial vision for Woking Borough and Policy CS2: Woking Town Centre, the Council will support tall buildings in the town centre as it is the most sustainable location within the Borough. Whilst development will in turn increase the population of the town centre, it is expected to continue to provide a wide range of services and facilities to support the population.

**Summary of representation:**

Objects to the proposal. The Green Belt land is what makes Woking such a beautiful place to live.

There will be an impact on the rail and road networks. Trains are overcrowded which will become worse with the addition of new homes. Similar on the roads. A limited service is provided as it is, despite the high train fares and council tax.

There will be an impact of local schools and children's clubs. There will be more fighting over available places. Our future generations will struggle to be educated or join in extra-curricular activities.

The land is rich in biodiversity, which will be lost for future generations.

**Officer Response:**

Objections are noted.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for releasing Green Belt land (see Sections 1 and 2), and how sites have been selected which make the lowest contribution to the purposes of the Green Belt.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper sets out in detail how the transport and infrastructure implications of the proposal have been considered, including likely impacts on local roads, access to railway stations, impacts on biodiversity and provision of local facilities such as schools.

The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure, whatever the development might be. This will be the case irrespective of whether it is a single site or multiple sites. The Council is satisfied that the sites can be developed with the necessary infrastructure to support their sustainable delivery.

**Contributor Reference:** 02669/1/001  
**Customer Name:** Mrs Rosemary Solari

**Summary of representation:**

Supports the proposal as it has potential for building the infrastructure required for a new village, with access to the motorway and train stations.

**Officer Response:**

Support is noted. The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Accessibility of the site to the motorway is acknowledged, but development of this scale would likely lead to impacts on the highway. The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options, and they are all likely to exacerbate existing levels of congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Customer Name:** Mr James Prout

**Summary of representation:**

Objects to the proposal.

Spreading new developments around the borough spreads the impact on schools, GP surgeries, transport infrastructure. It also provides market differentiation in terms of how the dwellings will be valued owing to the varied locations. It is also fairer on neighbouring properties. Vast developments of a similar magnitude, e.g. Goldsworth Park, don't really integrate well with existing communities – they create their own.

Flooding would be an issue. Natural soakaway would be replaced with concrete/tarmac. Areas prone to flooding will worsen with climate change.

The worst impact will be traffic congestion. This will affect the attractiveness of the Borough as a place to work and live. With no real alternative to the A320, nor any immediate likelihood of another tunnel/bridge to traverse the railway line, focusing more traffic in this area will dissuade employers moving to the area. Revoking McLaren's planning consent (whether or not they intend to use it) will not be welcome.

Martyrs Lane and Fair Oaks developments will alter the rural nature of the housing around Horsell Common irrevocably, although at least Fair Oaks is a previously developed site.

Build on the original sites, focusing on low cost and a percentage of multi-tenanted properties, and examine areas where small pockets of housing can be developed incrementally to meet the need. Revisit the plan in 2027.

The overwhelming majority of Councillors representing Southern wards on the relevant committees must be addressed.

**Officer Response:**

Objections are noted and will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Form Issues and Response Topic Paper addresses some of the issues raised in the representation in detail, including how flood risk and traffic impacts have been assessed, and how these assessments will be taken into account. It also addresses the issue of satisfactory infrastructure provision.

McLaren Technologies Group Limited has made a representation with respect to this consultation exercise. Whilst it would generally support in principle the release of the land from the Green Belt, it would only allow its land holding to be used as a strategic employment site to support its own future expansion programme. McLaren will not allow its land to be used

as envisaged in the consultation. If the Council were to decide not to release the land east of Martyrs Lane from the Green Belt, McLaren have provided reasons why its land should be designated as a Major Developed Site in the Green Belt. The representations from McLaren has been addressed in full separately.

It is emphasised that the lack of availability of the site does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater and Fair Oaks. Under the Duty to Cooperate, the Council is formally and informally consulting with neighbouring boroughs on potential cumulative cross-boundary impacts of development. This would continue if the site were to be safeguarded for development.

Any safeguarded land that will be identified in the adopted Site Allocations DPD will only be released for development as part of the future review of the Core Strategy and/or Site Allocations DPD. Development coming forward of any of the site options would be determined under planning policy of the Development Plan in place at the time. It is likely that this would include a policy on housing mix and tenures. Officers would expect development proposals to contain a mix of housing types which reflect the need of the area, irrespective of whether it is on a single or multiple sites.

The Council has a laid down procedure for selecting Members to serve on Working Groups. This has been followed in selecting the Members of the Local Development Framework Working Group. In this regard, there is no intention of re-constituting the membership of the Group as a result of this particular representation. It is important to emphasise that the decision to consult on the possibility of safeguarding the land east of Martyrs Lane was made by a vote of Full Council and not by the LDF Working Group. As an advisory Group, the Working Group appropriately carried its duties by making recommendations to Council. The Group gave clear and specific reasons for its recommendation. The Council took them into account before coming to its decision to consult on the land east of Martyrs Lane. All Members of the Council will once again have the opportunity to consider the representations to this consultation and decide which overall strategy they wish to publish for Regulation 19 consultation and submit to the Secretary of State for examination.

**Contributor Reference:** 01641/1/001  
**Customer Name:** Mr Ian A White

**Summary of representation:**

The proposal is the best option for Woking.

A previously developed site with outline planning consent, unlike the alternatives.

Would allow the original sites to remain and preserve the nature of the neighbourhoods concerned.

Benefits of economy of scale.

Easier to secure infrastructure such as school, health centre and other facilities – which are already at capacity in West Byfleet and Pyrford.

Least effect on traffic flow due to proximity to A320.

Well situated for local bus transport.

No need to build on the Golf Course.

**Officer Response:**

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect the character of the area surrounding any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the character of the area.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

**Contributor Reference:** 01650/1/001  
**Customer Name:** Mr Malcolm Brown

**Summary of representation:**

Objects to the proposal.

Development of this scale will strain Woking's infrastructure.

Impacts during construction would be intolerable.

Traffic levels would increase on the A320, reducing access to the M25.

Development would spoil the surrounding area – particularly Horsell Common, which is already under threat from McLaren expansion.

Woking has expanded enough. The surrounding countryside is in great danger of being paved over.

**Officer Response:**

Objections are noted.

Some of the issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Matters Topic Paper, including infrastructure capacity and traffic impacts.

The sites' proximity to the Horsell Common Thames Basin Heaths SPA and SSSI is noted. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy. The Core Strategy and Development Management Policies DPD also contain robust policies to ensure that biodiversity and nature assets are protected from any development that will be anticipated to have potentially harmful effects.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for releasing Green Belt land for future development needs, and describes the methodology adopted by the Council to ensure that the integrity and overall purpose of the Green Belt is protected (see in particular Sections 1 and 2).

The representation regarding impact of development is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities

and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Strongly objects to the proposal.

It will profoundly change the character of the area. A new urban area of this size would greatly extend urban sprawl and change the existing character of the area. The original plan diffuses the proposal future development into smaller parcels across six areas, each more able to absorb its share of the impacts and would not lose their character.

Substantial development planned for this area already: Sheerwater development and Fair Oaks Garden Village. Cumulatively will add strain on the area's infrastructure.

Traffic congestion already very high – would be exacerbated by this scale of development, particularly A320 and A245. These roads already cause noise and pollution which impacts negatively on quality of life. Heavy traffic around roundabouts by the New Zealand golf course and Marist School already. Additional pressure on the road network initially from construction traffic and then from new residents will result in gridlock.

Poor public transport provision in the area. Infrequent bus service, with few routes, and suffers from congestion at peak times. Busy roads discourage cycling. It is a long walk to West Byfleet station or a very congested road journey with expensive parking.

Ecological impacts on the proposed site – there has been no detailed ecological evaluation of the site. It contains important biodiversity, including lowland mixed deciduous woodland, wet woodland, ancient woodland, hedgerow, lowland heath and/or acid grassland. All are UK Priority Habitats. Badger roadkill in the local area testify to their presence on the site. Likely to provide important foraging habitat for bats. The Council has a statutory duty to pay due regard to biodiversity conservation (Section 40 of the Natural Environment and Rural Communities Act 2006 – not confined to designated sites). As well as habitat loss and degradation from the development itself, any major development will bring additional onsite impacts from lighting, pets and disturbance.

Ecological impacts on Horsell Common SSSI and TBH SPA, adjacent to the site. The TBH SPA was specifically retained by the Government in 2013 to protect and safeguard our natural and cultural heritage. Horsell Common is of great biodiversity importance and of immense value to local people. The Common is also under extraordinary pressure, particularly from fouling and disturbance from dogs. Ground nesting birds are particularly under threat. Increased visitor pressure on this site will be detrimental to important wildlife. Even the creation of a SANG is unlikely to meet demand from a development of this size, especially when considered in combination with Fair Oaks and Sheerwater.

## Officer Response:

Objections are noted and will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses several issues raised in the representation in detail, including:

- how landscape and Green Belt assessments commissioned by the Council have assessed the impact on the character of the area and the likelihood of the development leading to urban sprawl;
- the transport impacts of the proposal, and the conclusions of assessments commissioned by the Council, including sustainability of the proposal regarding accessibility to rail stations;
- public transport infrastructure provision, including bus services; and
- the potential adverse impacts on biodiversity present on the site, and how the Council will pay due regard to these assets.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater and proposals at Fair Oaks. Under the Duty to Cooperate, the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has discussed how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross-boundary significance, such as traffic impacts and visitor pressure on the TBH SPA. The neighbouring authorities have made their representations as part of this consultation, which the Council will take into account in forming a decision. The Council will continue to work with neighbouring boroughs on cross-boundary impacts of all safeguarding options.

The sites' proximity to the Horsell Common Thames Basin Heaths SPA and SSSI is noted. The Core Strategy and Development Management Policies DPD contain robust policies to ensure that important wildlife sites and landscape features are protected from development impacts. In particular, policy CS7 on Biodiversity and nature conservation, and CS8 on the Thames Basin Heaths SPA, set out criteria specifying how any adverse impacts must be mitigated in order for development to be supported. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

**Summary of representation:**

The Pyrford fields should not be developed upon as it is valuable agricultural land, still being farmed and used for future generations.

**Officer Response:**

Regarding agricultural land classification, as part of the preparation of the Site Allocations DPD process, the Council has undertaken a review of agricultural land quality within the borough. This has included reviewing the Agricultural Land Classification Database as shown on the DEFRA website. This database is produced and maintained by Natural England.

In addition, the Council has consulted with Natural England as part of the Site Allocations DPD process. Natural England has not raised any objections regarding the agricultural quality of any of the sites identified for release from the Green Belt for development needs. Natural England's representation to the Regulation 18 consultation and Land to the east of Martyrs Lane consultation are available to view on the Council's website. The representation also makes reference to the Green Belt boundary review regarding this matter. The report states that for Parcel 9, the agricultural land classification for the land adjacent to the urban areas is classified as 'urban' which is consistent with the Regional Agricultural Land Classification Maps produced by Natural England.

None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Contributor Reference:** 01549/1/001

**Customer Name:** M Y Foat

**Summary of representation:**

Mr K Foat has drawn the attention of the Council to Woodham Court site in previous years, which, despite being washed over by the Green Belt, has 'brownfield' characteristics as it is a previously used site with existing footprints. It makes little contribution towards Green Belt status.

Correspondence from the Council during the Core Strategy preparation indicated that the site was not suitable for development during that period. Would rather the site was not developed as part of a larger scheme including adjacent McLaren land and New Zealand Golf Course land: preference is for independent development before 2027. The site possesses special circumstances. A sustainable development on what is essentially brownfield land would pose no threat to the Green Belt and could contribute to the regeneration of a derelict area, and provide employment opportunities etc.

**Officer Response:**

The in-principle support for development of the site at this Green Belt location is noted. At Core Strategy stage, the support for development of the site from Mr K Foat was considered, but the purpose of the Core Strategy was to set out the broad locations where development would be accommodated, rather than allocating specific sites for development. This would be the purpose of the Site Allocations DPD.

Land at Woodham Court was subsequently appraised as part of the Site Allocations DPD preparation process for mixed-use development. However, it was not recommended for allocation as it did not conform with the evidence base: the Green Belt boundary review concluded that the parcel within which the site is located had low suitability for removal from the Green Belt (see paragraphs 3.5.5 and 3.5.11 of the report by Peter Brett); and development of the site alone would result in an isolated satellite development within the Green Belt, unconnected to the urban area, and therefore not accord with the NPPF or Core Strategy planning policy.

A second landscape assessment conducted by Hankinson Duckett Associates (2016) recognises the site's capacity for development as the area of recreation does not possess many of the features that are characteristic of the landscape area, so its loss to development would have no adverse effects on the wider landscape. However, the report does agree that development at this site alone would leave an area of development unconnected to the urban area (see paragraph 3.3.11 of the report). The report concludes that Parcel A, within which this site is located, plays an important role in checking the sprawl of Woodham and the villages to the north of Woking. Potential development here alone would be very isolated from any built-up area, and therefore the parcel is of critical important in Green Belt function.

The proposed modification is noted (i.e. bringing the site forward for development before 2027). The Council has identified sufficient sites – which perform well in appraisals conducted as part of the evidence base for the Site Allocations DPD – up until 2027. Sections 1 and 2 of the Regulation 18 Issues and Matters Topic Paper describe the methodology used in detail. It is not therefore necessary to allocate the site for development before 2027, as alternative sites are considered to be more sustainable.

**Contributor Reference:** 01595/2/001  
**Customer Name:** Ms Lorna Forsyth

**Summary of representation:**

Objects to proposal. Preference is to spread development over multiple sites and areas, to disperse the population. Directing new housing to one relatively small site will overburden surrounding roads and facilities e.g. GP's. It would be unsustainable. Also objects because it would be on Green Belt land.

**Officer Response:**

Objection to the Martyrs Lane proposal and support for a dispersed approach is noted.

The issues set out in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

**Contributor Reference:** 01605/1/001  
**Customer Name:** Mr Michael Hipkins

**Summary of representation:**

It is more in keeping with the character of the Borough to use the six previously designated safeguarded smaller sites spread across the Borough. This is particularly the case in view of the proposed development at Fair Oaks Airport as a garden village, which would abut the Martyrs Lane development.

**Officer Response:**

The spatial strategy of the Core Strategy seeks to focus most new development in the main centres which have a range of services and facilities to minimise the need to travel. The Site Allocations DPD reflects this strategy. It is also agreed via the Core Strategy that Green Belt land will be released to meet future development needs between 2022 and 2040.

There are various merits associated with both distributing development across the Borough, and with directing development to a single, large site to meet development needs. If issues such as infrastructure capacity, traffic, Fair Oaks development and landscape impacts of developing one large site are of concern, these issues are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. Section 1 of this paper also sets out Officers' views about the potential for urban sprawl.

**Contributor Reference:** 01606/1/001  
**Customer Name:** Mr David Aldous

**Summary of representation:**

Supports the proposal, particularly for the Mayford sites to be replaced as these are bound by narrow railway bridges, tunnels and an ancient humped-back bridge, making them unsustainable for development. The local facilities – doctors, dentists and shops are at capacity with present demand of residents. Extra facilities would be needed.

Development at Martyrs Lane will be supported by appropriate new infrastructure and has access to good road connections, without limitations of narrow carriageways.

Travellers could also be accommodated at Martyrs Lane, giving easier access for their mobile dwellings and access to main roads.

**Officer Response:**

Support is noted.

The representation against development in Mayford have been addressed by the Council in the Regulation 18 Issues and Matters Topic Paper, in particular infrastructure provision and transport implications.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. The Council will make sure that the development of any land it safeguards is supported by adequate and necessary social, physical and green infrastructure. This will be the case irrespective of whether it is a single site or multiple sites.

The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. However, the minor roads around Mayford have not been identified as ones expected to suffer from exacerbated congestion. The studies do confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary.

At Regulation 18 stage, officers had recommended to Council that need for Traveller accommodation should be met at Five Acres and Ten Acres. That need is 19 pitches up to 2027. At the Council meeting, Members requested that officers revisit this recommendation and report to them before making a decision about their strategy for Regulation 19 consultation. Officers accordingly are investigating this matter and will be reporting to Council in due course.

**Contributor Reference:** 01607/1/001  
**Customer Name:** Mr John Cockrill

**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, and the necessary social and community infrastructure needed to support it, without encroaching on the golf course. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

Local roads around Hook Hill Lane are unsuitable for increased traffic load – they are already being used as rat runs, creating a danger to walkers and local residents.

Rural views and surroundings afforded by Hook Heath escarpment would disappear if the land was developed. The property would be surrounded on all four boundaries by houses. Concerned about sight lines into the garden and house, and reduced quality of life during construction time. There would be a significant reduction in the property value.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads – such as those around Hook Hill Lane – for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

Officers recognise that there may be an impact on the amenity of local residents during the construction of housing, but planning conditions attached to any approved planning permission would seek to limit this impact. Concern over reduced privacy and depreciation in property value is understandable. There are robust policies in the Core Strategy and Development Management Policies DPD to ensure that any development coming forward is of the highest design quality, supported by green infrastructure, and that the amenity of nearby residents is protected. These policies would be applied at the Development Management stage.

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads – such as those around Hook Hill Lane – for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

Officers recognise that there may be an impact on the amenity of local residents during the construction of housing, but planning conditions attached to any approved planning permission would seek to limit this impact. Concern over reduced privacy and depreciation in property value is understandable. There are robust policies in the Core Strategy and Development Management Policies DPD to ensure that any development coming forward is of the highest design quality, supported by green infrastructure, and that the amenity of nearby residents is protected. These policies would be applied at the Development Management stage.

### **Summary of representation:**

Objects to proposals to build on the Green Belt in Woking; but if any Green Belt development is absolutely essential and completely unavoidable then Martyrs Lane is more appropriate than the original six sites that were proposed.

The Green Belt is a vital part of the environment and highly valued by residents. Majority of residents do not support building on the Green Belt and strongly disagree with the Council's approach. The Conservative Council should respect the Conservative Government which emphasises the protection of the Green Belt from development.

The Council should prioritise development on previously developed land. A full and proper review of brownfield/empty and underused buildings has not been carried out. This should happen before commissioning consultants to review the Green Belt. The Council seems to be directing most of its efforts to selecting Green Belt sites. Any Green Belt review should only take place once all brownfield land is exhausted and no empty properties remain.

The Council should not be attempting long term housing need forecasts due to the uncertainty of future housing needs, the economy and fluctuating immigration levels. Even short term projections could prove inaccurate. Only a ten-year plan is needed, with a five-year rolling supply. Longer term projects should be paused until the effects of Brexit are more certain. Site allocations beyond 2027 are not appropriate and unnecessary.

Proposals are stating numbers far in excess of 550 houses that is stated need to be on Green Belt land. West Hall alone has this capacity. There should be no need for Green Belt land if other areas are properly addressed.

Concerned about the process leading to permission to release a degree of Green Belt land. Was unaware of previous consultations regarding this, including any publicity about it. Explain which processes took place and how. This needs impartial and independent scrutiny.

The original Byfleet sites are inappropriate because:

1. In previous reviews Byfleet has been identified as inappropriate for any further major development;
2. Flooding issues, expounded by the only means of exit being via Parvis Road, which is congested and close to maximum permitted pollution levels;
3. Limited size and capacity for housing given the constraints from the floodplain and water;
4. The sites border floodplains, and the vegetation therefore plays a vital role in reducing groundwater levels – removal of trees will increase pressure on the floodplains. Environment Agency has identified the Sanway area of Byfleet as at very high risk of flooding.
5. The availability of land (as the landowner is willing to sell) has been prioritised over and above the sustainability of the land;

6. The Byfleet Petition should be given more weight given the size of the response;
7. Together with West Byfleet and Pyrford sites, there is an overconcentration of development in this area (putting pressure on local infrastructure such as roads, schools and GPs) and loss of Green Belt in one general region.

Concern about lack of infrastructure and funding of infrastructure to support the level of housing required.

Broadoaks in West Byfleet as a previously developed site is a reasonable location for some level of development. If all brownfield sites and empty buildings are exhausted, and all the above points have been fully addressed, Martyrs Lane is more suitable than original six sites. However, the level of development should be minimised and maximum green space retained. There are also open spaces in the surrounding areas, whereas this is not really the case with the original sites. Martyrs Lane allows access and exit on to different areas rather than concentrating traffic on just one road. Traffic issues may be mitigated by greater access to the north and south of the site, and avoid all traffic being concentrated onto one small area, unlike the original sites. Martyrs Lane does not have flood issues.

Strongly objects to large-scale development in Byfleet or loss of Byfleet green spaces.

**Officer Response:**

The objections to development on Green Belt land are noted; as is support for the proposal to substitute the six original sites with one site at Martyrs Lane if unavoidable.

The Council agrees that the Green Belt is a vital part of Woking's environment and is highly valued by residents. In response to the Regulation 18 consultation on the draft Site Allocations DPD, the Council prepared an Issues and Matters Topic Paper (available on the Council's website) which addresses many of the issues raised in the representation in detail, including:

- the justification around releasing Green Belt land to meet future development needs of Woking beyond 2027 (i.e. over and above the 550 new homes required between 2022-2027), and how the approach was reached in line with the National Planning Policy Framework issued by the Government, and in line with the Government's commitment to housing delivery (Sections 1 and 2);
- why it is necessary to safeguard sites for development beyond 2027 (Section 2);
- how the Council has conducted a full review of brownfield sites, including empty buildings, in advance of identifying Green Belt sites (Sections 1, 11 and 16) and how all reasonable alternatives have been considered (Section 9);
- how the decision was reached to permit the release of Green Belt land by the independent and impartial Core Strategy Examination Inspector (paragraph 1.6-1.12).

The Inspector recommended the release of Green Belt land for housing development at the Core Strategy Examination. The Core Strategy was prepared over a number of years, and went through various stages of production, including several rounds of consultation on the draft document (in 2009, 2010, and 2011) and an Examination in Public took place over five days in

March and April 2012. The Council was concerned to ensure that public involvement was central to the Core Strategy preparation process, and took into account comments received at each consultation stage. The Inspector concluded that the Core Strategy had been prepared in accordance with Woking's Statement of Community Involvement, and all relevant regulations dictating consultation requirements.

The issues concerning the specific Byfleet sites have been addressed as part of the Regulation 18 consultation process, and further details can be found in the Issues and Matters Topic Paper, particularly:

- Section 5 setting out how flood risk has been assessed;
- Section 13 on how the ownership status of land has no bearing on whether it is released from the Green Belt;
- Section L on how the allocation of sites for development is not evenly spread across the Borough;
- Sections 3 and M on how existing infrastructure has been assessed;
- Section T on how the Byfleet petition has been taken into account.
- Section 3, 20, V and U on how the developments will impact on local transport networks.

Land at Broadoaks, Parvis Road, was allocated for development in the draft Site Allocations DPD and this remains the case. This is not one of the sites being consulted on in this particular exercise. The merits of the Martyrs Lane site as set out in the representation are noted and will weigh in the balance of considerations by Members.

**Summary of representation:**

The land to the east of Martyrs Lane is situated within Green Belt which has been demonstrated to be providing its purpose of preventing the joining up of neighbouring towns/villages. There is a presumption against development in the Green Belt unless Very Special Circumstances can be demonstrated which is clearly set out within the National Planning Policy Framework 2012. That has not happened here – only a wish to avoid opposition in other areas of the Borough where the identified sites are not in areas of strongly performing Green Belt.

Appreciates the difficulties that WBC, in conjunction with other local authorities, has in finding the necessary land to meet its housing allocation, however this area is fundamentally not suitable for the number of dwellings proposed. The local infrastructure struggles as it is when either the A320 Chertsey Road or Woodham Lane have roadworks.

Furthermore there would no longer be a separation between Woodham and Woking which this area of Green Belt clearly provides. It would be far better to proceed with the safeguarded sites in Byfleet, Mayford and Pyrford where the impact is not as great.

**Officer Response:**

The representation regarding urban sprawl and the merging of settlements and transport infrastructure has been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

It should also be noted that the land to the east of Martyrs Lane consultation was not for 3000 houses as suggested in the representation. As set out in the consultation paper, the Council considers that the site could accommodate at least 1200 net additional homes. This is based on the broad capacity of the six original sites identified in the draft Site Allocations DPD.

**Contributor Reference:** 01691/1/001  
**Customer Name:** Ms Louise Sinclair

**Summary of representation:**

The Green Belt is an important feature of the area and the trees and green spaces should be retained.

The road infrastructure is at capacity and development would make the situation worse.

**Officer Response:**

The representation regarding road infrastructure has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The contribution that the Green Belt in this location makes to the overall purposes of Green Belt has also been addressed in the Topic Paper.

The Council has a number of policies in place to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths SPA, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy as well as DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and the Woodland Trust have all been consulted and their representations will be taken into account to inform the Council's preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

**Contributor Reference:** 01692/1/001  
**Customer Name:** Mr And Mrs Bob And Gill Giddings

**Summary of representation:**

Pleased that Councillors from across the borough have agreed to consult residents further about the proposed site.

The site is a better solution to Woking's future housing and traveller needs than Mayford and the other sites. It is large enough for over 1000 houses, including affordable housing and appropriate infrastructure. It would also have the advantage of being one housing estate rather than a number of smaller dispersed ones.

The Martyrs Lane site would meet future housing needs without building on the Green Belt at all. There may also be the scope to meet any additional Central Government housing requirements.

**Officer Response:**

Support for the Martyrs Lane site is noted.

Whilst the site is around 112ha in size, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 01718/1/001  
**Customer Name:** Ms Eleanor Graves

**Summary of representation:**

Objects to the proposed safeguarding of land in Pyrford.

The NPPF states that brownfield land should be used before Green Belt. If exceptional circumstances exist then this should apply to the Martyrs Lane site.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

## Officer Response:

Objection to proposed safeguarding of land in Pyrford is noted.

As addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close

proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Summary of representation:**

The draft Site Allocations DPD has been prepared following analysis of and response to the comments received in relation to the Regulation 18 consultation. The land east of Martyrs Lane is a new site that has not previously been consulted upon and does not currently form part of the draft Site Allocations DPD.

The 2017 consultation is focused solely on this one matter and so the contents of the draft Site Allocations DPD in all other respects is to remain unchanged subject to consideration by Full Council.

Would like to acknowledge that the draft Site Allocations DPD Regulation 19 Document, which is in the public domain, has confirmed that Broadoaks, Parvis Road, West Byfleet (GB6) is identified within Policy SA1 of the draft Site Allocations DPD as one of the sites for immediate release from the Green Belt for development. SA1 identifies that the site is released from the Green Belt and allocated for a mixed use development to include quality offices and research premises, residential including Affordable Housing and educational facilities (Secondary school). It is set out that development of the site can come forward within the Plan period (between 2016 and 2027). It is also of note that the Plan acknowledges the planning resolution on the site and its mix of uses.

Support the Council's draft Site Allocations Document and its intention to remove site GB6 from the Green Belt to facilitate its development within the plan period. If the immediate release sites are not recognised as available, then the discussion of safeguarded sites meeting housing need cannot have a firm base to proceed from. No comments to make in relation to the appropriateness or deliverability of the alternative site on land east of Martyrs Lane.

**Officer Response:**

The Council is fully aware of the previous stages of the Site Allocations DPD and the background to the land to the east of Martyrs Lane consultation.

Comments relating to Broadoaks are noted. This will be considered by the Council when it decides on its preferred safeguarding strategy.

### **Summary of representation:**

The NPPF states that brownfield land should be used before Green Belt, if exceptional circumstances exist.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents

would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

**Officer Response:**

s addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national

policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be

available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded,

the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Contributor Reference:** 01712/1/001

**Customer Name:** Byfleet, West Byfleet And Pyrford Resident Association

**Summary of representation:**

Support for the Martyrs Lane site for housing as it is more appropriate than those in Pyrford, Byfleet and West Byfleet. The land should have been included in the original consultation.

The New Zealand Golf Course was included in the site area for process/technical reasons, leading to the Woodham action group stating that 5000 homes would be built when less than 1000 are intended.

Most of the objections to the Martyrs Lane site are based on misinformation and therefore invalid, a situation that was in part created by Woking Borough Council.

Landowners of the site appear to have much less active in lobbying to Woking Borough Council than private landowners or agents. Part of the land is in public ownership and there should be a preference for this land to be allocated despite it not being a planning consideration.

The matter of infrastructure, highways, services, health and education are no less of an issue in Byfleet, West Byfleet and Pyrford and this is not a planning matter. It is possible to say they are less of a problem than in Byfleet and Pyrford.

Objectors refer to Woodham Village which is misleading. Woking Borough Council has made no effort to correct this misconception. It is the McLaren Village the Ottershaw side of Woking, not Woodham as Woking Borough Council have allowed it to be described. Therefore these objections should be considered carefully as not being objective.

**Officer Response:**

Support for the Martyrs Lane site is noted.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension

revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

The consultation document is very clear in stating that 'it is anticipated that the site is sufficient to enable the delivery of at least 1200 net additional homes and the necessary green and other infrastructure to support the potential development of the site'. Therefore it is incorrect that the scope of the consultation is for less than 1000 net additional dwellings.

The consultation on land to the east of Martyrs Lane is set out in detail in the Consultation Paper, dated January 2017. The proposal for consultation is very clear that the whole 112.1ha site has been identified for consultation, in respect of the possibility of substituting it for the sites safeguarded in the draft Regulation 18 version of the Site Allocations DPD to meet the long term development needs of the Borough between 2027 and 2040. To clarify, the Council has consulted on whether to safeguard the entire site for future development needs. At no point in the consultation document does it state that the New Zealand Golf Course will not be developed if the site is safeguarded by the Council. This is a matter that the Council will only consider in detail if it decides that this site is its preferred safeguarding option.

Regarding land availability, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The availability of land is a significant consideration in the plan making process and representations received from all landowners will be considered by the Council.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

There is no ambiguity within the consultation document. The Council has consulted exactly on what it intended to seek views on, which is to test the possibility of substituting the land to the east of Martyrs Lane for the six sites originally identified for safeguarding in the draft Site Allocations DPD. The matters raised within all representations received by the Council will be fully considered by Members and will be used to inform the Council's preferred safeguarding approach.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Whilst some of the land within the site is publicly owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. Land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Again as highlighted above, the Council has consulted on 'the land to the east of Martyrs Lane', which is a factual description of the location of the site. Regardless of the description or name of the site used within representation received as part of the consultation, the Council will carefully consider the substance of each representation to inform its decision on the matter.

**Contributor Reference:** 01713/1/001

**Customer Name:** Ms Eva Faraji

**Summary of representation:**

Objects to the proposed safeguarding of Martyrs Lane for future development needs.

The road network is at capacity and congested.

There are not enough school places for children and expanding the existing schools is not an option. The only solution to education provision is to build new schools as well as dwellings. High classroom pupil numbers will result in worse results and it is important to educate well future generations.

**Officer Response:**

Objection noted.

The representation regarding traffic and congestion and education provision has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 01724/1/001

**Customer Name:** K Blake

**Summary of representation:**

Please preserve the Green Belt in Byfleet.

With land already released for development in West Byfleet at Broadoaks and West hall, this already meets the housing need for 550 new dwellings.

This will add to congestion on local roads and additional development in Byfleet will make the situation worse.

Green Belt in Byfleet is mainly flood plain and development will increase flood risk.

Use brownfield sites that are currently abandoned.

Byfleet will no longer be a village.

**Officer Response:**

The purpose of the Martyrs Lane consultation is to inform the Council's approach to safeguarding land for future development needs. Whilst Broadoaks and West Hall may be allocated by the Council in the Site Allocations DPD, they are at this stage intended to be released from the Green Belt before 2027. The Martyrs Lane site along with the sites in Byfleet, Pyrford and Mayford are to be safeguarded for future development needs between 2027 and 2040. The Council's decision to safeguard land up to 2040 is considered to be consistent with national planning policy.

The Council has addressed the representation on flooding and traffic in the Regulation 18 consultation Issues and Matters Topic Paper. The Council has also addressed the representation on brownfield land and the impact on local character within the same document.

**Customer Name:** Mrs J Markey

**Summary of representation:**

There is no point expressing our views. Plans will go ahead to matter what is said.

This beautiful area is being systematically destroyed, becoming an extension of the town centre. The character charm of the three 'villages' which makes it unique from concrete buildings, office blocks and car parks will be lost.

Roads will be overstretched. Parvis Road development suggests little thought has been given to motorists.

Walking is not a healthy option given the pollution from traffic fumes. There is mayhem at The Marist School at drop-off time, causing further congestion.

We all know Woodham is a done deal. It'll be one continual car park down to the six cross roads.

Local road and pavement issues are being ignored. No doubt funds will be found to fund repairs to the destruction new developments will incur.

Expects the Old Woking Road will be ripped up again as it always is to accommodate more works required towards further development in this area, thus destroying this once stunning place to live.

**Officer Response:**

The Council takes all the representations it receives into account in the preparation of its Development Plan Documents. The views of local residents are not ignored. However, it has to balance those views with its responsibility to plan to meet the development needs of the Borough, and accommodate a growing population.

The Core Strategy identifies the broad location for new homes, jobs, community facilities and services and how they will be deliver. In doing so, a key objective is to preserve and enhance the cultural, historic, biodiversity and geodiversity features of the Borough, and to protect the integrity of the Green Belt. The Regulation 18 consultation Issues and Matters Topic Paper sets out a detailed justification for the release of Green Belt land to meet the development needs of the Borough (see Sections 1 and 2).

Whilst the Council sympathises with concerns of residents about the impacts that the release of Green Belt land will have on local character, it has ensured through a number of studies can any land that is released from the Green Belt will not undermine its overall purpose and integrity. These purposes amongst others include:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

As per national planning policy (NPPF), when safeguarding land the Council must identify areas between the urban area and the Green Belt. Therefore the proposed sites could be regarded as extensions of Woking's Urban Area (rather than the Town Centre) as cited in the representation. However, the Green Belt boundary review recommends sites based on their contribution towards the above purposes, and those which contribute the least were originally selected in the draft Site Allocations DPD, thus avoiding the merging of towns and unrestricted urban sprawl.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The proposed sites do, therefore, need to be in close proximity to the urban area in order to be considered sustainable. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors. Other sections of this Issues and Matters paper address some of these other factors in detail.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage and landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage or landscape assets of the area. Section 23 of the Regulation 18 consultation Issues and Matters Topic Paper addresses this issue in more detail.

According to the Air Quality Report published by the Council, there is only one area in Knaphill that has been declared an Air Quality Management Area. However, the Council recognises it has a responsibility to measure and improve air quality and any development needs to be sensitive to air quality. New houses and more cars in an already high air pollution area would increase levels of NO<sub>2</sub> whereas spreading the development over six sites would be far less damaging.

The Council accepts that car ownership and usage is relatively high in Woking compared with the national average. However, the overall spatial strategy of the Core Strategy is to concentrate most new development at the main centres because they offer a range of key

services and facilities to help minimise the need to travel and to encourage sustainable travel modes. Specific references are made to Policies CS1: A spatial strategy for Woking Borough and CS18: Transport and accessibility of the Core Strategy which clearly demonstrate the importance that the Council places on encouraging walking and cycling. These policies have been scrutinised at Examination and judged to be in conformity with the NPPF. In addition to the policies of the Core Strategy, a key objective of the Council's Parking Standards is to use parking provision as a tool to encourage walking and cycling, in particular, at locations where key services and facilities are readily available without undermining economic vitality. Policy CS18 of the Core Strategy makes this point very clear. Developments, such as those adjacent to Parvis Road, are required to submit a Transport Assessment and Travel Plan, clearly setting out how the travel needs of occupiers and visitors will be managed in a sustainable manner. Proposals that deliver improvements and increased accessibility to cycle, pedestrian and public transport networks are supported. These policies would also apply to future development proposals in the Borough.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any

development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

Whilst the Council sympathises with the concerns about local road and pavement repairs, it should be noted that the funding streams to address these issues are often from different sources. The Council has adopted the community infrastructure levy (CIL) as the primary means for securing developer contributions towards strategic infrastructure provision associated with that development, including transport infrastructure. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions may also be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. A portion of the money raised may be directed to Surrey County Council to fund education or highway improvements. Thus a benefit of new development is the contribution it can make in funding local infrastructure improvements.

The representation regarding disruption to the existing community due to roadworks associated with construction is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

All Members of the Council will now have the opportunity to consider the representations to this consultation, including the views expressed in this one, and decide which overall site allocation strategy they wish to publish for Regulation 19 consultation and submit to the Secretary of State for examination. The views expressed by local residents will be key in making this decision.

**Contributor Reference:** 02672/1/001  
**Customer Name:** Mrs Pauline Marshall

**Summary of representation:**

Objects to the proposal.

The A320 is already congested, as the main route to the hospital and the motorway.

It would be difficult for a new community to integrate with the existing area.

The nearby Fairoaks, Wisley airfield and Longcross proposals should also be taken into account.

Also, however, concerned about the developments around Saunders Lane. There is too much development to enable the new residents to mix in with the existing residents. The new school and leisure facilities will make this area become part of the town, and lose the small residential character that it has now.

**Officer Response:**

Objection is noted. Some of the issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including traffic impacts on the A320, and infrastructure provision whilst taking into account nearby proposals such as that at Fairoaks.

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fairoaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites. The Council is also working with Guildford Borough Council planning officers who are proposing the allocation of Wisley airfield for development.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

There have been some good examples in the past of new communities integrating well with existing communities, for example, the Goldsworth Park development. With sufficient provision of infrastructure (see the Topic Paper referenced above for further details), the Council is confident that successful integration with the existing community could be achieved at any of the sites proposed for development, including that at Saunders Lane.

Section 23 of the Regulation 18 consultation Issues and Matters Topic Paper explains how the character of the existing area will not be undermined with new development. Section 15 describes how none of the originally proposed allocations, including those around Saunders Lane, would lead to unacceptable urban sprawl, even when taking the new development along Egley Road into account.

**Customer Name:** Mrs Hannah Lane

**Summary of representation:**

Objects to the Martyrs Lane proposal.

Horsell Common Preservation Society own part of the site and objects to the inclusion of its land in the site. It also objects to the proposal of housing development at this location. Copy of the letter of objection from HCPS is attached to this representation.

Aware of the effect of the increase of visitors to the Common, which includes:

The more visitors the more the paths get worn away and widened.

Visitors do not keep to the paths and cause damage to flora and fauna. Trampling destroys habitats of many ground living insects. There is an extensive number of species living on the common and as such it is the largest and most important wildlife site in the borough. It should not be put at risk of degradation by placing most of Woking's future housing developments on its doorstep.

The increase in visitors to the common also effects the habitats of birds due to disturbance.

The Common is heavily used by dog walkers which also affect the habitats of birds. Although SANGs and open space are being provided as an alternative for dog walkers, many still use the common.

The provision of SANGs within the Martyrs Lane site would help mitigate any impact but only slightly. People will use the common as it is more interesting and each new development adds to the existing number of residents visiting the commons.

Fairoaks Airport is also identified for development alongside other proposed development north of Martyrs Lane in Ottershaw. Even if all of these proposed developments includes SANGs, there would still be an increase in visitors to the Common. As the sites are located across three boroughs, there is no requirement for joined up thinking on the matter.

The A320 is already at capacity and any proposals to mitigate development by widening this road will seriously effect Horsell Common.

Attached is the letter from HCPS.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The Council has prepared a land ownership map of the land east of Martyrs Lane and is aware of the part of the land in the ownership of HCPS. It is not intended that this part of the site will be developed. It is included to ensure the defensible boundary of the Green Belt. To put it into context, the land in the ownership of HCPS is about 1.42 hectares (approximately 1.3% of the entire land). Most of the land is either Common Land, in Flood Zones 2 and 3 or within the SPA. The consultation document makes it clear that these areas will not form part of the developable area.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Natural England submitted representation in response to the consultation. It does not have any objection in principle to the safeguarding of the site. It notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed.

It should also be noted that fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will always learn lessons from similar existing sites and work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Regardless of whether the Council safeguards the land to the east of Martyrs Lane or the original six sites for future development needs, a detailed ecological assessment of the proposed development site will be required at the development management stage. This assessment would carefully consider any ecological or habitat features within and adjacent to the site.

It should also be noted that environmental organisations such as the Environment Agency and Surrey Wildlife Trust have been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the site as well as important ecological sites adjacent to Martyrs Lane can be protected.

As part of the Thames Basin Heaths SPA Avoidance Strategy, the Council seeks developer contributions for Strategic Access Management and Monitoring (SAMM) to monitor and manage the impact of people using the SPA. This includes encouraging people to use the SANGs rather than the SPAs. The information gathered from the monitoring will also be used to inform any future updates of the Avoidance Strategy if it is considered to be an ineffective method of avoiding harm to the SPAs.

Regarding the representation on development in neighbouring boroughs and the lack of joined up thinking, it is correct that it is up to the individual boroughs and districts within the Thames Basin Heaths Special Protection Area to apply the avoidance measures when determining planning applications. Nevertheless, the Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and therefore ensures that a common mitigation approach is applied across all relevant boroughs and districts.

The representation on the A320 has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. At this stage the Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. These mitigation measures will also take into account any ecological or physical constraints.

Whilst a number of the representations raised relate to management issues, such as footpath widening, the Council is committed to working in partnership with the relevant stakeholders such as HCPS to ensure the long term protection of all of the SPAs and other Commons and habitats within the borough where practical and feasible.

The attached representation from Horsell Common Preservation Society has been considered and addressed separately.

**Contributor Reference:** 01431/1/001  
**Customer Name:** Guildford Borough Council

**Summary of representation:**

Summary of representation can be found in the Duty to Cooperate Bodies Topic Paper

**Officer Response:**

The Council's response can be found in the Duty to Cooperate Bodies Topic Paper.

**Contributor Reference:** 01430/1/001  
**Customer Name:** Ms Gillian Wilder

**Summary of representation:**

Woking needs to accommodate young families and despite the concerns of local people this site would represent a pragmatic approach.

**Officer Response:**

Support for the site is noted.

Regardless of whether the Council decides to allocate the land to the east of Martyrs Lane or the six original safeguarded sites, the Council will make sure that development reflects local housing need as set out in the latest Strategic Housing Market Assessment. This will be the case irrespective of whether it is a single site or multiple sites.

**Contributor Reference:** 01425/2/001  
**Customer Name:** Ms Lynette Dwyer

**Summary of representation:**

Objects to the proposed safeguarding of the site. It would lead to the destruction of wildlife and Green Belt. It would result in significant flooding and traffic congestion. The increase in traffic will also be detrimental to the environment and the health and well being of residents.

There has already been a loss of Green Belt.

Wildlife has become endangered due to mass housing already.

Flooding is the result of a lack of run off for heavy rain.

Public transport can not cope whilst the existing roads are unable to cope with the additional usage based on sinkholes and potholes.

Urge the Council not to ruin the woodland, destroy the wildlife and cause chaos in the community. Woodland should not be touched as they contain endangered species. Hopes that Surrey Woodland Trust is looking into this.

**Officer Response:**

The representation regarding flooding, woodland, wildlife and traffic has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. This also includes the representation relating to sinkholes.

Whilst the Council notes the representation regarding the loss of Green Belt land, the case for doing so has already been established during the preparation of the Core Strategy, which is an adopted Council document. The Council is also of the opinion that its approach to releasing Green Belt land for development needs is consistent with national planning policy. The focus of this specific consultation is to consider the merits of the Martyrs Lane site and ensure that the proposed allocations in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

In terms of environmental pollution, this will be considered and appropriately mitigated at the Development Management stage. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

It should be noted that potholes are the responsibility of the County Highways Authority and not the borough council. The highways authority has a rolling highway maintenance

programme in place (Surrey Horizon) and this includes the A320 for the next maintenance period.

As part of the consultation the Council has consulted with the relevant environmental and wildlife organisations including Natural England, the Environment Agency, Horsell Common Preservation Society and the Woodland Trust. Their comments will be addressed and used to inform the Council's preferred safeguarding strategy.

**Contributor Reference:** 01441/1/001  
**Customer Name:** Mr Oliver Foreman

**Summary of representation:**

New development across various areas is tolerable for the community as the strain on resources and road infrastructure is spread. The substitution of these sites for one will cause chaos on the roads, affect house prices and put a strain on local resources. For these reasons the original proposals should remain.

**Officer Response:**

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It should be noted that changes to property values are not a material planning consideration. Nevertheless through the provision of necessary and appropriate infrastructure and the delivery of high quality housing, it is not expected that the allocation of any of the sites will have a negative impact on the local property market.

**Contributor Reference:** 01443/1/001  
**Customer Name:** Ms Sarah Bounds

**Summary of representation:**

Concerned about the proposals to develop on Green Belt in Pyrford.

The Pyrford sites have amenity value as they are used for recreation. They also form part of the local farming setting and have natural beauty.

The Martyrs Lane proposal provides the opportunity to create a purpose built development of houses and amenities on a site with no intrinsic beauty. It is served by a good network of roads and has been partially taken out of the Green Belt with the nearby McLaren Factory.

This option saves the unique rural landscape around Pyrford as well as relieves pressure that would have been put on the already overstretched infrastructure in other parts of the borough. The proposed allocation will give planners the chance to create an attractive, contemporary, integrated area of housing and amenities which will better serve the borough of Woking, now and into the future.

Urge the Council to proceed with this proposal. It will also help to preserve the character of the village around the borough.

**Officer Response:**

The representations relating to heritage, local character and amenity have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council has carried out a number of landscape assessments during the preparation of the Site Allocations DPD. This includes the Green Belt boundary review, a detailed borough wide Landscape Character Assessment and the Martyrs Lane Landscape Assessment and Green Belt Review. These documents are available on the Council's website. These documents should provide the basis upon which the Council should make its judgement about how the site to the east of Martyrs Lane compares with the six original sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

Although part of the Martyrs Lane site was previously granted planning permission for a factory associated with McLaren Technologies, it should be noted that the permission did not remove the site from the Green Belt. In addition, the development management process is a distinct different process to that of the Site Allocations DPD plan making process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of the planning history of the site, the conclusions of the two independent landscape studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council also has a number of policies and best practice guidance to ensure that all future development is of high quality and integrated into the existing local context in order to achieve sustainable development and the overall spatial vision of the borough.

**Contributor Reference:** 01444/1/001  
**Customer Name:** Ms Janet Deacon

**Summary of representation:**

Support for the proposal.

The infrastructure already exists and due to the size of the site it is more cost effective to provide other infrastructure. There is good employment opportunities in the area, resulting in less travel time to work and therefore less pollution. There are good transport links. There are no flooding issues. A brownfield site near McLaren had previously been granted planning permission. The site is large enough to accommodate affordable housing. It is also large enough to expand the housing to accommodate future needs.

**Officer Response:**

Support for the Martyrs Lane site is noted. The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. However none of these buildings fall within the site boundary that was previously granted planning permission for a factory associated with McLaren Technologies.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site

Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Contributor Reference:** 01461/1/001

**Customer Name:** Mr Rod Steel

**Summary of representation:**

This is a more suitable site than the land to the east of Upshot Lane. There will be fewer traffic and other impacts and it is important that this Green Belt site is protected.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst the representation notes that the Pyrford site should be preserved, the overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 01467/1/001  
**Customer Name:** Mr Richard Wyld

**Summary of representation:**

Landowner within the Martyrs Lane site and supports the proposed safeguarding allocation. The site is adjacent to the urban area and is suitable for development.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. This representation clarifies the availability of the site for future development needs.

In deciding on its preferred approach to safeguarding, the Council must ensure that the sites selected are the most sustainable compared against other reasonable alternatives and that any land removed from the Green Belt will not undermine its overall purpose and integrity.

**Contributor Reference:** 01465/1/001  
**Customer Name:** Mr Godfrey H Chapples

**Summary of representation:**

Representation from a concerned Byfleet resident.

How well do you know the Martyrs Lane site, would it be possible to provide contact details to gain access to the site?

Aware of the problem of identifying sites in the Site Allocations DPD as everyone objects to development. This is not sustainable as development has to continue with a growing population. However several areas have reached saturation point when infrastructure provision is considered. Infrastructure must be a consideration for every potential development as should flood risk, gridlock and fumes which have implications on health and the cost of living.

Government must be taught by professional experts on the following issues.

Flood alleviation – Byfleet requires repairs, alleviation and drainage. All areas in the flood plain should not be permitted until a flood alleviation plan has been completed by the Environment Agency, Thames Water and Government in Action.

Highways – Wider roads with passing places and lay by facilities, more mini roundabouts and traffic lights.

Education – More schools for all ages

Healthcare – More surgeries and consultation facilities, hospital beds, social care. A complete reassessment of all requirements by each and every settlement location divided into the various sizes of new housing.

Leisure, business, countryside, wildlife and more should also be considered.

Density of development must be carefully assessed for all of the sites before permitting further development.

Every local authority does this now but this should be planned at a county and then national level for it to be delivered effectively. This is not helped by governments changing every 4-5 years.

There must be a referendum or methodology in place to resolve these issues and ensure that a strategic list of infrastructure importance is agreed and funded over a long period. Alternatively it could be within the NPPF for the period 2027 to 2040.

Development in this plan period must concentrate development within the existing urban area to preserve the Green Belt and ensure that a sensible national plan is in place between 2027 and 2040. Proposals on brownfield land should be permitted in most circumstances.

We should look after the interests of local residents but also be sympathetic towards others in adjacent areas. We all wish for a contented peaceful lifestyle in Surrey. Lets proceed to assist Council's in providing the planning system we feel is appropriate to local needs.

**Officer Response:**

The land to the east of Martyrs Lane is in the ownership of several different public and private organisations and individuals. If access to the site is required, then it is recommended that the representor contacts the landowners directly to arrange visits. It is not the Council's responsibility to arrange a site visit.

The Council has an adopted Core Strategy and has prepared the Site Allocations DPD to facilitate the comprehensive delivery of the Core Strategy. This includes 4964 net additional dwellings, 48000sqm of office and warehousing floorspace and 93900sqm of retail floorspace. As set out in Policy CS1, most of the new development will be directed to previously developed land in the town, district and local centres, which offer the best access to a range of services and facilities. The scale of development that will be encouraged in these areas will reflect their respective functions and nature. The Core Strategy also sets out indicative density ranges in Policy CS10: Housing provision and distribution. It should be noted however that these density ranges set out will depend on the nature and sustainability of the site and influenced by design.

The Council will make sure that the development of any land that it safeguards and allocates for development is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions (CIL Regulation 123 List). This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Regarding the representation on cross boundary infrastructure issues such as education and healthcare provision, the Council has addressed this as part of the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council is aware of flooding across the borough. Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. Regardless of the Council's preferred safeguarding option, based on the location and size of all of the proposed safeguarded sites, a detailed flood risk assessment will be a requirement of any development proposal that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Local Plan. Policy CS9 also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development. As part of the plan making process, the Council has undertaken a Strategic Flood Risk Assessment and taken this into account in identifying sites in the Site Allocations DPD. At the Development Management stage, the Council would also consult with the Environment Agency on flooding matters. It may also choose to consult with Thames Water on water management issues.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The social and environmental implications of the proposed allocations will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

Regarding the representation on leisure and business, the draft Site Allocations DPD sets out a number of sites across the Borough that will facilitate the delivery of additional public open space (SANGs) as well as a wide range of sites for employment uses. The allocation of these sites should assist in meeting the objectives set out in the Core Strategy, in particular policies CS8: Thames Basin Heaths SPA, CS15: Sustainable economic development and CS17: Open space, green infrastructure, sport and recreation.

The Council has addressed the representation on wildlife for the land to the east of Martyrs Lane in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. Additionally, the Council has also addressed this issue in the Regulation 18 consultation Issues and Matters Topic Paper which is available online.

Whilst regional planning was abolished by central government following the implementation of the NPPF, the Council is required under the Duty to Cooperate to work with neighbouring authorities and key stakeholders to address cross boundary issues such as infrastructure

provision. A Duty to Cooperate statement will be published in due course to demonstrate the extent of cooperation between the authorities and indeed with other relevant organisations. The proposals of the DPD are informed by comments from the County Council and other stakeholders both formally and informally. The Council is committed to continue to work positively with these organisations throughout the Site Allocations DPD process and beyond to address common and strategic infrastructure issues of the area.

As set out above, the Council has a Regulation 123 List which contains the strategic infrastructure projects of priority in the borough. This list will be reviewed on a regular basis to reflect existing and future infrastructure needs.

The principle of Green Belt development and the Council's approach to safeguarding has already been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Based on the policy requirements set out above and the necessary mitigation and infrastructure measures that development will have to deliver, the Council is confident that the proposed safeguarding of land for future development needs will not have a significant adverse impact on the quality of life for existing or future residents.

**Summary of representation:**

The existing infrastructure is not suitable for this proposal.

Use brownfield sites rather than destroying the Green Belt.

**Officer Response:**

The representation regarding infrastructure has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council has previously addressed the representation regarding the principle of Green Belt development during the Regulation 18 consultation of the Site Allocations DPD. Please refer to the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 01344/1/001  
**Customer Name:** Dr Martin Christie

**Summary of representation:**

Supports the proposal. The merits of the site include:

Economies of scale would make it easier to resolve infrastructure requirements such as water, waste and electricity. This would also result in less disruption to residents and traffic than providing this infrastructure on six separate sites.

Land values are lower than the six sites and therefore facilitate the provision of affordable housing within the borough. Housing in Pyrford is expensive and executive homes will not provide key worker homes needed by local employers.

There are three large employers close to the site. Key worker housing can be provided for these employees and there is bus access to St Peters Hospital.

The site could accommodate new infrastructure and at a cheaper cost than the original sites. There would also be no disruption to existing communities. The proposals for development in the West Byfleet area will have a significant impact on the local road network and is already more than enough for the Pyrford and West Byfleet area.

The SCC traffic reports show that 900 dwellings at Martyrs Lane will have less impact on traffic conditions than the development proposed for Mayford or the combination of developments proposed for Byfleet and Pyrford. Martyrs Lane would alleviate the congestion likely in West Byfleet. The Martyrs Lane site has the benefit of main road links to Woking, Chertsey and the M25. Safeguarded sites in Pyrford and Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet and over the M25 bridge is close to theoretical maximum.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

The West Byfleet Health Centre is at capacity and a new health facility could be built on the Martyrs Lane site.

Pyrford Junior School is at capacity and a new school could be built on the Martyrs Lane site.

Martyrs Lane has a better bus service than the other sites.

The Green Belt in Pyrford is used for recreation purposes. Martyrs Lane is not easily accessible and rarely used by the public.

The Green Belt in Pyrford is an important element of the heritage setting of the area and is adjacent to a number of heritage assets and designations. Martyrs Lane has limited footpaths

and no known heritage value. It is also not an integral feature of local designated heritage sites.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet more than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

In addition to the above, the Council has already addressed a number of these issues relating to the six original sites in the Regulation 18 consultation Issues and Matters Topic Paper.

**Customer Name:** Ms Elizabeth Lawrence

**Summary of representation:**

The proposal would create too much traffic for the roads to be able to manage.

**Officer Response:**

This representation has been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 01399/1/001  
**Customer Name:** Mr Ian Makowski

**Summary of representation:**

Supports the proposed safeguarding of Martyrs Lane for future development needs.

The NPPF states that brownfield land should be used before Green Belt. If exceptional circumstances exist then this should apply to the Martyrs Lane site.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

## Officer Response:

Support for the Martyrs Lane site is noted.

As addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close

proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values.

The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Contributor Reference:** 01400/1/001

**Customer Name:** C M Heath

**Summary of representation:**

The traffic on the adjoining roads are at capacity and development would make the situation worse.

Other sites are still available for development such as the former Camphill Tip and Industrial Estate. Development on these sites would require road mitigation measures including road widening and a roundabout.

**Officer Response:**

The Council has addressed the representation on traffic and congestion in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Regarding the suggestion of using Camphill Tip and Industrial Estate for residential development, the Council is proposing to allocate the former waste site for employment uses. This is identified as site UA49 in the draft Site Allocations DPD. It is important to highlight that the Site Allocations DPD seeks to facilitate the delivery of housing, employment and retail floorspace and identifying sites for employment uses is an important part of delivering the overall spatial vision of the borough. Therefore the loss of a designated employment site would not assist in delivering the economic objectives of the Core Strategy.

Nevertheless the Council is working in partnership with the County Highways Authority to identify specific traffic and road mitigation measures to ensure that the allocation of all of the sites in the DPD will not led to an adverse impact on the highway network.

**Contributor Reference:** 01402/1/001  
**Customer Name:** Mr Neil McEvoy

**Summary of representation:**

Supports the proposed safeguarding of Martyrs Lane for future development needs.

The site has direct access to the A320 and M25. The A320 can be easily upgraded if needed and minimise the impact of additional traffic for the rest of the borough. The other sites are in village locations with overcrowded and unsafe roads. Access to the Pyrford sites is limited with no scope to improve. They also flood.

The scrub land at Martyrs Lane has little amenity value. Pyrford Green Belt is used for recreational purposes.

The existing education and medical facilities in Pyrford, Mayford and Byfleet are at capacity with no scope for extension. Martyrs Lane could include new facilities.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in other parts of the borough than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape and amenity, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The representation regarding amenity has been addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 01405/1/001  
**Customer Name:** Mr Roger Breeden

**Summary of representation:**

The site should be retained as Green Belt for wildlife and to support the environment.

The existing infrastructure will not be able to cope with additional people and traffic.

Development should take place on brownfield sites and more flats in Woking Town Centre supported by enhanced public transport.

**Officer Response:**

As set out in the Regulation 18 consultation Issues and Matters Topic Paper, the Council is required to identify land within the Green Belt to meet development needs. The Council considers the case for doing so to be based on robust evidence and in line with national planning policy. Within this paper, the Council has also set out how the sites have been identified and the assessments carried out on brownfield sites. The topic paper is available on the Council's website.

The focus of this consultation is to ensure that all reasonable sites have been considered and that the most sustainable sites are allocated for future development.

During this consultation the Council has consulted with the relevant environmental and wildlife organisations including Natural England, the Environment Agency, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and will be used to inform the Council's final decision on its preferred safeguarding strategy.

The representation regarding infrastructure has been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

It should be noted that the draft Site Allocations DPD contains a significant number of sites within the town centre that will facilitate the delivery of additional housing. However it is important that development meets local housing needs and therefore family housing is delivered in addition to flatted developments in the town centre. The housing need of the Borough is set out within the Strategic Housing Market Assessment and reflected in Core Strategy Policy CS10 and CS11.

The Council is working in partnership with the County Council and public transport operators to explore and determine feasible and deliverable strategic highway and public transport measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Summary of representation:**

Objects to the proposal to use Green Belt land in Pyrford for future development needs.

The NPPF states that brownfield land should be used before Green Belt. If exceptional circumstances exist then this should apply to the Martyrs Lane site.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

**Officer Response:**

Objection to development in Pyrford is noted.

As addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as

envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and

still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely

unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Customer Name:** Ms Gail Graves

**Summary of representation:**

Objects to development in Pyrford.

The NPPF states that brownfield land should be used before Green Belt. If exceptional circumstances exist then this should apply to the Martyrs Lane site.

The Green Belt in Pyrford has been farmed for centuries and undeveloped. It is an important landscape feature in the semi-rural character of the area, as highlighted in the Pyrford Neighbourhood Plan. The Martyrs Lane site by contrast has no current use at all.

Planning permission has been granted for a factory in the northern section of the site, which has been revoked on request of the applicant. The Case Officer for the application considered the impact on the green belt and assessed that building at a large scale on the site presented no risk of merger and sprawl. The land also includes a former army camp and landfill site. The site to the north is semi-derelict, unused, uncared for and overgrown woodland. It is pre-developed land in the Green Belt. The sites should have been initially prioritised by WBC.

There has been confusion regarding the number of dwellings required to be safeguarded. The Pyrford Neighbourhood Forum maintains that 1024 dwellings are needed based on the anticipated capacity of the six safeguarded sites from the Regulation 18 consultation.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Brett report considered Pyrford land to have Major Environmental Constraints. The land is Grade 3 agricultural land with some with some Grade 2. The parcel is also identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford sites.

The Green Belt boundary review notes that Parcel 9 has little or no capacity for change. It is considered to have a strong unspoilt rural character as referenced in the Surrey Landscape Character Assessment and the Pyrford Neighbourhood Plan. The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

Land values on this site are lower than the other sites and this would facilitate the delivery of affordable housing within the Borough. Development in Pyrford would result in executive housing that would not benefit key workers at local employers.

There are major employers in close proximity with good bus connectivity to the site.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

Evidence suggests that Martyrs Lane would have less impact on traffic conditions than the development proposed for Mayford or the combination of development proposed for Byfleet and Pyrford. This site would alleviate congestion in West Byfleet. The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads. The traffic flow over the A245 in West Byfleet and over the M25 is at capacity. The existing roundabout on Martyrs Lane would enable easy access to the development.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

Martyrs Lane has better bus services than the other sites.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

The Pyrford sites are an integral part of the setting of local heritage assets and the semi-rural character of the area. Martyrs Lane has no known heritage value.

The site is well contained by urban boundaries to the north and west and golf course to the south. No requirement to allocate all 112ha for housing.

The site is not utilised for leisure or recreation.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the six original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

Objection to development in Pyrford is noted.

As addressed in the Council's Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has been established and is consistent with national policy. Therefore the focus of the land to the east of Martyrs Lane consultation should be about ensuring that the proposed allocations put forward by the Council in the Regulation 19 version of the Site Allocations DPD are the most sustainable when compared against other reasonable alternatives.

The representations relating to heritage, local character and amenity have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

Mr Freeland's comments relating to planning application reference PLAN/2011/0823 has been noted. His comment about urban sprawl was made in an entire different context that is distinct from the site Allocations DPD process. The Council has carried out two separate independent consultant studies. They have both concluded that the development of the site would lead to urban sprawl and an encroachment into the Green Belt. This view is shared by Officers in this particular context. Whilst it is not intended to underplay the significance of Mr Freeland's comments as a material consideration, the conclusions of the two independent studies are sufficiently clear in its analysis and logic and robust enough to give them far greater weight.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as

envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The land to the east of Martyrs Lane Consultation Paper is very clear about the purpose of the consultation and the quantum of development that the Council considers the site can deliver. Therefore the 1200 net additional dwellings as set out in the consultation paper is broadly similar to the total of the six original sites set out in the Regulation 18 Site Allocations DPD.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and

still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely

unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. It should also be noted that neither the Martyrs Lane site nor the six original sites contain statutory listed buildings or features. Therefore on this particular matter there is no clear advantage between any of the proposed safeguarded sites.

As set out above, the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding point 10 of the representation the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

**Customer Name:** Ms Jackie Wheeler

**Summary of representation:**

Supports the proposed safeguarding of Martyrs Lane for future development needs.

The site is partly previously developed land unlike the other six sites.

The A245 in West Byfleet and over the M25 has no capacity, especially when future development in the area is taken into account.

One site would deliver economies of scale and would help to find solutions to many of the infrastructure concerns.

Pyrford Green Belt is used for recreational purposes.

The Pyrford Green Belt is part of the heritage setting of Pyrford's historic setting.

Pyrford is protected by Policy CS24 as an escarpment and rising ground of landscape importance.

Pyrford's fields have been farmed for centuries and include good quality agricultural land. They also contribute to the rural character of the area and setting for the southern gateway into the town.

In addition, there are currently commercial/brown field sites that would better suit the development of housing, such as that on Boundary Road in Woking.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the overriding objective of this consultation is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, regardless of what sites are allocated. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

Additionally, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Regarding the representation on amenity and heritage, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area. In addition the representation on amenity, heritage and landscape character has previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. The Pyrford sites are not classified as high quality agricultural land by DEFRA.

It is highlighted that the Council has already identified the Monument Way West Industrial Estate in the draft Site Allocations DPD. The site is currently within a designated employment area and the Council is proposing to allocate it for additional employment uses. This site, in combination with the other employment allocations, will help deliver the economic objectives of the Core Strategy and spatial vision for the borough. To clarify the Site Allocations DPD does not just allocate housing sites, its purpose is to facilitate the comprehensive delivery of the Core Strategy including employment, retail, infrastructure and open space requirements.

**Contributor Reference:** 01358/1/001

**Customer Name:** Ms Linda Hall

**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, Traveller accommodation and the necessary social and community infrastructure needed to support it. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Masterplanning of the site would allow for the provision of affordable housing which is needed in the Borough as the Council is currently not meeting its targets. The site would also be able to accommodate specialist residential accommodation for older people and vulnerable groups.

The site could provide Gypsy and Traveller accommodation for those wishing to live in the east of Woking. All sites are currently in the southwest of the borough. This would also meet the requirements of Policy CS14 and meet Woking's current and future Traveller accommodation needs. Ten Acre Farm can therefore be removed as a Traveller site proposal.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

## Officer Response:

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all

ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 01359/1/001

## Officer Response:

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Masterplanning of the site would allow for the provision of affordable housing which is needed in the Borough as the Council is currently not meeting its targets. The site would also be able to accommodate specialist residential accommodation for older people and vulnerable groups.

The site could provide Gypsy and Traveller accommodation for those wishing to live in the east of Woking. All sites are currently in the southwest of the borough. This would also meet the requirements of Policy CS14 and meet Woking's current and future Traveller accommodation needs. Ten Acre Farm can therefore be removed as a Traveller site proposal.

The size of the site means additional housing can be built if more than 1200 is needed, either between 2027 and 2040 or post 2040.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

## Officer Response:

Support for the Martyrs Lane site is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Additionally, the Peter Brett report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all

assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to

consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' accordingly are investigating this matter and will be reporting to Council in due course.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Contributor Reference:** 01363/1/001

**Customer Name:** Mr Colin Hall

**Summary of representation:**

The site is large enough to accommodate 1200 private and affordable homes, Traveller accommodation and the necessary social and community infrastructure needed to support it. There are advantages to one new large estate than several dispersed small ones as it is easier to create the necessary infrastructure.

It is easier to obtain planning permission.

There are major employers in close proximity and a new neighbourhood centre would provide additional employment opportunities.

The A320 provides easy access to the M25 and Heathrow Airport as well as Woking Town Centre and Station. Bus and cycle routes into Woking also already exist. The A320 to the south of Woking is already at capacity even before the Hoe Valley School has opened.

Road widening of the A320 north of Woking would be easy if necessary.

Although Green Belt, the site has no other national or local landscape designation unlike some of the other proposals.

Most of the site is within Flood Zone 1 and therefore make the planning and development process simpler and more cost effective.

The northern part of the site is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

**Contributor Reference:** 01364/1/001  
**Customer Name:** Mr Shaun Glanville

**Summary of representation:**

Agrees that the site is the best option for long term development needs.

The principle of development on the site has already been agreed.

The majority of the site is either disused or a golf course that is under used.

The traffic infrastructure for vehicles and cycling already exists.

The proximity to the M25 and major A roads make it cost and development effective.

More cost effective to build one large site then six smaller ones in terms of infrastructure, utilities, leisure and green spaces.

If planned alongside development in Woking Town Centre, it will be a major step forward in meeting the borough's housing needs.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that part of the site was granted planning for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in

ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. It would therefore be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is not being suggested that the entire land or parts of it could not come forward to enable the aspirations of the Council to be delivered if it is proven to be the most sustainable. The Council has Compulsory Purchase Powers, which it could use if it can demonstrate that the land is the most sustainable to meet future development needs when compared against all other reasonable alternatives being assessed. This is a decision the Council might wish to consider when it is choosing its preferred safeguarded strategy for the purposes of the Regulation 19 consultation.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The allocation of all of the sites identified in the Site Allocations DPD, regardless of whether they include Martyrs Lane or the other six safeguarded sites, will take into account the cumulative effect of development to ensure that appropriate mitigation and infrastructure improvement measures are identified and delivered.

**Summary of representation:**

This is a stunning area of nature and the scale of the proposal will have an adverse impact on wildlife.

The local infrastructure and villages will not be able to sustain this amount of development. There has been no information to show that the roads, schools and hospitals can cope with this development.

**Officer Response:**

The representations set out regarding the impact on wildlife and infrastructure have been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 01323/2/001  
**Customer Name:** Ms Rachel Evans

**Summary of representation:**

The proposal will have a significant impact on local infrastructure. Makes more sense to distribute development across several areas over time and enhance Woking.

**Officer Response:**

The representation regarding infrastructure provision has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The representation regarding the preferred distribution of development has been noted and will weigh in the balance of considerations by Members when deciding on the Council's preferred safeguarding approach.

**Contributor Reference:** 01317/1/001  
**Customer Name:** Ms Veronica Semon-Ward

**Summary of representation:**

Strongly objects to the proposed safeguarding of the site.

All development should be fairly distributed across the borough, especially as this site is in close proximity to the Thames Basin Heaths SPA.

There are a number of major developments taking place in the local area including Woking Town Centre, Sheerwater Regeneration and Fair Oaks. This will have a negative impact on residents and wildlife in terms of pollution, traffic and amenity. The proposal is therefore unreasonable.

Due to ward boundary changes, Woodham has no local councillor who lives in the area and there is a lack of representation for local residents or Woodham as an area. Other parts of the borough have significantly stronger representation.

Woodham Lane has high pollution level and development would make the situation worse.

Why is the council not looking to build homes where new schools are being built which correspond with the other DPD allocation sites?

The loss of so many trees can not be justified, especially when the TPOs are strongly enforced on existing trees.

Development should be focused away from the SPA which is an area that the whole borough enjoys.

**Officer Response:**

Objection to the proposed allocation of the site is noted.

The overriding objective of the Martyrs Lane consultation is to make sure that any land that is safeguarded for future development needs is the most sustainable when compared against other reasonable alternatives. In making this decision, the Council will fully consider all representations received as part of the consultation process as well as the Council's evidence base documents including the Sustainability Appraisal. The sites proximity to the Horsell Common Thames Basin Heaths Special Protection Area is noted. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The social and environmental implications of any proposed development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the development management stage. In addition, the traffic implications of the proposal as well as the cumulative effect of development within the wider area will also be taken into consideration. This has been addressed in further detail in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Whilst the recent ward boundary changes have not been to the satisfaction of all local residents in this particular area, it should be noted that the spatial distribution of development is driven by sustainability and not by ward boundaries. It is also important to highlight that the decision to consult on the possibility of safeguarding the land to the east of Martyrs Lane was made by a vote of Full Council. All Members will again have the opportunity to consider the representations to this consultation when deciding which overall strategy they wish to publish for Regulation 19 consultation and to submit to the Secretary of State for examination.

Regarding the representation on air pollution, the forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

As set out above, the Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently the Site

Allocations DPD are managed to help achieve sustainable development. Therefore the Council will only safeguard the site if it is felt to be the most sustainable when compared against the other reasonable alternatives. As part of the Sustainability Appraisal process, the Council has considered the proximity of all sites to local services and facilities. This includes walking times to both primary and secondary schools.

The representation regarding trees has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.
