It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this particular stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Whilst the merits of the Martyrs Lane site have been noted, it would be incorrect to state that the site is not used for recreational activities as it contains Woodham Court, which is a small sports facility, as well as the New Zealand Golf Course. As part of the consultation, the Council has consulted with Sport England and their comments will be addressed separately and will be used to inform the Council's decision on its preferred safeguarding strategy.

The representations relating to heritage and local character in Pyrford have also been addressed in the Regulation 18 consultation Issues and Matters Topic Paper, which is available on the Council's website.

**Contributor Reference:** 02475/1/001  
**Customer Name:** Ms Sue Tasker

**Summary of representation:**

Supports the Martyrs Lane proposal and object to the proposed development of any other of the designated sites within the Borough of Woking.

Whilst the Core Strategy identifies the need to release land from the Green Belt for sustainable development, national planning policy states that this should only occur in exceptional circumstances. The Martyrs Lane site fully meets these criteria.

The Martyrs Lane site is close to major employers and transport infrastructure including the M25, West Byfleet Station and public transport into Woking town centre.

Martyrs Lane is more suitable for development as its land character is more fitting than the other proposed areas of Woking earmarked for potential development.

Development would make the best use of abandoned land.

Any benefit from the positive increase in land values brought about by the development of Martyrs lane would be beneficial to the Woking economy if reinvested correctly. Only the development of Martyrs Lane would achieve this benefit.

The release of Green Belt at Martyrs Lane would make a sensible and reasonable change to the Green Belt and would comply with the NPPF. It would also benefit the whole of the Woking community. Development would have the added advantage of not creating an isolated Green Belt and would maintain a permanent Green Belt boundary.

Development would safeguard the Green Belt in other parts of the Borough which are less suitable for development.

The Consultation Paper contains many errors and inaccuracies when considering Safeguarded sites. For example Woking Borough Council fails to consider that removing sites GB10 & GB11 from the Green Belt would result in sites GB14 and WGB020g becoming isolated areas of Green Belt and therefore lend themselves to eventual removal from the Green Belt. This will result in the slow destruction of the Green Belt by stealth. The use of Martyrs Lane for this proposed development would safeguard sites GB10, GB11, GB14 & WGB020g.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

Based on the wording of the representation, objection to all other designated sites within Woking Borough is also noted.

As set out in Section 1.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy (NPPF). It is therefore considered that all of the proposed safeguarded sites meet the exceptional circumstances requirements of the NPPF and there are no clear advantages between the different sites.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land character, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the various landscape characteristics of each of the sites. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst the safeguarding of the site for future development needs may increase land values and boost the wider Woking economy as suggested in the representation, the purpose of the consultation is to inform Council's decision on its preferred safeguarding option. The overriding consideration in this respect is to ensure that the most sustainable land is safeguarded when compared to all reasonable alternatives.

As set out in the Regulation 18 consultation Issues and Matters Topic Paper as well as above, the Site Allocations DPD has been informed by robust evidence. This evidence suggests that the sites identified in Mayford, Pyrford and Byfleet are the most sustainable when compared against all reasonable alternatives for the purposes of safeguarding land for future development needs. Any new evidence submitted to the Council as part of this consultation will help Members make the final decision on the Council's preferred safeguarding option.

Whilst the removal of the land to the east of Martyrs Lane would create a new defensible Green Belt boundary, it is considered that the removal of the original six sites would also have created a defensible Green Belt boundary. There is therefore no advantages on this particular matter between the Martyrs Lane site and the six original sites. The Green Belt Boundary Review (2014) as well as the Landscape Assessment and Green Belt Review (2016) address this matter in greater detail.

It is not considered that the Martyrs Lane Consultation Paper is incorrect and contains inaccuracies. If the Council decides to safeguard GB10 and GB11 for future development needs between 2027 and 2040, then the sites referred to in the representation as GB14 and WGB020g would become isolated pockets of Green Belt as they would be cut off from the rest of the Green Belt by the allocation of GB10 in particular. These pockets of land would not fulfil the purposes of Green Belt as set out in the NPPF. The Council has been very clear in the draft Site Allocations DPD that GB14 would be removed from the Green Belt for green infrastructure purposes whilst the land referred to as WGB020g would become part of the urban area. This is clearly set out under GB14 in the draft Site Allocations DPD. Should the Council decide to safeguard the land to the east of Martyrs Lane for future development needs instead of GB10 and GB11, then the removal of GB14 and WGB020g may still be necessary to provide green infrastructure to support development in the wider area and form a robust Green Belt boundary. This is a matter that would be considered by the Council when making its final safeguarding decision.

**Customer Name:** Ms Helen O'Donovan

**Summary of representation:**

Strongly dispute the viability of safeguarding land for development in Pyrford, some of which has views of the Surrey Hills Area of Natural Beauty.

Recognise that housing is required and prefers Martyrs Lane for this purpose. It is important that it is supported with schools, health care provision, local amenities for all age groups and acceptable transport which does not impinge upon the environment.

There are an excess of golf clubs in the area and the development of one of these would fulfil housing requirements. The New Zealand Golf Course does not provide membership to local residents and therefore is not a local amenity. Whilst building on New Zealand golf course is not necessarily included in the proposal, this could be considered, provided that the impact would not be detrimental compared to other options to those who live closest to the proposed Martyrs Lane site.

Martyrs Lane is less attractive environmentally and generally has wider access by road in the very close vicinity.

Health care, schools, sports, leisure facilities would be important – the current GP practices would not be able to support increased housing (of any level).

The north of the Martyrs Lane site in particular is poorer quality Green Belt with no public access. The south part includes the New Zealand golf course which does not provide membership to locals.

**Officer Response:**

Objection to the Pyrford sites for future development needs and support for the Martyrs Lane proposal is noted.

Regarding the representation on the provision of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried a number of separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. These are on the Council's website. The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development. This would include ensuring that development does not have a harmful impact on the environment and that it meets the required environmental standards. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. It should be noted that these policies would apply to all development across the borough regardless of whether it is at Martyrs Lane or any of the other proposed sites.

Whilst it is recognised that there are a number of golf clubs within Woking Borough, it is important to ensure that the sites identified for future development are the most sustainable when compared against all reasonable alternatives and that the removal of these sites from the Green Belt will not undermine its overall purpose and integrity. It is also important to balance housing needs against the general well-being of residents and the loss of sporting facilities. The membership requirements of the New Zealand Golf Course is not a material planning consideration.

To confirm, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage the Council has not ruled out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the landscape and environmental merits of the sites. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane within parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest.

**Contributor Reference:** 02490/1/001

**Customer Name:** Mr David Bish

**Summary of representation:**

Object to the proposed safeguarding of Martyrs Lane.

It is vital that Green Belt adjacent to Woodham be preserved for future generations. Its destruction would be irreversible. There is already insufficient Green Belt surrounding this area and is quickly merging with other built up areas to create a massive urban area. Countryside is needed around towns. Government policy on Green Belt states that boundaries should only be altered in exceptional circumstances and has recently been confirmed by the Prime Minister. Quote from PM included in the representation.

There are reasonable alternatives to this site. There are no special circumstances to justify urban development of this land. By even considering such a proposal Woking Borough is disregarding independent reviews it has itself commissioned. See Hankinson and Duckett under Sprawl.

The area under consideration is important heath land. The destruction of vegetation in the area is obvious and cannot be defended. It would be irreversible. Developing the area would be detrimental to wildlife. This detriment would be irreversible and have to be suffered by future generations. The site also borders on to other valuable heath land and the detriment to vegetation and wildlife would extend beyond the area being considered into these adjacent areas.

This specific part of the Green Belt checks the urban sprawl of Woodham. Woking Borough Council are disregarding what is happening in adjacent boroughs and Woodham may eventually become joined to Fair Oaks, Chertsey, Addlestone and Ottershaw.

Fair Oaks development could also result in sprawl and the only way Woking Borough Council can contain this sprawl is to protect the adjacent Green Belt within its boundaries. Similar arguments apply in respect of maintaining green belt between Woodham and other close urban developments in the pipeline at Row Town, Ottershaw and Longcross.

Woking Borough Council appears to be ignoring reviews it has itself commissioned. In August 2016 Hankinson and Duckett concluded that the area under consideration has 'critical importance towards the purposes of Green Belt in checking urban sprawl and safeguarding the countryside'.

Some of the area under consideration is already at flood risk and new development will extend the flood risk beyond the current flood risk area. In addition land around the junction of Martyrs Lane and Woodham Lane already suffers from flooding at times.

There is already frequent bad road congestion in Woodham and West Byfleet including the A245, A320 and Six Crossroads Roundabout. These roads can not cope with any additional traffic.

Martyrs Lane itself is too narrow and widening this road would cause problems at the junction with the A245.

Access to local schools is also difficult and development would have an adverse impact on congestion.

Parking is an issue in West Byfleet, particularly at the Health Centre. Residents of the Martyrs Lane development would require access to this health facility and make the situation worse.

Over the years there has been a steady decline in public transport provision in the Woodham Lane area, will Woking Borough Council financially support new bus routes.

The local infrastructure is unable to support further development. This includes schools, GPs surgeries, hospitals, shops and mobile phone facilities, all of which would be inadequate.

The green belt to the east of Martyrs Lane is vital to maintaining the identity of Woodham and once developed cannot be recreated. Urges Woking Borough to think again and if extra development is needed then it should be carefully integrated into existing communities across the borough. Destroying the precious Green Belt to the east of Martyrs Lane is not the answer.

#### **Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The representation regarding the principle of Green Belt development, urban sprawl and the proposed development at Fair Oaks have all been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

The land to the east of Martyrs Lane is not a designated Thames Basin Heaths Special Protection Area and therefore could not be accorded the same status with the same policy justification for its protection. Nevertheless the ecological significance of the land will continue to be conserved and taken into account in the consideration of any development that could have potential impacts on its ecological integrity. This matter as well as the representation on wildlife has also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of

the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The representation regarding flooding, road infrastructure and congestion, public transport and wider necessary infrastructure have also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

Regarding the representation on car parking, the Council has planning policies and standards in place to ensure that new developments are supported with adequate car parking provision. This also takes into account the location of the development and whether it is in close proximity to public transport. West Byfleet for example is well served by public transport and therefore a reduced parking provision for development in this area may be acceptable. The Council has recently published its revised Parking Standards SPD for consultation and is in the process of adopting the document to inform future planning decisions. The Council is also working with the Clinical Commissioning Groups (CCGs) to ensure that healthcare provision and its distribution across the borough reflects that of future development.

The representation noting a preference for integrating development into existing communities is noted and will weigh in the balance of considerations by Members.

**Contributor Reference:** 02491/1/001

**Customer Name:** Ms Kath Bish

**Summary of representation:**

Object to the proposed safeguarding of Martyrs Lane.

here is already insufficient green belt surrounding the urban areas in the boroughs of Woking, Surrey Heath and Runnymede. Government policy on Green Belt states that boundaries should only be altered in exceptional circumstances and has recently been confirmed by the Prime Minister. Quote from PM included in the representation.

This specific part of the Green Belt checks the urban sprawl of Woodham. There are a number of development proposals in the area including Sheerwater Regeneration Scheme and Fair Oaks. Fair Oaks in particular will result in urban sprawl. Runnymede Borough Council are also proposing to build further housing developments in the Rowtown/Rowhill area. This too will have an adverse affect on Woodham, which will be engulfed by urban sprawl, losing even more surrounding green space.

The green land to the east of Martyrs Lane acts as a break between Woodham and the adjacent urban developments. We cannot afford to lose this green belt. Once gone, it will never be replaced.

The area under consideration is important heath land.

Horsell Common and the new wetland area will be significantly impacted by the proposal, in particular wildlife and vegetation. Much of the common is part of a European Special Protection Area for vulnerable bird species. It would be sacrilege to build a new town next to this special habitat.

The land adjacent to Martyrs Lane floods and suffers from surface water. The proposed development will exacerbate the situation.

There is already frequent bad road congestion in Woodham and West Byfleet including the A245, A320 and Six Crossroads Roundabout. These roads can not cope with any additional traffic. Emergency vehicles have a frequent need to use this road to get to St Peters Hospital and to the adjacent ambulance station.

Martyrs Lane itself is too narrow and widening this road would cause problems at the junction with the A245.

The existing schools do not have the capacity for additional pupils and the West Byfleet Health Centre does not have adequate parking. The situation will get worse with additional development.

I believe that it is inappropriate for new homes to be built in the vicinity of the Martyrs Lane recycling centre because of noise, dust, increased risk of vermin and the type of traffic using the recycling centre.

It is inappropriate to propose a large new urban development in this area. I believe it is far more environmentally friendly to build smaller developments within existing communities across the borough.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The representation regarding the principle of Green Belt development, urban sprawl and Fair Oaks has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

As part of the Duty to Cooperate the Council is working with all neighbouring authorities to address the common issues of the area, including transport and Green Belt development. The extent of cooperation between the relevant authorities will be set out within a Duty to Cooperate Statement.

The land to the east of Martyrs Lane is not a designated Thames Basin Heaths Special Protection Area and therefore could not be accorded the same status with the same policy justification for its protection. Nevertheless the ecological significance of the land will continue to be conserved and taken into account in the consideration of any development that could have potential impacts on its ecological integrity. This matter as well as the representation on wildlife has also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. The Council has also consulted with Natural England as part of the consultation process and their comments on this matter will be carefully considered.

The representation regarding flooding, road infrastructure and congestion, Martyrs Lane Recycling Centre and wider necessary infrastructure have also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper. The Council is also working with the Clinical Commissioning Groups (CCGs) to ensure that healthcare provision and its distribution across the borough reflects that of future development and that through

working with the Highways Authority, that there will be no adverse impacts on emergency response times.

Regarding the representation on car parking, the Council has planning policies and standards in place to ensure that new developments are supported with adequate car parking provision. This also takes into account the location of the development and whether it is in close proximity to public transport. West Byfleet for example is well served by public transport and therefore a reduced parking provision for development in this area may be acceptable. The Council has recently published its revised Parking Standards SPD for consultation and is in the process of adopting the document to inform future planning decisions.

The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives. Therefore the representation regarding the environmental impact of the proposal will weigh in the balance of considerations by Members.

**Contributor Reference:** 02494/1/001  
**Customer Name:** Mr Joseph Pearson

**Summary of representation:**

Objects to the Martyrs Lane proposal.

Woodham Lane already has significant traffic congestion and recent roadworks on the A320 demonstrate that the area can not cope with a large sustained increase in traffic volumes. Further development will make the situation worse. The government regularly release figures to demonstrate the cost to the economy that transport delays produce and the toxic effect of vehicular exhausts have on local inhabitants.

Medical services at both St Peters Hospital and West Byfleet Medical Centre are at capacity and development will add further strain on these services to the detriment of existing and future residents.

There is a lack of school places and development will make the situation worse.

Public transport is poor and will not alleviate pressure on the road network or parking at local stations.

There will be a significant impact on the environment. The loss of Green Belt will exacerbate poor air quality whilst tree removal will increase flood risk. Flooding is already an issue for the A320.

Loss of habitat for wildlife would be substantial and with Fair Oaks Garden Village also being proposed the impact on local wildlife could be catastrophic.

Martyrs Lane recycling centre already causes traffic problems at weekends and it is not clear whether it would be able to support any increased usage and additional waste.

It is strange that Woking Borough Council would want a large development with a number of inherent problems rather than spreading the load across the borough. Perhaps councillors feel more comfortable to make a very bad situation in one place where fewer people are impacted, however badly, rather than having more people just mildly irritated with a number of smaller developments spread around the borough. No budget has been allowed for major infrastructure improvements. There will be no additional cost to the Council to make several small developments instead of one huge one.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The representation has been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

In addition, it should be noted that the Council is working with the local Clinical Commissioning Groups (CCGs) to ensure that healthcare provision and its distribution across the borough reflects planned development.

The environmental implications of any of the proposed sites in the Site Allocations DPD will be required to meet environmental standards at the Development Management stage. The Council has a number of policies in place to ensure that development avoids unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

Regarding the representation on the capacity of the Martyrs Lane Recycling Centre, the Council has consulted with Surrey County Council who is the waste authority for the area. They have responded to the consultation and their comments will be considered. In addition, the waste authority is currently in the process of updating the Surrey Waste Plan and it is expected to identify a number of sites across the county that will manage waste and recycling. As the number of dwellings proposed for the Martyrs Lane site is broadly similar to the six original sites, there is no clear advantage between any of the sites on this matter.

The overriding consideration of this consultation is to identify the most sustainable land when compared against all other reasonable alternatives. The information that is gathered from the representations is useful evidence to inform the Council's decision on the matter. Therefore the decision by Members to consult on the Martyrs Lane proposal was appropriate in order to inform the Council's final safeguarding strategy.

**Customer Name:** Ms Linda Povey

**Summary of representation:**

Support the Martyrs Lane proposal.

The site available is large enough to accommodate 1,200 houses and the required traveller sites as well as the necessary infrastructure to support such a housing development including schools, shops, and medical facilities. It could also accommodate additional development if required. It would not be viable to provide the necessary infrastructure for much smaller development sites. In Mayford, there is very little in the way of shops and no medical facility.

The roads in Mayford are narrow and would not be suitable for widening to accommodate any increase in traffic. The A320 is already very busy, a situation that will be exacerbated when the new Hoe Valley School opens. The roads in the Martyrs Lane appear to be much more suitable for widening.

I understand that a proportion of the Martyrs Lane site is derelict and unused and that planning permission for a technical centre was obtained by McLaren which means the site is suitable for development. To utilise such land is surely far better than developing untouched Green Belt land.

Building at Martyrs Lane would allow for the provision of Affordable Housing and Specialist Residential Accommodation which would assist Woking Borough Council to meet its obligations in the areas.

There are very limited employment opportunities in Mayford whereas McLaren, St Peter's Hospital, Addlestone, Chertsey, Brooklands and The Byfleets as well as Woking itself are within easy reach of Martyrs Lane.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future

development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Regarding the representation on the road infrastructure in Mayford, this matter has been previously addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

In addition, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance

test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should also be noted that the other sites are of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02501/1/001

**Customer Name:** Robin Wilkin

**Summary of representation:**

Objection to development in Pyrford. Pyrford has a unique semi rural setting and is largely unspoilt with views. The fields are used for agriculture and form part of the historic setting of the area and heritage features. It is also used for recreational purposes.

The development proposals in West Byfleet will result in a significant number of new homes and is more than the existing infrastructure in Pyrford and West Byfleet can cope with.

Martyrs Lane will have the least impact on Woking overall as it is a single site and the north of the New Zealand Golf Course is almost unused. There is no landscape element, no known footpaths and not utilised by the public. Martyrs Lane is a better option for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas in Byfleet and Pyrford.

The site had planning permission for McLaren and there is no concern about the development being a risk to merger or sprawl. The site is a viable housing site.

**Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane proposal is noted.

It should be noted that as part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal

of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The representation outlining reasons against development in Pyrford have also previously been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 corridor. This work is on-going and will be completed before the DPD is submitted for Examination.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the

impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. The Martyrs Lane site is currently used for a number of uses including the Martyrs Lane Recycling Centre and the New Zealand Golf Course as well as several private residential properties.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is considered that all of the proposed safeguarding sites, including Martyrs Lane, would be economically viable for residential development. There is therefore no advantage for the Martyrs Lane site on this particular matter.

**Contributor Reference:** 02545/1/001  
**Customer Name:** Ms Linda Kemeny

**Summary of representation:**

The site is large enough to accommodate the known housing requirement plus necessary infrastructure without development of the New Zealand Golf Course.

This area could support a single development location rather than spreading the release of green belt in different areas across the borough.

It is close to major transport links, including the M25, A320, A3, Heathrow Airport and easy railways links to Guildford and Waterloo. The other sites in northeast and southwest Woking have poor surrounding infrastructure and road connectivity. The A320 between Woking Town Centre and the M25 could also be more easily widened. Far fewer existing residents will be affected by development.

Planning approval has already been given for McLaren on the site. This land is largely scrub land in appearance with little in the way of attractive features, unlike some of the earlier proposed sites which are of natural beauty such as the Hook Heath Escarpment.

Support the Martyrs Lane proposal.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on infrastructure provision, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation about the

Hook Heath Escarpment. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

**Contributor Reference:** 02546/1/001  
**Customer Name:** Mrs Sarah Elaine Alexander

**Summary of representation:**

Object to development in Pyrford.

The road network in Pyrford near the school is at capacity and dangerous. Development will make the situation worse.

Development will also spoil the character of the village.

Martyrs Lane site would be a better option. Pyrford fields are used for agriculture and contain footpaths. There are no footpaths near the Martyrs Lane site and it will impact far fewer people.

A single site at Martyrs Lane will provide greater economy of scale to address the many infrastructure issues.

The site is partly derelict and unused by the public.

**Officer Response:**

Objection to development in Pyrford and support for Martyrs Lane is noted.

The representation against developing in Pyrford has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

Regarding infrastructure provision generally, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02548/1/001  
**Customer Name:** Mr Peter Ferguson

**Summary of representation:**

Concerned about the destruction of Green Belt and development destroying local character and valuable green spaces. High density development would also be out of keeping with this part of Woking.

Development would result in the loss of an important historic golf club.

**Officer Response:**

As set out in Section 1.0 and 2.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national policy. Although the Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land in the borough, it has ensured through a number of studies that any land that is released from the Green Belt will not undermine its overall purpose and integrity. The total amount of land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.5% and therefore the amount being proposed is relatively modest.

Most of the housing need for the Borough is internally generated. Consequently, it is envisaged that planning to meet that need should not undermine the overall social fabric of the area. There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

Regarding the loss of the New Zealand Golf Course, if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes. In addition the Council has consulted with Sport England during the consultation and their comments will be assessed and considered as part of the process.

**Contributor Reference:** 02425/1/001  
**Customer Name:** Mr And Mrs Denis And Kathleen Chia

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02428/1/001  
**Customer Name:** Mr Chris Sears

**Summary of representation:**

Agrees to the Martyrs Lane proposal.

If there is no choice in building 1024 homes locally then this site would have far less impact than the other sites.

The proposed new development of over 200 dwellings in West Byfleet should be used against the 1024 dwellings.

The loss of Green Belt is a shame but the loss of the fields in Pyrford would be unforgivable. They have pleasant views towards the Surrey Hills.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

The Council is fully committed to the comprehensive delivery of the Core Strategy which seeks to deliver 4964 dwellings as well as a significant amount of retail and commercial floorspace between 2010 and 2027. The purpose of the Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding option. This would be to ensure the Council has sufficient land to meet development needs for the next plan period, between 2027 and 2040. The Martyrs Lane consultation anticipates that the site can deliver at least 1200 dwellings and therefore is broadly similar to the cumulative capacity of the six original sites.

Regarding the impact of development on the local area, this is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Although the representation regarding 200 units is not site specific, it should be noted that any recent planning application or permission will help to deliver the housing requirements of the Core Strategy. As set out above, this is for 4964 dwellings up to 2027. The purposes of safeguarding land for future development needs is to ensure the Council is able to meet its housing requirements for the next plan period. Therefore the 200 units highlighted in the representation can not be discounted from the amount of development or safeguarded land required for the next plan period.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is

consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The representation highlighting reasons against development in Pырford has also been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

The road adjacent to Pyrford School is dangerous and development will make the situation worse.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for

safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the

safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and

jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

As set out above, the Council is working with the County Highways Authority to identify the impacts of development on the road network and the necessary mitigation measures required to make the development acceptable. This would also be carefully considered at the Development Management stage for any of the proposed allocated or safeguarded sites in the Site Allocations DPD.

**Contributor Reference:** 02435/1/001  
**Customer Name:** Mrs Madeleine Key

**Summary of representation:**

Writing to reinforce the argument for replacing the current proposed 6 sites with the Martyrs Lane development.

It is the best opportunity for development as all housing requirements could be met on one site that has accessibility to the M25 and Woking. It will also have the least disruption to local communities.

Surely the arguments against development on the other sites including the financial costs of development would be outweighed by using one single site with a partial history of development.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Regarding the anticipated capacity of the site, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

In making a decision on its preferred Green Belt sites for allocation and safeguarding the Council has to ensure that the sites selected are the most sustainable compared to all reasonable alternatives. The Council also has to ensure that its preferred sites will not undermine the overall purpose and integrity of the Green Belt. These decisions will need to be supported by robust evidence.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Ms Fiona Dunstan

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. **Summary of representation:**

Objects to the Martyrs Lane proposal.

The key principle behind the concept of Green Belt is the prevention of urban sprawl. The Martyrs Lane site provides a valued green buffer between the northern side of Woking and settlements beyond. The proposal would extend the urban area significantly and would be in direct contradiction of the purposes of Green Belt.

The other sites have some existing spare infrastructure capacity and would be able to absorb a relatively small population increase compared to a single site with no existing facilities. Martyrs Lane would require significantly more investment.

The road network, including the A320 and A245 are at capacity and Surrey County Council studies show that the Six Crossroads Roundabout and the roundabout at the end of Sheerwater Road are major congestion hotspots. Even if development was limited to 1200 units, the traffic impact would be significant.

This consultation should be seen in the context of the overall Borough social and economic policy. Good road communications are vital for maintaining Woking's attractiveness for businesses and investment. The A320 is a vital link to the M25 and the national road network. Martyrs Lane would have a significant adverse impact on this link and therefore on the local economy.

The Sheerwater Regeneration Scheme is in close proximity and local residents would be subject to two significant developments. Fairness would demand a greater spread.

Horsell Common is a highly valued amenity by all residents and objections raised by Horsell Common Preservation Society are compelling and supported.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The representation regarding urban sprawl and the purposes of Green Belt, the provision and funding of infrastructure to support development and the impact of the Martyrs Lane proposal on the existing road network have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The economic impacts of development at all of the proposed sites have been considered by the Council as part of the Sustainability Appraisal. This is on the Council's website and will form

part of the evidence that will inform the Council's decision on its preferred safeguarding option.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater. This is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure.

The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding. This may not necessarily result in an even spread of development across the borough.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The representation submitted as part of the consultation by Horsell Common Preservation Society will be considered and addressed separately.

**Contributor Reference:** 02533/1/001  
**Customer Name:** Mr Douglas Elbourn

**Summary of representation:**

Support the Martyrs Lane proposal.

There would be economies of scale from developing on a single site.

Fewer residents would be impacted by any necessary development, and the semi-rural character enjoyed by the other sites, and crucial to Woking's localities, would be preserved.

The Martyrs Lane site is served by public transport, which would mitigate the increased traffic from the development.

The site provides better access to local businesses, employers, commuter links and Woking town centre.

Planning permission has already recently been granted for part of the site.

Development could take place without having to utilise the part of the site occupied by the New Zealand Golf Course.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites. It should be noted that the overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs

Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

**Contributor Reference:** 02534/1/001  
**Customer Name:** Ms Hilary Cheetham

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs.

Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land

classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Gladman Developments Limited

**Summary of representation:**

The proposal represents an unsound approach. The DPD must meet the four tests of soundness:

- Positively prepared
- Justified
- Effective
- Consistent with national policy

The Council commissioned a Green Belt boundary review to recommend sites to be removed from the Green Belt. Land to the east of Martyrs Lane was assessed as part of a wider review and the report concluded that it is not appropriate for the site to be released from the Green Belt. The proposed change of direction cannot be justified against this evidence base; and the proposed allocation of sites would not be considered consistent with national policy (paragraph 85 of the NPPF provides guidance on Green Belt boundaries, against which the Green Belt review was conducted).

The level of safeguarded land being proposed is insufficient to ensure that the new boundaries can take on a permanent nature without reliance on further Green Belt release for the next plan period; thus conflicting with para.85 of the NPPF regarding Green Belt reviews.

The proposal would result in the DPD not being positively prepared or effective. Reliance on one large site to deliver housing beyond the plan period is not sufficiently effective or a positive approach to meeting future development needs. Further release of safeguarded land is needed (rather than a substitution) as the full Objectively Assessed Need (OAN) is not currently being addressed; and a change of circumstances regarding housing could occur e.g. with new government policy. Failure to safeguard sufficient land to ensure the full OAN can be met is likely to result in a worsening of affordability in Woking and pressure on the Green Belt for further release.

The Council cannot justify how the proposal is the best option when considered against the reasonable alternatives. Evidence demonstrates that the land would not be able to accommodate significant change without significant adverse effects on the landscape pattern and features; and it would leave an area of development unconnected to the urban area. It would make a significant incursion into the Green Belt, with only very limited impact on the Council's ability to deliver new housing. Disregarding these conclusions would be unjustified. The Council stated in responses to the Regulation 18 consultation that allocations in the DPD were the most sustainable when compared against the reasonable alternatives; and that no other sites could be identified in the Green Belt for development purposes without significant damage to its purpose and integrity. Gladman would ask what has changed that results in this no longer being the case. New evidence would need to be brought forward demonstrating the

proposal is also a sustainable option for Green Belt release, and that it wouldn't damage the purpose and integrity of the Green Belt.

If justification is available to support the release of land at Martyrs Lane, it should be taken forward in addition to the safeguarded sites.

**Officer Response:**

Objections are noted.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document, and as cited in the representation, will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The inclusion of the golf course in the proposal would effectively ensure that any proposed development would be connected to the urban area, and solve the problems highlighted in earlier assessments whereby development of northern parts of the site would lead to an area of development unconnected to the urban area (as cited in the representation). However, the conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to a degree of urban sprawl and a potential

perception of towns merging. Officers have also noted the conclusion of the report regarding the contribution that the site makes to overall landscape character of the area and agrees with the representation. These considerations would be two of a number of material considerations that the Council has to take into account in making its decisions about the preferred approach to safeguarding.

It is, however, important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors. Further detail on this issue is given in Section 10 of the Duty to Cooperate Bodies Topic Paper.

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites came about due to a change of circumstances with land owned by McLaren since the publication of the Regulation 18 version of the DPD. This is set out in detail in Sections 3 and 5 of the Duty to Cooperate Bodies Topic Paper. This significant change of circumstances that was not previously considered justified the testing of this land in combination with other adjacent sites – including the golf course – as a reasonable alternative. The LDF Working Group gave clear reasons why the land should be identified for consultation, and this is documented and available on the Council's website. In order to comply with paragraph 182 of the NPPF, and therefore be consistent with national policy, it would have been irresponsible of the Council if it did not at least consider the proposal as a reasonable alternative in light of the change of circumstances regarding the land in the ownership of McLaren. The consultation document includes a list of some of the evidence base used to inform the Council's decision on the matter, but it should also be noted that the representations received on the consultation are also a relevant source of information.

Section 1 of the Duty to Cooperate Bodies Topic Paper sets out in detail the Council's response to the suggestion that the Martyrs Lane site should be brought forward to meet current unmet housing needs, and whether it should consider allocating the land in addition to the original six safeguarded sites. Section 4 of the Topic Paper also explains how the Council is satisfied that the housing requirement is unlikely to change significantly; and how it may even come down in the future. The Council is confident that its preferred approach will not jeopardise the delivery of affordable housing or affordability in general, nor put pressure upon the Green Belt for further release, and will be consistent with national policy.

For the Site Allocations DPD to be found sound, the Council has to identify the most sustainable land to meet its future development needs. This must be the most sustainable when compared with all other reasonable alternatives. A lot of studies have been undertaken to enable the Council to make an informed decision on this matter. The spatial distribution of development is therefore driven by sustainability and not whether a single, large site or multiple sites are identified. The Council is satisfied that a reliance on one large site to deliver its future housing need would not make the plan ineffective or be considered a negative approach towards meeting future development needs of the area.

The Council does not disagree that it made the statements cited in the representation. Section 5 of the Duty to Cooperate Bodies Topic Paper provides a detailed response to this issue.

Paragraph 182 of the NPPF requires the Council to submit a Site Allocations DPD for Examination that it considers is sound. That is exactly what the Council will do and this will minimise any risk of the DPD being found unsound. In particular, the Council would only safeguard land that it considers are the most sustainable based on proportionate evidence when compared against other reasonable alternatives.

**Customer Name:** Mr Scott Harris

**Summary of representation:**

Summary of representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02371/1/001  
**Customer Name:** Mr Chris Newell

### **Summary of representation:**

On balance, despite all sites being in the Green Belt, supports the proposal, excluding the golf course.

- o The top part of the site was recently granted planning permission
- o There is currently no public access to the land
- o A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools, possibly social housing, GP surgeries, traffic volumes, waste water, etc.
- o The northern part of the site is well served with public transport, unlike the other six sites
- o The northern part of the site has access to the A320 via a roundabout, with its direct road links to the M25 and to Woking town centre
- o The northern part of the site is close to major local employers, like St Peter's Hospital and the Animal & Plant Health Agency
- o Much of the northern part of the site has already been used for non-agricultural purposes
- o Part of the northern part of the site is publicly owned land, so the sale would help council tax payers
- o Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without

the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02375/1/001

**Customer Name:** Ms Fiona Bell

**Summary of representation:**

Objects to the proposal.

Access to M25 and onto M3, M4 and A3 would be adversely affected – additional traffic cannot be accommodated.

It's a wet area – flooding is a concern.

Woking/West Byfleet train services would be overloaded – there are no seats. Woking would become a less attractive area to live.

Would be disappointed to see Woking's decline.

**Officer Response:**

Objections are noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses these issues in detail, including traffic impacts; flood risk assessment; and infrastructure provision and improvements.

The Council is currently updating its Infrastructure Delivery Plan to reflect the preferred sites in the draft Site Allocations DPD. If this site were allocated for safeguarding, the Council would work with railway infrastructure providers and train operators to ensure that an adequate service is provided taking into account future housing growth.

**Contributor Reference:** 02378/1/001  
**Customer Name:** Mr Nick Forde

**Summary of representation:**

Objects to the proposal.

Unnecessary loss of Green Belt land in an area of important woodland and conservation. Would result in urban sprawl (particularly with Fair Oaks development), and loss of character in this area due to high density housing.

Lack of capacity in road infrastructure – demonstrated by the recent road works causing congestion. This will decrease connectivity to M25 and beyond.

Woking would therefore become less attractive to live and work in.

**Officer Response:**

Objection is noted.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for the release of Green Belt land (see Sections 1 and 2).

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses the issues raised in the representation in detail, including: assessment of the land for Green Belt purposes and likelihood of urban sprawl and loss of character; impacts on woodland and biodiversity; infrastructure provision, including transport infrastructure; and traffic impacts.

It should be noted that the Development Plan for the area contains robust design policies which would require development proposals to respect and make a positive contribution to the character of the area in which they are situated. There are also policies which provide indicative density ranges, which are appropriate to the area and ensure that densities do not affect the quality and character of an area and the general well-being of residents.

The Council is working in partnership with the County Council and neighbouring boroughs to explore and determine development impacts of proposed sites, including the Fair Oaks proposal. This work is on-going as part of the Council's Duty to Cooperate, and will be completed before the DPD is submitted for Examination.

**Contributor Reference:** 02383/1/001  
**Customer Name:** Ms Marian Bendle

**Summary of representation:**

The site is big enough to accommodate 1200 houses, including affordable housing, and the necessary infrastructures of shops, primary schools, health centre etc., without encroaching on the golf course.

There are advantages in the creation of a single new housing estate rather than several dispersed small ones. It is much easier to create the associated infrastructure rather than overloading existing over stretched facilities.

It will also simplify the process for obtaining planning permission.

The A320 gives easy access to the M25 and Heathrow Airport, and to Woking town centre and mainline railway station to the south without encountering the traffic delays were roads cross railway lines. Bus lanes and cycle lanes to Woking town centre, exist already. This is a better proposal than the option of building south of Woking where the Main road is often congested.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300

dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served

by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Contributor Reference:** 02388/1/001  
**Customer Name:** Ms Anne Smith

**Summary of representation:**

Objects to the proposal as the land is critically important in checking urban sprawl and safeguarding the countryside.

One huge site would have an impact on infrastructure – better to have several smaller sites.

It would necessitate the use of a car to travel to local facilities e.g. doctor surgery, schools, shops, playgrounds – on already busy and congested roads.

Parts are subject to flooding.

The site was not recommended in the Green Belt boundary review, nor given Officer support.

**Officer Response:**

Objection is noted.

The Woodham and Horsell Issues and Response Topic Paper sets out in detail a response to the issues raised, including likely impact on urban sprawl and integrity of the Green Belt; infrastructure provision and accessibility to local facilities; traffic impacts; and flood risk assessment.

It also sets out the reasons behind the consultation and the justification for it.

**Contributor Reference:** 02389/1/001  
**Customer Name:** Ms Teresa Bacon

**Summary of representation:**

Prefers this proposal as the environmental impact is less severe than developing six separate sites across the Borough.

Easier to serve a single site with required infrastructure e.g. road access towards M25, GP surgeries, schools; rather than squeeze substantial pockets of development into areas with overstretched facilities.

Easier to meet affordable housing and social housing requirements.

Currently lacks public access.

Parts are semi-derelict.

The other sites are widely used by residents and its loss would be felt more widely.

There would be less disruption to the general public during the development phase if only one area of Woking was involved.

**Officer Response:**

Support is noted. The merits of the proposal as set out in the representation will weigh in the balance of considerations by Members.

It is not envisaged that the development of any of the site options would compromise the environment or lead to impacts which cannot be satisfactorily mitigated. The Development Plan for the area has robust policies to make sure that development proposals contribute to the enhancement of existing biodiversity and geodiversity features, and explore opportunities to create and manage new ones where it is appropriate. Any development that is likely to have a potentially harmful impact or lead to a loss of features of interest for biodiversity would be refused.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council is working with infrastructure providers as part of its work to update the Infrastructure Delivery Plan to ensure that capacity in existing infrastructure is sufficient to accommodate new housing; and if not, to provide new infrastructure accordingly.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that some of the land within the Martyrs Lane site contains existing semi-derelict structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition,

development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02390/1/001  
**Customer Name:** Mrs Nora Goodman

**Summary of representation:**

Objects to the proposal.

Queries the point of consultations. Has asked if any of the 32,712 representations to the Regulation 18 consultation exercise resulted in any modifications, but has received no answer. Queries whether consultations are just box-ticking exercises.

The development would result in a new town, causing congestion on roads which are at maximum capacity. There is too little parking in West Byfleet, including at the station, to accommodate more cars in this area. Cars frequently park in roads to the detriment of the residents. Where will new residents park if they wish to shop in West Byfleet, also taking into consideration the Sheer House development?

The development would require huge investment in infrastructure and services.

There is too much development planned on Green Belt in this area of the Borough.

**Officer Response:**

Objection noted.

The Council has carefully considered and responded to each of the Regulation 18 consultation representations, and its response is available on the website. As a result of the consultation exercise, over 100 modifications have been made to the next iteration of the draft Site Allocations DPD thus far. These will be available to comment on at the next consultation stage: 'Regulation 19' consultation. The Council believes consultation responses make a valuable contribution to the evidence base for the preparation of Development Plan Documents.

The issues raised in the representation concerning traffic impacts (including those in West Byfleet), infrastructure provision (including public transport) and likely impacts on the Green Belt are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

Transport studies undertaken by the Council confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development. Examples of mitigation measures

might include providing/improving public infrastructure in the area, to reduce travel by car and subsequently reduce the need for parking.

Whilst the Council sympathises with the concerns of local residents over the loss of Green Belt in the West Byfleet area, it has ensured through a number of studies that any land released from the Green Belt will not undermine its overall purpose and integrity. It is important that development is directed to the most sustainable locations of the Borough when compared with reasonable alternatives, and it is within this broad spatial strategy context that sites are allocated for development. The spatial distribution of development is driven by sustainability and not by Ward boundaries .

The objections to the proposal as put forward in the representation are noted and will weigh in the balance of considerations by Members.

**Contributor Reference:** 02391/1/001  
**Customer Name:** Ms Yvette Bolton

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes, and taking into account the more reasonable cost of this land.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Nicholas Miller

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02396/1/001  
**Customer Name:** Mr Ian McLellan

**Summary of representation:**

Supports the proposal, excluding the golf course, in favour of developments in Pyrford.

A single site is preferable due to economies of scale and potential to provide community services such as health centre, school and affordable housing.

**Officer Response:**

Support is noted, and the merits set out in the representation will weigh in the balance of considerations by Members.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Customer Name:** Mrs Leonora Humphreys

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part contains previously development land.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming

the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is

specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land

classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Ms Gillian McLellan

**Summary of representation:**

Supports the proposal, excluding the golf course.

It will provide greater economies of scale and can allow for additional community services such as health centre, school and affordable housing.

**Officer Response:**

Support is noted, and the merits set out in the representation will weigh in the balance of considerations by Members.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Contributor Reference:** 02400/1/001  
**Customer Name:** Mr Tom Leader

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course. Difficult as all are in the Green Belt, however, overall impact on countryside, amenity, transport infrastructure, ecology and environment would be considerably less if Martyrs Lane site were safeguarded, particularly in favour of pristine Green Belt around Pyrford.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land, reducing public amenity impact. This 'infill' land is also surrounding by busy, existing urban environment and infrastructure, therefore green belt impacts are less than the alternatives.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre, and road network is better able to cope with traffic.

It is close to major employers and previously developed for non-agricultural purposes (rather than the pristine agricultural land in Pyrford).

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by construction at one site then by six individual sites.

Reduced visual impact as the site is visually low profile and well hidden.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted, and merits as put forward in the representation will weigh in the balance of considerations by Members.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites, including those in Pyrford, are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Although it is acknowledged that the site is screened by mature vegetation and borders on some sides from the existing urban area, the Council must consider the overall impact on the integrity of the Green Belt and landscape character if the site were safeguarded. The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, it could be considered that development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt. The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and

associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition,

development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

**Customer Name:** Mr Peter Hill

**Summary of representation:**

Supports the Martyrs Lane proposal, in favour of retaining Green Belt status of original sites.

Agrees with Hook Heath Residents' Association's submission to the consultation.

Safeguarding the originally proposed sites would put unacceptable pressure on already inadequate infrastructure.

The site is large enough to accommodate 1200 homes, including affordable housing, and the necessary infrastructure. There are opportunities to 'master plan' development, whilst taking into account the wishes of the local community (provided they are encouraged to participate).

There are major employers close by.

The site has no national or local landscape designation unlike the other sites.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

**Officer Response:**

Support for the Martyrs Lane site is noted, and the merits of masterplanning a single site as put forward in the representation are noted and will weigh in the balance of considerations by Members.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites. The Development Plan for the area contains robust design policies which would apply equally to the Martyrs Lane site and original six sites, as they are all of a scale which would enable effective masterplanning, with community involvement.

The Council has responded to the Hook Heath Residents' Association representation separately, and is available to view.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary

infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council is currently updating its Infrastructure Delivery Plan, working with infrastructure providers to ensure there is capacity in existing infrastructure to support future housing development as envisaged in the draft Site Allocations DPD, and if not, that adequate infrastructure is planned for.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the

representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

**Customer Name:** Anthony's Resident Association

**Summary of representation:**

Object to the proposal on following grounds:

Loss of Green Belt;  
Urban sprawl and Fair Oaks;  
Flood Risk;  
Transport – Roads;  
Transport – Public;  
Achieving sustainable development;  
Infrastructure;  
Wildlife;  
Woodlands;  
Flight path.

Support the points in the letter submitted by the Horsell Common Preservation Society.

**Officer Response:**

Objection is noted. The issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council has considered and responded to the Horsell Common Preservation Society representation separately, which can be viewed for further details.

**Contributor Reference:** 02363/1/001  
**Customer Name:** Mr Martin Scott

**Summary of representation:**

Supports the proposal as it is between well-connected roads and it is not on virgin Green Belt land (unlike that at Upshot Lane).

**Officer Response:**

Support is noted.

Although the Martyrs Lane site is located near to well-connected roads, the traffic impacts on these roads must be taken into account. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

With regards to the impact on Green Belt land: the Green Belt boundary review (by Peter Brett) assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

**Contributor Reference:** 02364/1/001  
**Customer Name:** Mr Patrick Bennett

**Summary of representation:**

Supports the proposal in favour of destroying productive agricultural land in Pyrford. Better to exploit derelict land near the dump, and encroach upon the ugly and sterile pine woodlands north of the canal.

The Stop Woodham New Town campaign seems somewhat hysterical.

**Officer Response:**

Support is noted.

It is correct that some of the land within the Martyrs Lane site contains existing derelict structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites, including those in Pyrford, are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The opinion relating to the ugly and sterile nature of the land are noted. However, the Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green

Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors. Other sections of this Issues and Matters paper address some of these other factors in detail.

**Contributor Reference:** 02369/1/001  
**Customer Name:** Mr And Mrs H S Conway

**Summary of representation:**

Support the proposal, excluding the golf course, and with concern about the increased congestion it will cause on surrounding roads and amenities.

1. Previously developed land. The Martyrs Lane site is on Green Belt land, some of which has been previously developed – which is not true of the other proposed sites.
2. Infrastructure. The A245 through West Byfleet and over the M25 bridge has no spare traffic density capacity left, especially when other new developments in the area are taken into account.
3. Developing one site for the future housing needs of Woking would probably mean economies of scale and would help solutions to local infrastructure concerns.
4. Amenity value – Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.
5. Heritage – the heritage features of the area around the two Pyrford fields include the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a SNCI, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area.
6. Landscape. Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.
7. Agriculture. Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

**Officer Response:**

Support is noted.

The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs.

Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

Although some parts of the land are previously developed, the sites are still washed over by the Green Belt designation. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. Peter Brett's Green Belt boundary review report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land (if the Golf Course were not included) would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt. The conclusion of both studies demonstrate that, despite parts of the site being previously developed, the area makes an important contribution to the purpose of the Green Belt – the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

The Council has worked in partnership with Surrey County Council to study the traffic implications of the various development options. The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, as expressed in the representation, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst the Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA, including those in Pырford. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features and locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage and landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

**Contributor Reference:** 02372/1/001  
**Customer Name:** Ms Caroline Scannella

**Summary of representation:**

Objects to the proposal.

New homes should be sustainable within the borough without placing all of the burden on a single ward. Using several sites over the borough would be far more sustainable and have less overall impact on the borough infrastructure facilities.

Completely agrees with Woodham and Horsell residents' association objections on all grounds.

**Officer Response:**

Objection is noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper sets out in detail the Council's response to issues raised in the representation, including directing development onto a single site, in a single ward, and provision of infrastructure.

**Summary of representation:**

Supports the proposal, excluding the golf course.

Reasons in support of the designated Martyr's Lane site are:

The top part of the site includes pre-developed land used as a wartime army camp; and now derelict; this area was also recently granted planning permission for a technology centre;

A single site would offer economies of scale with regard to the infrastructure issues arising from the building of more homes, and there would be less disruption for Woking residents;

The northern part of the site is well served with public transport unlike the other six sites;

The northern part of the site has access onto the A320 with road links to the M25 and Woking town centre. There are therefore good links for commercial and employment purposes to the towns in Runnymede, Elmbridge and Spelthorne boroughs.

Development at Martyrs Lane would save further congestion in Woking town centre and prevent even more overload on the Parvis Road/Byfleet Road route which has already reached saturation point, soon to be added to by the planned developments in the adjacent areas in West Byfleet/Byfleet.

**Officer Response:**

Support noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs.

Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25, and also on the A245 Woodham Lane/Sheerwater/Parvis Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts, including from those in adjacent areas such as West Byfleet/Byfleet. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Summary of representation:**

Objects to Green Belt land release in favour of brownfield development, but recognises requirement for a Green Belt review and land to the east of Martyrs Lane demonstrates a number of benefits:

- lack of national or local landscape designations;
- significant portion disused and derelict and planning permission has historically been granted for McLaren;
- size of site allows WBC to meet its housing needs to 2040 with ease: site could accommodate 1200 houses including affordable housing with supporting infrastructure such as a primary school and local shops; such diversity of housing with integrated infrastructure could not be achieved on several dispersed smaller sites.
- site near major employers including St Peters Hospital, McLaren Technology Centre. The Animal and Plant Health Agency. The growth of a new community on this site would provide additional local employment opportunities.
- well served by transport links with easy access to the A320, the M25, a railway station at nearby West Byfleet and bus and cycle links.
- it provides a unique planning opportunity for WBC to create a sustainable community that meets the housing needs of the borough from 2027 onwards.

**Officer Response:**

Support for Martyrs Lane is noted, and the merits of the proposal as set out in the representation will weigh in the balance of considerations by Members.

The Regulation 18 Consultation Issues and Matters Topic Paper describes in detail the justification for releasing Green Belt land (see Sections 1 and 2), and how brownfield land has been prioritised (Section 11).

Regarding the representation on landscape designations, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future

development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their location and size. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy

that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

### **Summary of representation:**

Do not support the proposal to safeguard the site to the east of Martyrs Lane in place of the sites identified for safeguarding within the Draft DPD. The main concerns relate to the following issues:

Fundamental concerns over the prospects of site availability and therefore the developability of the site as a whole. There are also concerns over its ability to achieve the level of housing assumed by the Council.

It is widely known that the owners of the New Zealand Golf Club have no intention whatsoever to sell their land for development and understand that they have asked the Council to exclude their land from the site area. There is no evidence that the Club will change their views and therefore would render the proposal undeliverable. The Site Allocations DPD would be unsound and would also undermine the objective of achieving certainty and permanence for Green Belt boundaries which the Council has stated is fundamental to the long-term development strategy of the local plan.

Given the availability of reasonable alternative Green Belt Sites for safeguarding, there is no scope for the Council to use Compulsory Purchase Powers to acquire the Golf Club. Equally, given the location and extent of the Golf Club, there is no possible justification for seeking to focus any future development on the land to the north of the Golf Club. This approach would amount to inappropriate and unsustainable development, isolated within the countryside and not represent a sound basis for safeguarding for the borough's long term development needs.

The proposal therefore fails the test of being a developable site as defined by Footnote 12 of the NPPF. The importance of the availability of sites is also set out in the Council's Regulation 18 consultation Issues and Matters Topic Paper.

Even if the New Zealand Golf Course position were to change, there is uncertainty over the suitability of the Martyrs Lane site and would make for a much less suitable site for safeguarding compared to the alternative sites in the draft Site Allocations DPD, in particular the sites to the south of Woking and to the north and northwest of Mayford.

The Martyrs Lane site was assessed as part of the Green Belt boundary review report as Parcel 2. Within the main assessment of the parcel it is clear that the previously permitted, and now revoked, planning permission for McLaren was material to the assessment and is likely to have influenced the assessment outcome for Green Belt purposes 1 and 2 in particular. This is a significant change in the way in which Parcel 2 can be expected to perform against the main Green Belt purposes and consider that it is essential that the Parcel is reassessed in light of the decision to revoke the planning permission. Without this accurate assessment, it is not possible to conclude how Parcel 2 performs relative to the other parcels in the report.

The landscape character and sensitivity to change assessment in the report clearly demonstrate that Parcel 2 should not be released from the Green Belt. It also states that any further significant development would have significant adverse impacts on the landscape character. Allowing for the need to reassess the Parcel as stated above, the conclusions from the report are clear and it is therefore difficult to see what justification the Council has in now seeking to substitute this site for the original six sites.

The site has very significant potential to contain protected habitats and species and other features of ecological note. There is concern that the proposal is likely to lead to a significant adverse impact on the Thames Basin Heaths SPA to the west of the site at Horsell Common. This could be caused by recreational disturbance and potentially reductions in air quality or a combination of the two. The Habitats Regulations Assessment which accompanied the Martyrs Lane consultation, side stepped the issue and assumed that the process of HRA screening for the site could be postponed until the review of the Core Strategy or Site Allocations DPD. This is not justified or appropriate given that the whole purpose of safeguarding is to provide certainty as to the long term location of development and consequently provide a permanent Green Belt boundary.

Based on the above, it is therefore uncertain whether it will be possible to mitigate the impact of the substantial level of development proposed for the site. For example, whilst it would be possible to avoid developing within the 400m SPA Exclusion Zone, a significant number of new homes within walking distance of Horsell Common is likely to result in significant recreational disturbance, irrespective of the provision of additional on-site SANG capacity.

From visitor research in 2012, Horsell Common is identified as one of the most frequently visited sites across the entire Thames Basin Heaths SPA. It seems unlikely that the provision of onsite SANG would be capable of diverting a sufficiently high proportion of the additional recreation disturbance to avoid adverse effects on the SPA. Following the 'precautionary principle' required by the Habitats Directive 1992 and saved policy NRM6 of the South East Plan, it is considered that additional evidence to support the updated HRA should be sought now to inform the emerging Site Allocations DPD.

There is no justification to remove the original six safeguarded sites from the Site Allocations DPD. These sites were all duly assessed by the Green Belt boundary review, in accordance with the process established in the Core Strategy, and were found to be suitable for release from the Green Belt and capable of contributing to the long term development needs of the Borough. This conclusion was also broadly supported by other evidence, including the Strategic Transport Assessment and the Council's Sustainability Appraisal.

It is therefore illogical and potentially irresponsible to now contemplate replacing these sites for the land to the east of Martyrs Lane.

The Green Belt boundary review recommended that Parcels 4, 6 and 20 would be suitable for releasing from the Green Belt and also stated that no other parcels would be suitable for removal from the Green Belt to accommodate new strategic development.

Despite the Council receiving a number of representations against the proposed sites in the draft Site Allocations DPD, in June 2016 it was clear in the consultation response topic paper that the Council stood by its evidence based process for the identification of Green Belt sites. The Council had every opportunity in the topic paper to explain why, having considered the various consultation responses alongside other evidence, that it wished to make a significant change of course in terms of safeguarding sites for delivering long term development. This highlights that the Martyrs Lane proposal is a matter of political preference by the Council and demonstrates that the Council is contemplating a grave and unwarranted departure from the evidence based process by which the Council was previously progressing the Site Allocations DPD.

Sites GB10 and GB11 are now no longer being proposed for safeguarding and will be retained within the Green Belt. Other than paragraph 1.9 of the Martyrs Lane consultation document which states that there were a number of consultation responses to the draft Site Allocations DPD, there is no clear justification provided for this change in approach.

South Woking has been identified as an appropriate and sustainable location for strategic development since the Draft Surrey Structure Plan (2002) which proposed up to 2000 homes as an extension south of Woking. The possibility of development in this part of the borough was also referenced in the South East Plan. This chronology confirms that Green Belt releases to the south of Woking should be a key focus of meeting longer term development needs.

The assessment of Parcel 20 of the Green Belt boundary review concluded that development would not cause a material reduction to the gap between the urban areas of Woking and Guildford and that the area was a genuinely sustainable location for future development. Whilst there were some landscape concerns, it was clear that the local landscape designation is not one that is substantiated through any published or ratified study. Support for safeguarding the land in Parcel 20 is also stated in the Council's Issues and Matters Topic Paper.

Based on the available evidence and supported by strategic plan making over a lengthy period of time, it is unjustified and perverse at this late stage to propose that these sites are not safeguarded for future development needs.

Concerned that the current artificially low annual housing target of 292 per year is leading to a chronic undersupply of housing within the Borough and wider housing market area. Also concerned that this long term annual undersupply of housing will make it considerably harder to resolve the shortfall when the Core Strategy is reviewed and the focus moves forward to the period ending in 2040.

Previous representations highlighted that the current housing target is too low as it was set before the Green Belt boundary review was undertaken and without reference to the potential for sites within the Green Belt to contribute to housing supply. The Green Belt boundary review has since provided clear evidence to support the release of several Green Belt parcels.

The updated SHMA (2015) identifies the Borough's OAHN which amounts to 517 new dwellings per year. Given the fundamental changes in the evidence base context, there is no longer any reasonable justification for maintaining the artificially constrained 292 dwellings per year target. Seeking to do so represents an unreasonable attempt to ignore the clear evidence that has emerged in the almost five years since the Core Strategy Inspector reluctantly accepted the current Core Strategy target as a minimum to be achieved in the absence of further evidence.

Based on the urgent need for more housing now, the decision to allocate some Green Belt sites and safeguard others was not justified within the Draft DPD and is certainly not justified under the proposals subject to the current consultation. The Council's approach to releasing Green Belt land to meet a minimum of 550 dwellings in this plan period indicates that there are no planning reasons why additional Green Belt sites cannot now be allocated to meet a higher proportion of need and comply with the NPPF requirements for flexibility.

Based on the above, the only reasonable option is to allocate the Green Belt sites GB10, GB11 and GB14 within the emerging Site Allocations DPD to contribute to readdressing the current housing shortfall.

Support the Council's commitment to identify Green Belt sites to be safeguarded for long term development needs but submit that the quantum of land proposed is woefully insufficient and has been based on deeply flawed assumptions.

Support the objectives of safeguarding land. However the failure to date to identify sufficient land for safeguarding to meet a portion of the housing needs to 2040 will inevitably require the Council to undertake a further Green Belt boundary review to seek additional release sites and will undermine the stated objective of the policy.

No concern with the assumption that 50% of future housing need to 2040 would need to be met through Green Belt release sites. It needs to be investigated further but is plausible in the absence of detailed work. Also content to assume that Green Belt sites could achieve an average of 30 dph. Reserve judgement on the assumption that 600 windfall homes may be assumed to assist in meeting housing needs to 2040 as the Core Strategy Inspector insisted that windfalls from small sites should not be counted towards future housing supply.

Greatly concerned by the assumption that the 292 dwelling target would continue up until 2040. It is an unjustified attempt to ignore both the NPPF and the Council's own evidence base. There is no evidence to support an assumption that future housing delivery should not be increased significantly to meet or at least attempt to meet the OAHN.

Even applying the Council's own unjustified assumptions, it is estimated that the level of housing supply over the 2027 to 2040 period that would need to be met from safeguarded sites would be c. 1640 dwellings. Even if the current safeguarded proposals, this would result in a deficit of 390 dwellings.

Any modest increases to any future housing target would result in a significant deficit in identified safeguarded land. Based on the assumptions set out in the representation, the amount of land proposed for safeguarding has not been appropriately identified. An additional Green Belt boundary review would therefore be necessary to identify further Green Belt sites.

Requests the Council to undertake the necessary work to identify a sufficient quantum of land to meet long term development needs. If the Council does not allocate sites GB10, GB11 and GB14 within the current plan period then these sites must be included within the sites safeguarded for future development needs.

The current consultation proposal provides a lack of clarity over site GB14. To gain greater certainty on the Council's intentions, seeking a meeting with Planning Policy to discuss how the site could contribute towards the Borough's future development needs. The site can be suitable for a mixed residential and green infrastructure scheme within the current plan period. Will provide the Council with supporting documentation shortly.

Appendix includes an assessment by Turley Sustainability comparing the sustainability of GB14 against the Martyrs Lane proposal. This includes a summary of the Council's Sustainability Appraisal of the two sites within the SHLAA and Site Allocations DPD Sustainability Appraisal. The assessment considers that by not assessing GB14 for residential purposes, it is a significant omission from the evidence base as it prevents a fair and objective comparison of all of the reasonable alternatives to ensure that the most sustainable options are identified to deliver future housing need. An SA of GB14 for residential uses is set out in the representation and states that it is a more sustainable option to meet future housing needs.

#### **Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The availability of the land will be a material consideration for its deliverability as highlighted by footnote 11 of the NPPF. It is acknowledged that if safeguarded, the land will be required for development between 2027 and 2040 and the NPPF highlights the prospect that the housing will be delivered on the site within five years. The New Zealand Golf Course has made representation to confirm that the Golf Course will not be made available for future housing development between 2027 and 2040. McLaren has also made representations to clarify that they do not object in principle to the safeguarding of the land to meet future development needs on condition that the part of the land in their ownership is allocated as a strategic employment site to meet the specific business needs of McLaren. Without both parcels of land, it would be unlikely that 1,200 new dwellings will be achieved on the site. This is a matter that the Council has to take into account when deciding its preferred approach to safeguarding. The ultimate goal that should drive the Council's decisions should be the need to achieve sustainable development and the robust evidence to justify its decisions. In this regard, if the Council decides on the available evidence that the Martyrs Lane site is the most sustainable when the available evidence has been considered, the lack of availability of parts of the land should not be an absolute constraint to the development of the entire land. The

Council has Compulsory Purchase Powers that it could use to acquire land, and the appropriate legal advice will be sought if necessary. In using the Compulsory Purchase Powers, Officers are aware that the availability of alternative sites will be a consideration. However the alternative sites should have to be in a more sustainable location for the Compulsory Purchase Powers application to fail. In this regard, the fact that alternative sites could be available on its own is insufficient to prevent the use of Compulsory Purchase Powers. In accordance with paragraph 182 of the NPPF, the Council will only submit a Site Allocations DPD for Examination that it considers sound to avoid the risk of it being found unsound, acknowledging that the judgment on soundness is in the gift of the Independent Inspector of the Secretary of State.

Regarding the representation to reassess Parcel 2, it should be noted that the Green Belt boundary review landscape character assessment provided a strategic overview of the prevailing character of the parcels and their potential sensitivity to change and potential for accommodating a strategic level of development. This included an examination of the parcels to identify their particular physical characteristics, visual characteristics and obvious perceptual characteristics. The McLaren planning permission therefore did not influence the assessment outcome as the planning permission was not implemented at the time of assessment. No further study as suggested by the representation is therefore necessary.

The Council has carried out a Green Belt boundary review (by Peter Brett Associates) and a landscape assessment and Green Belt review (by Hankinson Duckett) to assess the land east of Martyrs Lane against the purposes of the Green Belt. Based on the outcome of the studies, development of the Martyrs Lane site would lead to urban sprawl and will also have adverse impacts on the landscape character of the area. These are material considerations that the Council will take into account in its decisions about the preferred approach to safeguarding. However, consideration of the landscape character of the site is only one of many factors that will inform the Council's decisions, and the overriding goal is to identify the most sustainable site(s) when compared against other reasonable alternatives. The overall purpose of the planning system is to contribute to the achievement of sustainable development.

The decision to consult on the option of the land east of Martyrs Lane as a reasonable alternative is a legitimate one and there is evidence to justify the decision. Paragraph 182 of the NPPF deals with the examination of Local Plans. It stresses that to be found sound, a Local Plan amongst other things must be justified. The plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. It would have been irresponsible of the Council if it did not at least consider the land east of Martyrs Lane as a reasonable alternative in the light of the changing circumstances regarding the part of the land in the ownership of McLaren which occurred after the Regulation 18 consultation and when the Green Belt boundary review was carried out. The delivery of the Core Strategy will impact on all aspects of life of people who live and work in the borough. In this regard, Members and Officers of the Council has a duty to familiarise themselves with all the necessary information that might be relevant to inform their decisions about the Site Allocations DPD, which is one of the key means for delivering the Core Strategy.

The Martyrs Lane proposal is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The key requirements that will form part of the allocation of the site if it is safeguarded will ensure that the ecology of the site is fully assessed and measures of mitigation incorporated into the design of any proposal.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Whilst a detailed ecological assessment of the site has not been carried out to date, the appropriate time to undertake such a study would be at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable.

Environmental organisations such as the Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected. It is highlighted that Natural England has not objected in principle to the safeguarding of the Martyrs Lane site.

The Council accepts and has always acknowledged that the SPA should be accorded the uppermost environmental protection under the European Union Directive. The importance of the SPA is within the hierarchy of environmental designations is acknowledged in Policy CS7: Biodiversity and nature conservation of the Core Strategy. Policy CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy is a specifically crafted policy to avoid harm to the SPA as a result of development. The policy mirrors and is in general conformity with the requirements of Policy NRM6 of the South East Plan. The policy takes a precautionary approach to the protection and conservation of the SPA and development will only be permitted where the Council is satisfied that this will not give rise to a significant adverse effects upon the integrity of the SPA.

The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of

Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided adequate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the site. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. The Council is aware of surveys carried out about the locational relationship between development and the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will always learn lessons from similar existing sites and work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England submitted representation in response to the consultation. It does not have any objection in principle to the safeguarding of the site. It notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed.

Officers accept that previous evidence gathered by the Council supported the safeguarding of the original six sites to meet future development needs of the borough. The Council broadly followed the recommendations of its evidence and the draft Site Allocations DPD reflects that. However, it is also a fact that representations received as a result of public consultation is a significant source of relevant evidence, and given that it is legitimate for the Council to carry out the consultation exercise, it is critical that any evidence gathered as a result of that is taken into account before decisions on the preferred approach to safeguarding are taken. The overall goal of the Site Allocations DPD is to identify the most sustainable sites for development when compared against other reasonable alternatives. The Council will have to balance the information it receives from the consultation with its previous evidence to inform its decisions to achieve this goal.

Regarding the representation on paragraph 3.5.22 of the Green Belt boundary review, this should be seen in the context of the change in circumstances that had occurred since the Regulation 18 version of the Site Allocations DPD was published. At the time of the Green Belt

boundary review and the Regulation 18 consultation, the part of the land in the ownership of McLaren had planning approval for 60,000sq.m of applied technology centre (ref. PLAN/2011/0823) and was therefore not assessed on its own or as part of a comprehensive development of the total area. Since then McLaren has got a similar planning approval (albeit c.8,000sq.m less floorspace) to consolidate their operations at their existing site west of the A320 (ref: PLAN/2014/1297). Part of the condition for the new planning permission is that the planning approval on the land east of Martyrs Lane will be revoked when development commenced at the existing site. This is a significant change of circumstances that was not previously considered, which justified the testing of this land in combination with the other adjacent sites as a reasonable alternative. It is stressed that no decision had yet been made to substitute the land east of Martyrs Lane for the previous six safeguarded sites.

Whilst Green Belt land to the south of Woking had been previously considered as a potential direction of growth in the Borough, the Core Strategy does not identify the south of Woking as a broad location for long term residential development. The Core Strategy identifies the whole Green Belt as broad location for future growth and requires a comprehensive review of the entire Green Belt with the view to identifying the most sustainable sites for development. This approach to the Green Belt boundary review was debated at the Core Strategy Examination and supported by the Inspector. Figure 3: Areas identified for growth of the Core Strategy provides a clear illustration of this.

The findings of the Green Belt boundary review, including the assessment regarding Parcel 20, has been carefully considered by the Council. Nevertheless based on the above, it is considered to be reasonable and legitimate for the Council to consult on an alternative safeguarding option. The Local Development Framework Working Group gave clear reasons why the land should be identified for consultation and this is documented and on the Council's website.

The Council has an up to date Core Strategy that has been prepared in general conformity with the NPPF. The Core Strategy makes provision for the delivery of 4,964 net additional dwellings between 2010 and 2027, an annual average of 292 dwellings. Any suggestion that the failure to meet the objectively assessed housing need means that the Core Strategy was not positively prepared or that the Core Strategy Inspector reluctantly found the Core Strategy sound would be an incomplete interpretation of the provisions of the NPPF, in particular, paragraph 47. The Site Allocations DPD seeks to identify specific deliverable sites to enable the comprehensive delivery of the Core strategy housing requirement. The Council acknowledges that its objectively assessed housing need is 517 dwellings per year. The NPPF requires the Council to use its evidence to ensure that the Local Plan meets in full objectively assessed need for market and affordable housing in the housing market area, as far as is consistent with policies set out in the NPPF. The Core Strategy has been examined against the policies of the NPPF taken as a whole and found sound. It would therefore be unreasonable to suggest that the Site Allocations DPD should plan to meet the objectively assessed housing need for the area. In any case, it will not be the role of the Site Allocations DPD to reset the housing requirement without the proper assessment of its impacts on jobs and infrastructure provision. The setting of the housing requirement is the sole role of the Core strategy as set out in the Local Development Scheme. Based on historic housing delivery for the last 10 years and on a number

of assumptions, the Council has projected that it will continue to enable the delivery of 292 dwellings between 2027 and 2040, whilst acknowledging that an exact housing requirement can only be confirmed during the review of the Core Strategy and based on up to date evidence and policy context at the time. The approach to safeguarding should therefore be seen in this context. Against this backdrop, the Core Strategy was positively prepared and provides the necessary and appropriate strategic policy context for the preparation of the Site Allocations DPD.

Overall, the Council believes that the issue raised by the representation regarding housing targets is beyond the scope of the Site Allocations DPD. In addition it is considered that the harm to sustainable development for bringing forward the delivery of the safeguarded sites during the Core Strategy period would far outweigh the benefits for meeting the objectively assessed housing need.

The attempt by the representation to include site GB14 as part of the safeguarded sites proposed to be replaced is misleading. It is clear from the consultation document that GB14 is not a subject of the consultation.

The merits and sustainability assessment of GB14, as set out in the representation, are therefore outside of the scope of this particular consultation. As clearly defined in the Land to the east of Martyrs Lane consultation paper, the Council was consulting on the possibility of substituting the land to the east of Martyrs Lane for the six original safeguarded sites identified in the draft Site Allocations DPD. These six sites are specifically set out in paragraph 1.11 and did not include GB14: Land adjacent to Hook Hill Lane. It should also be noted that a number of these representations were submitted to the Council at the Regulation 18 consultation for which the Council will take into account in its decisions. If the intention is to promote site GB14 as a suitable site, the appropriate stage to do that will be at the Regulation 19 stage and not on the back of the Martyrs Lane consultation. It should be noted that the same Green Belt boundary review used by the representation to justify why Martyrs Lane should not be safeguarded did not recommend that site GB14 should be released to meet future development needs.

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 00525/2/001  
**Customer Name:** Horsell Common Preservation Society

### **Summary of representation:**

The land east of Martyrs Lane makes irreplaceable contribution to the purposes of the Green Belt, to the objectives and opportunities of the Thames Basin Heaths national character area, as functionally linked and supporting the Thames Basin Heaths Special Protection Area (SPA) and as a vital part of a wider ecological and landscape network.

The Site Allocations DPD must demonstrate and make sure that the most sustainable and least environmentally damaging options are being safeguarded for the future. The loss of Green Belt to meet future development needs cannot be considered on the basis of Green Belt purposes alone, albeit a very important aspect of the overall considerations. In order to execute its planning duties fully, it is anticipated that the Council will also give weight to the full range of other factors that influence the most sustainable choice for safeguarding now, to provide future development allocations. To include a site that is less appropriate than those excluded would not pass the tests of soundness. It is anticipated that the Council will consider all relevant factors and provide full justification for their preferred option.

### **Officer Response:**

The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- o To check unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

The Council has carried out a Green Belt boundary review (by Peter Brett Associates) and a landscape assessment and Green Belt review (by Hankinson Duckett) to assess the land east of Martyrs Lane against the purposes of the Green Belt. Based on the outcome of the studies, Officers will agree with the representation that the development of the site would lead to urban sprawl and an incursion into the Green Belt. It would also have adverse impacts on the landscape character of the area. This is a material consideration that the Council will take into account in its decisions about the preferred approach to safeguarding. However, as highlighted by the representation itself and emphasised by Officers in other responses, consideration of the contribution of the site to the purposes of the Green Belt is only one of many factors that will inform the Council's decisions, and the overriding goal is to identify the most sustainable site(s) when compared against other reasonable alternatives. The overall purpose of the planning system is to contribute to the achievement of sustainable development.

The Council does not accept that the development of the site would compromise the overall integrity of the nearby Thames Basin Heaths Special Protection Area and its ecological integrity and the ecology of the wider area. The site can be developed to comply with the requirements of Policies NRM6 of the South East Plan and CS8: Thames Basin Heaths Special Protection Areas

of the Core Strategy. Natural England does not have any objection in principle to the proposal, subject to the appropriate measures of mitigation being agreed. This matter has been addressed in detail in the Officer's response to the other representations made by Horsell Common Preservation Society. There is no proven functional linkage between the SPA and the site, which is of such significance to prevent the development of the site.

The Council would agree that the identification of sites to be released from the Green Belt for development should not solely rest on the contribution of the site to the purposes of the Green Belt. It is clear from the draft Site Allocations DPD and the Martyrs Lane consultation document that the Council has relied on a range of studies, evidence and factors to inform the selection of site. This includes sustainability appraisal, transport assessment, landscape assessment, flood risk assessment, viability, availability and sustainability of sites. The list of evidence used to inform the Site Allocations DPD can be found in Appendix 1 of the draft Site Allocations DPD and on the back of the Martyrs Lane consultation document. The attention of the public has been drawn to the evidence to inform their representations.

Paragraph 182 of the NPPF requires the Council to submit a Site Allocations DPD for Examination that it considers is sound. That is exactly what the Council will do and this will minimise any risk of the DPD being found unsound. In particular, the Council would only safeguard land that it considers are the most sustainable based on proportionate evidence when compared against other reasonable alternatives.

**Summary of representation:**

Strongly supports the proposal for developments on the Martyrs Lane site.

Pyrford Green Belt areas is enjoyed and has public access and Martyrs Lane sites is largely derelict and an eye sore.

The Martyrs Lane sites have the greatest economy of scale, cost effectiveness in terms of all infrastructure needs and being centralised on one area would cause minimum disruption to traffic and the area as a whole.

The NZ Golf Club if not encompassed at this stage is a facility enjoyed by a small minority of members most of whom are not residents in the area and would provide ideal scope ,with minimal disruption, for subsequent development phases.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Whilst local residents do not directly benefit from the New Zealand Golf Club, the course is identified as a sports and recreation facilities in the Borough, and the loss of it would conflict with relevant policies of the Development Plan for the area. As with most of the golf courses within the Borough, the course provides an element of amenity and biodiversity value.

**Contributor Reference:** 02471/1/001

**Customer Name:** Mr Guy Miller

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02973/1/001  
**Customer Name:** Mr David J Askew

**Summary of representation:**

Martyrs Lane is the best option for the proposed housing plan as it will be less detrimental for the West Byfleet Pyrford Byfleet Wards.

**Officer Response:**

Support is noted.

If the representation is referring to disruption to existing communities, this is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02478/1/001  
**Customer Name:** Mrs Susan Carolin

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02498/1/001

**Customer Name:** Mr Roy Gigg

**Summary of representation:**

Support the Martyrs Lane proposal as it would produce economies of scale to enhance local infrastructure with new facilities. Developing small sites will overload the existing over capacity local infrastructure.

**Officer Response:**

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Customer Name:** Mrs Maria Rosie Tuckwell

**Summary of representation:**

The safeguarded sites in the draft site allocation DPD, specifically in Pyrford, Byfleet, and Mayford, should remain safeguarded, and therefore I am in favour of substituting the six sites, totalling 1024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Gold Course.

The Pyrford fields on Upshot Lane remain in virgin Green Belt and have been farmed continuously over the centuries and thus are essential to retaining the character of the Pyrford area.

Difficult consultation as all sites are within the Green Belt but on balance, support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made

representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mrs Elaine Tilley

**Summary of representation:**

Strongly support substituting the land to the east of Martyrs Lane for safeguarding sites identified in the draft Site Allocations DPD to meet the long term future development needs of Woking Borough between 2027 and 2040.

This is a much better site than those identified to date in Byfleet, Mayford and Pyrford.

The northern section of the site has previously been granted planning permission.

Most of this northern section is poor quality environmentally, may be contaminated with previous military and commercial use.

It is adjacent to the A320 with direct access to Woking to the south and the M25 to the north.

There are employment opportunities at McLaren nearby.

The southern section of the site is a private golf course, it is not a local resource and there is an excess of golf courses locally.

The Martyrs Lane site is too large for the number of house needed in the 2027 – 40 and it can therefore provide land for other needs i.e, employment, schools, health and community facilities or held over for future housing needs.

The site is not as isolated as can access West Byfleet railway station and shopping facilities.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to

enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Council has robust policies in place to ensure that any land contamination is fully assessed and remediation measures are undertaken prior to development taking place. The planning

process and development management process in this regard would be similar for development at any of the proposed sites.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

**Contributor Reference:** 00033/3/001  
**Customer Name:** Ms Kate Gulliver

### **Summary of representation:**

Support for the Martyrs Lane site to be developed over the 6 considered site allocations for the following reasons

The Martyrs Lane site is a previously developed site. Pyrford's fields form a key part of the escarpment and setting, have been farmed and highlighted in the Pyrford Neighbourhood Plan.

Martyrs Lane's 3 sites to the north of the golf course are almost unused, partly pre-developed and derelict. There is no landscape element, no known footpaths and the public seem not to use it.

In 2012 planning permission was granted to McLaren for a 60,000 sq. ft factory facility. Mr Freeland, a senior WBC planner, recommended that planning permission be granted as there was no concern about the development being a risk of unsightly buildings or urban sprawl which would harm the Green Belt. The application was approved by the Secretary of State. The building of houses is a viable alternative based upon many of the reasons given for approving the McLaren planning permission.

The land retains several former Army buildings, disused sports fields and general debris, including scrap cars. The SCC waste site ( to be retained ) has a derelict 7 hectares at the rear. Both of the sites have been offered up to WBC for sale and green belt release for several years now.

The 3 sites to the north of the New Zealand Golf Course should have been prioritised by WBC in its initial Regulation 18 Consultation but seem to have been overlooked. Instead the two fields in Pyrford, land in Mayford/Hook Heath and Byfleet were advanced as the recommended sites for release from Green Belt. This is unacceptable when the previous use and availability of the Martyrs Lane site is considered.

Site Capacity – 1024 Dwellings – There is confusion about how many new dwellings are required on safeguarded land in the period 2027–2040 with figures ranging from 900 to 3500. There is in fact only one figure required and that is 1024 as stated in the consultation documents.

Building on New Zealand Golf Course is not necessary to satisfy the requirement for 1024 dwellings on land safeguarded for development in the period 2027–2040.

Green Belt Constraint – The Brett Woking Green Belt report stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt. Martyrs Lane is categorised as having low suitability and should therefore be selected before the fields in Pyrford on this criteria.

The Brett report considered the Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24.

Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

Landscape character and sensitivity to change – The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. The Surrey Landscape Character Assessment says of the land encompassed by parcel 9 'the enclosed farmland, experienced from the public rights of way network, give the area a rural feel.'

Ancient tract – Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.'

Martyrs Lane no local or national land designations and has been previously developed.

#### Economic and Social Benefit

1. Economies of Scale – One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure issues like water, waste, and electricity when compared with the provision of equal services on 6 separate sites spread across the whole borough.

Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by 6 separate sites.

Affordable homes – land values of northern sites are much less than the 6 original sites suggested and this would facilitate the provision of affordable housing.

Employment – There are three large employers close by the Martyrs Lane site – McLaren, Animal & Plant Health Agency and St Peter's Hospital. The latter needs affordable housing for its employees who work shifts and bus 446 passes Martyrs Lane to the hospital.

#### Infrastructure

The selection of Martyrs Lane would allow new and efficient infrastructure providing much needed new facilities.

Also there would be less disruption to existing communities than with the original 6 sites.

Proposed developments Current intentions from Sheer House, Broadoaks and West Hall which will result in approximately 950 new homes will impact the local area and congestion.

Road Congestion – Summary information compiled from the Surrey County Council (SCC) traffic reports suggest that the average impact of 900 dwellings at Martyr's Lane based on the 10 "worst" roads or junctions will have less impact on traffic conditions than the development proposed for Mayford, or the combination of developments proposed for Byfleet and Pyrford. These traffic studies suggest Martyrs Lane would alleviate the congestion likely in West Byfleet from traffic emanating from the 6 separate sites across Woking.

Road Links – The Martyrs Lane site has the benefit of main road links – Chertsey Road to Woking and in the other direction Chertsey and the M25, also from Woodham Lane there is access to Sheerwater and West Byfleet. These are all A roads.

Currently, safeguarded sites in Pyrford & Byfleet are accessed by B or C roads. Traffic flow along the A245 through West Byfleet & over M25 bridge is at capacity.

Traffic Access – The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

Healthcare – The West Byfleet Health Centre is fully subscribed. With the potential number of new dwellings and space at Martyrs Lane, there would be an opportunity to build a new health centre and relieve current healthcare resources at West Byfleet facility.

Schooling – Pyrford C of E Primary School is already full and has taken many pupils from the Maybury area. The Martyrs Lane site would be an ideal opportunity to build a new school as part of the development plan.

Public transport – Martyr's lane already has better bus services than other sites. Currently the 446 bus runs on the Chertsey Road until 22:00 in the evening and has a Sunday Service. Buses in Pyrford stop at c18:00, Byfleet at 19:00 and Mayford at 20:00 and there are no Sunday Services. McLaren also operate an employee bus service that could contribute to Martyrs Lane connectivity services. Arranging adequate services at one site will be easier than to several dispersed sites.

#### Amenity and Heritage

Amenity value – Green Belt land in Pyrford is very accessible and actively used by walkers, runners, cyclists and others from all across the borough. By contrast Martyrs Lane is not easily accessible and in comparison rarely used by the public despite its green belt status.

Heritage – The Surrey Landscape Character Assessment describes some of the heritage features of the western section of character area SS10, which includes parcel 9, 'the historic wooded grounds of Pyrford Court are grade II listed, and a Conservation Area covers Pyrford Village. Pyrford Common is designated as a Site of Nature Conservation Interest'. To these features can be added the Aviary Road Conservation Area and the network of ancient footpaths. The two fields are integral to the heritage setting of the area.

Martyrs Lane has limited public footpaths through the area and has no known heritage value.

The entire 112 hectares provides a viable new Green Belt Boundary but there is no requirement to allocate all the land for housing and the golf course provides green space.

There is no local or national landscape designation on the Martyrs Lane site. There are no listed buildings on the 3 northern sites and there is no known heritage value to the land on Martyrs Lane to the north of the golf club.

Martyrs Lane can provide a viable direction for WBC housing expansion which will provide new homes in an area which has capacity instead of trying to further overload the areas encompassed by the 6 original sites safeguarded sites in Byfleet, Pyrford, Hook Heath and Mayford.

#### **Officer Response:**

Support for Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This site in Pyrford is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

It is accepted that the Martyrs Lane site does not contain landscape constraints such as escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable

Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it is would be wrong to assume that development at Martyrs lane would help alleviate congestion in West Byfleet than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited.

The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses therefore do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited.

As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By

this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

If the Council were to decide to safeguard this site or the other six sites, its development will take into account any development proposals in the vicinity of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02373/2/001  
**Customer Name:** Mr Christopher Stableford

**Summary of representation:**

The land to the East of Martyrs Lane is unsuitable for future development, due to the lack of road infrastructure in the area and the traffic levels are already excessively high, and the development at Fair Oaks Airport will place additional strain on these roads. The concentration of expansion in one area is too great, and therefore the existing reserved sites represent better choices.

**Officer Response:**

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a

single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

**Contributor Reference:** 02406/1/001  
**Customer Name:** Mr Trevor Cullum

**Summary of representation:**

Objects to developing on the Martyrs Lane site as it will have an adverse impact on local infrastructure, such as roads and traffic, the local environment and general quality of life in the area.

**Officer Response:**

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures. This will be the case irrespective of whether it is a single site or multiple sites.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt

boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the

Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

**Contributor Reference:** 02395/1/001  
**Customer Name:** Mrs Jennifer Warren

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

The top part of the site was recently granted planning permission for a technology centre.

The top part of the site also includes pre-developed land used as a wartime army camp, and now semi-derelict

Much of the northern side is publicly owned land, so the sale would help council tax payers.

Much of the northern site has already been used for non-agricultural purposes.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools, possibly social housing, doctor surgeries, traffic volumes, waste water, etc.

The northern part of the site is well served with public transport, unlike the other six sites.

The northern part of the site has access on to the A320 via a roundabout, with its direct links to the M25 and to Woking town centre.

The northern part of the site is close to major local employers like St Peter's Hospital, the Animal & Plant Health Agency, and McLaren's.

Fewer Woking residents would be impacted with one site on the northern part than by six individual sites.

Concerned at the Pyrford fields being developed as traffic is congested in the area. Apart from the impact on the roads, the local schools, health centre, etc. are struggling with existing numbers. That area of Pyrford is on an escarpment and is also part of a designated special conservation area.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst

this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

**Contributor Reference:** 02402/1/001

**Customer Name:** Mr Rick Wills

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

This would provide many clear economic and social benefits and economies of scale, as well as social benefits from including a suitable school, community and health services and social housing at Martyrs Lane, all of which would not be logistically suitable or would be economically comparable in Pyrford.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Summary of representation:**

Support for Martyrs Lane and opposition to development on Pyrford fields. The roads in Pyrford do not have the capacity to cope with the additional demands that such a proposed development of housing would create

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

A Martyrs Lane development would have immediate access to the A320 which appears to have capacity to handle additional traffic and gives much easier access to the M25 as well as to central Woking.

**Officer Response:**

Support for the land to the east of Martyrs Lane and opposition to development on Pyrford fields is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Customer Name:** Mr Mike Osborne

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations

DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02409/1/001  
**Customer Name:** Mr Nicholas Eliot

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey

County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. **Contributor Reference:** 02410/1/001  
**Customer Name:** Ms Hanna Wilkin

**Summary of representation:**

Objects to any development of the Pyrford fields as Pyrford fields have been farmed, contribute to the character of the area. This area also has setting around the medieval St Nicholas' Church and the grassy slopes along Warren Lane and Church Hill.

The Pyrford Green belt has several conservation areas which together with other projects such as historic house restoration.

Green Belt land in Pyrford is very accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

Proposed development from Sheer House, Broadoaks and West Hall will result in approximately 950 new homes. This is more than the infrastructure for the Pyrford/ West Byfleet area can cope with.

Martyrs Lane will have the least impact on Woking overall as a single site, sites to the north of the golf course are almost unused. There is no landscape element, no known footpaths and not utilised by the public.

As there was planning permission granted to McLarens in 2012 and therefore suitable for development

**Officer Response:**

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

If the Council were to decide to safeguard this site or any of the other sites, its development will take into account any development proposals in the vicinity of the site.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

**Customer Name:** Mr Robert Manning

**Summary of representation:**

Supports Martyrs lane site to substitute several smaller sites with a single development that can support the necessary ancillary infrastructure.

The Martyr's Lane site appears to be well sited for access to Woking and arterial roads, including the M25.

Investment in quality park spaces for children, additional investment in the nearest school/healthcare, additional bus/cycling access.

The other six sites cannot deal with the road congestion.

Economies of scale to concentrate the development in one place and gain the best return.

The site appears larger and have new community amenities.

Most of the land at Martyr's Lane appears to include more derelict 'green belt' land than several of the alternatives that have amenity value to the local population.

Some land in the multiple parcels are agricultural, which should be protected.

In summary, support the use of the land east of Martyr's Lane due primarily to the economies of scale that should maximise the new infrastructure to support the enlarged local community and to integrate with the transport network.

If the Golf Course land is used to provide enhanced public amenities and green space then that is desirable and supportable.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration.

The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst it is correct that the Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed

safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

**Customer Name:** Mr Graham Pereira

**Summary of representation:**

Opposed to building on Pyrford's Green Belt. Increase in traffic and the number of vehicles going through Bolton's Lane as a short cut to West Byfleet, A3 and Old Woking Area.

The Green Belt at the top of Upshot Lane has been farm land and used for walking.

Stop building offices on our green belt in Old Woking.

Building on Pyrford's village will reduce property prices.

Woking and Surrey Council need to ensure what they promise is delivered.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council is not aware of any proposed office developments within the Green Belt within Old Woking. As set out in the Core Strategy and Development Management Policies DPD, the Council will protect Green Belt from harmful development and strict control will be applied over in appropriate development.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process,

the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

A reduction in property value is not a material planning consideration, however, the Council is satisfied that robust policies are in place in the Development Plan for Woking to prevent adverse impacts on the social, environmental and economic character of any area in which development takes place.

**Contributor Reference:** 02416/1/001  
**Customer Name:** Ms Barbara Boyse

**Summary of representation:**

Support the Martyrs Lane proposal

The Martyrs Lane site is certainly big enough to accommodate any future housing needs and any necessary infrastructure such as shops, health centre etc. There would also be land available as open green space for residences recreation and wildlife.

The A320 to the north of Woking has easy access to the M25 and Woking Town Centre with its main railway station. South of Woking the A320 is already heavily congested and will only get worse once the hoe Valley School on Egley Road opens.

Provision for a 24 pitch Gypsy/Travellers site

The site also has no National or local landscape designation unlike those here at Mayford i.e, escarpment and rising ground landscape importance issues.

McLaren had previously been given Planning Permission on the proposed site so assume that this land is certainly suitable for development.

Major employers are (St Peter's Hospital, the Animal and Plant Health Agency, McLaren and also the nearby Brooklands Retail Park. )

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through

careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02417/1/001  
**Customer Name:** Mr Harry Stollard

**Summary of representation:**

Martyrs Lane will have the least impact on Woking overall because the land is a single site, has been previously developed, is partially derelict and less than half is necessary to meet Borough requirements.

In contrast the fields on Upshot Lane are in virgin Green Belt, have been productively farmed, are used for amenity and are fundamental to the semi-rural character of both the local Pyrford Escarpment and the Village of Pyrford.

Any building of homes on the proposed scale will impact on all local communities quality of life because of the increased pressure on the infrastructure. Our roads and schools are already overcrowded and inadequate. However, Martyrs lane would be less damaging.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that less than half is needed, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all

other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02460/1/001  
**Customer Name:** Mr Roger Allen

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

The Martyr's Lane site, excluding the new Zealand Golf Course, can accommodate at least as many dwellings as the six alternative sites, and would offer advantages in terms of economies of scale for infrastructure services, proximity to major employers such as McLaren and St Peter's Hospital, and better access to public transport and main road links.

A single site also offers the best prospect for including much needed services such as a school and a medical centre, which will be needed to accommodate the extra population, wherever the new homes are situated.

The Martyr's Lane site includes land which was recently given planning permission for building, some pre-developed land used as a wartime army camp and now semi-derelict; and some which has already been used for non-agricultural purposes.

In the case of the two Pyrford sites, there are strong arguments based on the unique rural environment of those sites, which the Brett Report on Woking Green Belt described as fundamental to the green belt.

This site will minimise disruption to both the environment and the local community.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information,

the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02455/1/001  
**Customer Name:** Mr John Carolin

### **Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

This consultation process is misleading as it gives the impression that the two options are mutually exclusive and that at least one of them is a valid proposal, all the options are possible.

The Pyrford fields (GB12 and GB13) should not be taken out of Green Belt. WBC's evidence base shows that they should not be removed.

The Pyrford fields have a critical and continuing role in fulfilling important purposes of the Green Belt, namely restricting sprawl and safeguarding the countryside from encroachment.

Any development of the Pyrford fields is negative in terms of sustainability versus other available options. The fields are distant from any town centre, secondary school, and GP facilities.

Public transport is very limited and they are distant from any railway station.

Local roads could not support such development alongside other proposed developments in the vicinity.

Development of the Pyrford fields would have a negative impact on important natural, historic and cultural assets and on landscape.

The Pyrford fields are agricultural land.

The reason for selecting the Pyrford field GB13 parcel was entirely without transparency or any rationale.

Runneymede Borough Council commented on GB12 and GB13 "It is unclear from the published material why these parcels were considered to be appropriate for future development."

There are large areas of land in Woking not in the Green Belt that are yet to be properly considered for housing development.

Some areas of land in Woking's Green Belt were not properly considered in the PBA report

Reasons why neither option is valid

The Green Belt boundary around Woking should not be changed in order to release land to developers for new housing because the fundamental purposes of Green Belt remain sound and wholly applicable

The demographic assumptions underlying WBC's proposals to change the Green Belt are deeply flawed and should be deferred

There is no overall shortage of housing in Woking that cannot be addressed without changing the Green Belt.

WBC should increase its intervention in the social rental market and support other national and local fiscal actions that help people afford a home. Building new dwellings the Green Belt is not a practical solution to this particular problem.

Central government is not instructing local authorities to build new housing in areas of the Green Belt that have not been previously developed, as reiterated in the recent housing white paper. Pyrford's fields are indeed those 'green fields' that need to be kept permanently open.

The decline in participation in golf in the UK and over-supply of golf courses. Both land within the Green Belt and not in the Green Belt are devoted to golf. Rationalisation of this major land-use is required.

#### **Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper. The representation regarding infrastructure, the evidence used to inform the Site Allocations DPD, site assessments and alternative sites, have also been addressed in the Regulation 18 consultations Issues and Matters Topic Paper.

The representation is correct that the options are not mutually exclusive. The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed. The conditions attached to the latest planning approval at the McLaren site west of the A320 (PLAN/2014/1297) presented a change in circumstance to justify the Martyrs Lane consultation. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives. The merits of the original six sites have already been given in the Officer's

response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593

operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to

protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Customer Name:** Ms Catherine Reeve

**Summary of representation:**

It will impact heavily on the local infrastructure and facilities. Any development in excess of 1200 homes in this area would create further stress on the local provision of medical and social services, schools, rail stations, car-parking and shopping areas. All such facilities are already extremely crowded. It would be better, to spread future developments into smaller parcels across several areas of the borough.

As part of the Green Belt the site is critical in checking urban sprawl and in providing a refuge for wildlife, some of which could be protected species or of international conservation importance.

The Sheerwater development, West Byfleet development and Fair Oaks Garden Village development will create additional stresses on the area

Exacerbation of traffic congestion. The proposed development would add additional pressure on the road network initially from construction traffic, from the addition of new junctions to existing roads, and subsequently from the traffic generated by the new residents of the area and the services they require.

Poor public transport provision in the area.

Ecological impacts on the proposed site. The diversity of habitats on a site of this size, and its proximity to at least three sites of nature conservation importance means that it is very likely to be a significant site for biodiversity. Impact on wildlife from development and residents with pets. The proposal to consider this Green Belt area for future development seems to have been made without any detailed ecological evaluation of the site.

At least three ecologically important sites are adjacent or very close to the proposed development area on the land east of Martyrs Lane: the New Zealand Golf Course Site of Nature Conservation Importance (SNCI), the Birch Wood and Hoyt Wood SNCI and Horsell Common Site of Special Scientific Interest (SSSI) which is part of the Thames Basin Heaths Special Protection Area (TBH SPA).

The creation of a SANG as part of a development of the size proposed will be an inadequate response to these problems as it is most unlikely to meet demand, especially with the combined impact of nearby developments will be detrimental to biodiversity and the integrity of the TBH SPA. Woking Borough Council should prioritise the protection of the SPA.

**Officer Response:**

Opposition to the Martyrs Lane site noted.

The matters of urban sprawl, wildlife, traffic congestion and public transport are already addressed the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater and West Byfleet.

The Council is aware that some of the infrastructure implications for developing the site at Martyrs Lane could have cross boundary significance. This would also be the case with development impacts resulting from within the adjoining authorities that could have impacts in Woking. An example is the traffic implications for developing the Martyrs Lane site and the potential developments at Fair Oaks in Surrey Heath and Longcross in Runnymede.

Under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

It is acknowledged that the Martyrs Lane site is in close proximity to ecological sites such as Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse

impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

Policy CS8: Thames Basin Heaths Special Protection Areas (SPA) of the Core Strategy accords priority to the protection of the Thames Basin Heaths SPA. The Council has identified sufficient SANG capacity through existing SANG sites and proposed allocations in the Draft Site Allocations DPD to enable the delivery of the Core Strategy and beyond. The Council will engage with Natural England to agree the nature and size of the SANG that will be needed to serve this development if it is allocated. The Council will initiate the discussion at the appropriate time.

**Contributor Reference:** 02422/1/001  
**Customer Name:** Mr and Mrs G and P Ankers

**Summary of representation:**

Supports for the Martyrs Lane site to be substituted for the other sites.

Not all Green Belt land is equally worthy of preservation and, accepting that some must be released for house building, it makes sense to retain the more useful and attractive pieces of land. The fields in Pyrford are productive agricultural land and provide picturesque views across the escarpment to the hills beyond.

By contrast, the Martyrs Lane site has little visual appeal and, apparently, no agricultural value. Furthermore, part of it has already been built on and is derelict and unsightly.

It has planning permission for a factory on part of the land.

However, as this piece of land, excluding the New Zealand Golf Club, would seem large enough to build the 1024 dwellings planned for the original 6 sites, there is no need to build on the Golf Club land or to remove it from Green Belt at all.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Customer Name:** Mr Ian Mills

**Summary of representation:**

Strongly support the substitution of land to the east of Martyrs Lane for the 6 sites allocated for safeguarding for development post 2027 in the Regulation 18 Consultation of June 2015 for the following reasons:

There are major concerns in Pyrford regarding infrastructure and services for example, the local primary school is at capacity, the West Byfleet health centre is fully subscribed and Water supply and sewage disposal.

There are also major concerns relating to traffic congestion in Pyrford and West Byfleet.

Officer responses to regulation 18 submissions have made reference to the Surrey County Council transport studies. No study appears to have been done that includes the proposed development in West Byfleet (West Hall), the Pyrford fields, Sheer House, Broadoaks, the expansion of the International School on Old Woking Road, and the developments on the A3 near Ripley including Wisley airfield.

As far as the Surrey County Council studies themselves are concerned the January 2015 study shows, for the 10 roads with the highest increase in traffic flow, increased flows for the Mayford, Byfleet + Pyrford, and West Byfleet developments.

The comparable figures from the September 2016 study for 900 dwellings East of Martyrs Lane are lower than the above sites (individually not collectively). This is a clear indication that the 900 dwellings development at Martyrs Lane has a lower impact across the Borough than the sites it is replacing.

It should be noted that the 2016 study for Martyrs Lane includes an extra 500 dwellings at Mayford and 592 at West Byfleet.

In addition Martyrs Lane seems to offer easier mitigation of any traffic problems than is the case for West Byfleet/Pyrford area of concern.

It should be recognised that the Martyrs Lane site has previously been built on, still retains some old army buildings, and had planning permission granted for a McLaren factory on the site. By comparison the Pyrford fields have been in agricultural use for centuries and contribute to the urban landscape.

The Brett report commissioned by the Council shows the Pyrford fields as having very low suitability for removal from the green belt whereas the portion of the Martyrs Lane site, excluding the golf course, has only low suitability for removal from the green belt. The Brett report did not even recommend that parcel GB13 of the Pyrford fields should be considered for

removal, and suggests that only part of GB12 could be suitable. It is difficult to understand why these sites remained under consideration.

It appears that the value of land to the east of Martyrs Lane is likely to be significantly lower than in the 6 sites originally designated. This would provide more opportunity to provide affordable housing and meet the Borough's objectives in this regard.

A single site also offers more opportunity to improve provision of services than 6 widespread smaller developments. It also will minimise the disruption in the already heavily developed localities of the original 6 sites.

The possibility of a major development of around 3,000 dwellings east of Martyrs Lane including the golf course. However the consultation asks about an alternative site to replace the 6 originally designated sites with a combined allotment of 1024 dwellings. This should be achievable on the Martyrs Lane site excluding the golf course.

It should not be overlooked that West Byfleet + Pyrford in a very tight area are already earmarked for over 1,000 dwellings between Sheer House, Broadoaks, and West Hall pre 2027.

#### **Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The proposed allocated sites of West Hall, Pyrford Fields, Sheer House and Broadoaks were taken into account in the above Green Belt Boundary review assessment. The expansion of the international school on Old Woking would have been assessed at the Development management stage. In terms of the development at Wisley airfield, under the Duty to Cooperate the Council has informally and formally consulted all the neighbouring authorities about the Martyrs Lane proposal. This includes Runnymede, Surrey Heath, Waverley, Guildford and Elmbridge Borough Councils. In particular, the Council has been in discussions with them about how best to quantify and address the cumulative implications of proposals within the respective boroughs that could have cross boundary significance. The neighbouring authorities have made their respective representations as part of this consultation, which the Council will take into account.

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Martyrs Lane is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the

Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

If the Council were to decide to safeguard this site or any of the other 6 sites, its development will take into account any development proposals in the vicinity of the site.

**Customer Name:** Mr Gavin Smith

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but on balance support the Martyrs Lane proposal.

Planning permission was recently granted for the top part of the site.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst

this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02436/1/001  
**Customer Name:** Mr Peter Anthony Bellion

**Summary of representation:**

Does not agree to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD. The land to the east of Martyrs Lane, the recycle waste centre and New Zealand GC are both in the Greenbelt and very close to protected heathland in relation to the protected ground nesting Dartford Warbler.

The Woodham Lane provides a natural and effective boundary between the Green Belt and the Urban boundary of Woking BC. This is acknowledged in the council's SHLLAA and the employment Land Review that confirm that Woking BC are ahead of its target to provide a 5 year supply of housing as required by the NPPF.

In fact the current statistics, provided by WBC, confirm that in the identification of other sites within the urban boundary there are sufficient sites to enable future Housing supply to be satisfied in the period of the new local plan to 2040 without development in the Green Belt.

The traffic chaos that a new village would create has not been properly considered by Woking councillors. Without proper coordination with Surrey Heath and Runnymede the adjoining boroughs the A320 to the M25 will be horrendous. The proposed development at Fair Oaks will further intensify the roads let alone the infrastructure requirements. As a simple example closure of one side of the A320 recently for mains drainage repair/renewal created traffic jams all around Woking, Chertsey, Knaphill, Addlestone and beyond for months. The councillors cannot possibly ignore all the professional advice on traffic generation.

Allowing new housing sites to be created within Byfleet, Pyrford as infill developments is far more productive without upsetting the existing local infrastructure network. Further identified sites to the south of Woking, Maybury etc where a new school is being built are more productive and causes less disruption.

Objects to the proposed consultation, not only for the reasons above and by other local residents but also because the proposed single site strategy would clearly not meet the legal tests of soundness. As such it would be a pointless and wasteful approach by the Council to push on with this proposal.

**Officer Response:**

Opposition for safeguarding the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs and the numbers required has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The site would have been designated as SPA by Natural England if any presence of Dartford Warbler and Nightjar were significant enough to justify designation.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It was appropriate and proper for the Council to carry out the consultation exercise. National planning policy requires an assessment of all reasonable alternatives before preferred options are identified. The changing circumstances regarding the planning status of the McLaren site post dates the Regulation 18 consultation of the draft Site Allocations DPD and justifies the consultation to enable that option to be tested. The overriding consideration in this regard is to identify the most sustainable land when compared against all other reasonable alternatives. The information that is gathered from the representations is useful evidence to inform the Council's decision on the matter. The consultation exercise is therefore not a waste of time, effort or public money.

Paragraph 182 of the NPPF deals with examination of local plans. It requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- Should be deliverable over its period;

- Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of the land.

The New Zealand Golf Course has written to the Council and has made formal representation as part of the consultation to confirm that the part of the land that is in its ownership will not be made available now, in the future and never to meet future development needs. In this regard, there is no expectation for a change in their position within and beyond five years. The representations from the New Zealand Golf Course are addressed in full separately.

McLaren Technologies Group Limited has also made representations. Whilst it would generally support in principle the release of the land from the Green Belt, it would only allow its land holding to be used as a strategic employment site to support its own future expansion programme. McLaren will not allow its land to be used as envisaged in the consultation. If the Council were to decide not to release the land east of Martyrs Lane from the Green Belt, McLaren have provided reasons why its land should be designated as a Major Developed Site in the Green Belt. The representations from McLaren has been addressed in full separately.

The lack of availability of the above sites could cast doubt on the deliverability of the land if it is safeguarded. To put it into context, assuming the two sites will not be available to meet future development needs and the Surrey County Council's Waste Safeguarded Site is also not available, the residual land will only deliver about 300 dwellings (at 30 dph) as against the 1,200 dwellings that the Council wish to safeguard land. If the Waste Safeguarded Site is made available, there will be sufficient land to enable the delivery of about 600 dwellings at the same density. This is still significantly short of what is needed. Importantly, the Council has to make sure that any land that it safeguards would not lead to an isolated development within the Green Belt.

It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

Regarding the 5 year housing land supply, the Council is currently able to demonstrate it has 5 year of deliverable housing sites to meet its housing needs. Nevertheless, the Site Allocations DPD identifies sites that will facilitate the comprehensive delivery of the Core Strategy as well as safeguard land for future development needs post 2027. The Council considers this to be in line with National Planning Policy.

As set out within the Regulation 18 Consultation Issues and Matters Topic Paper, the Council was able to demonstrate at the examination of the Core Strategy that the Green Belt would be a future direction of growth from 2022. This is based on a comprehensive assessment of brownfield sites in the urban area, in particular the SHLAA. Further information can be found in the topic paper.

**Contributor Reference:** 02446/2/001  
**Customer Name:** Mr Philip Tudhope

**Summary of representation:**

Does not agree with using the land to the East of Martyrs Lane for development. Particularly for residential housing or business development.

The lack of capacity in the roads around this area to take additional traffic and the use of green belt land for urban development.

The road network in this local area is already over-congested and would become overwhelmed if the proposed huge housing development goes ahead.

Protect woodland and green belt areas

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02450/1/001  
**Customer Name:** Mr Lionel Barnes

**Summary of representation:**

Supports the proposed substitution.

Unlike Pyrford, it is an area of no landscape or amenity value and has had developments on it previously.

Would avoid an increase of traffic on the already very busy roads between Pyrford and Woking and between Pyrford and St Peters and the M25. objections to the Martyrs Lane site on the grounds of increased traffic on the A320 northbound are not valid since traffic from any new developments in Pyrford and Mayford would also be using it. Furthermore, having the thousand or so houses on the one site would no doubt justify the road improvements to the A320 which are in fact needed now.

Having all the new build in one place would perhaps justify the inclusion of new facilities, such as a new health centre, to relieve pressure.

Finally, there will be no need to use the golf course for the number of houses that are needed.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of

infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Contributor Reference:** 02382/1/001  
**Customer Name:** Mr Stewart Hodges

**Summary of representation:**

Sensitive and difficult decision, however when reviewing the evidence and facts, Martyrs lane development would have the least impact on the area as a whole. Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

The required infrastructure to support this course of action would be far less.

The top part of the site has already been granted planning permission

This land has no current use and there is no public access to the land

A single site would provide some economies of scale to sort out the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc.

The northern part of the site is already well served with public transport unlike any of the other six sites

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without

the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing

structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02426/1/001  
**Customer Name:** Mr Steve Thwaites

**Summary of representation:**

Supports the proposal.

Provides the background to the consultation exercise, noting that parts of the site had previously been discounted on highway, landscape and Green Belt grounds. Sets out the reasons given by the LDF Working Group for assessing the Martyrs Lane site.

Sets out the tests of soundness in the NPPF against which the Local Plan is assessed (paragraph 182), i.e. whether it has been positively prepared, it is justified, it is effective and is consistent with national policy. Uses this framework, with Planning Advisory Service guidance, to assess whether using a single allocation strategy at Martyrs Lane would meet national policy tests.

**Positively prepared:**

Questionable and the Council has to demonstrate Duty to Cooperate – not clear that Runnymede Council was approached previously regarding impacts on neighbouring borough. It is understood that Runnymede Council will object to the proposal.

**Justified:**

Questionable whether the reasons given by the LDF Working Group provide anything more than matters of opinion, rather than credible evidence justifying the choice of a single site strategy.

- acceptability for housing development given planning history: proposal was for a different use, which would have different requirements and impacts. There were special circumstances why this was considered acceptable by the Council. Different context to a housing allocation, with different impacts e.g. easier to mitigate and manage traffic impacts for this commercial scheme than a large housing scheme, and would not require same infrastructure (schools, health facilities etc);
- the area has defensible boundaries: fact;
- no local or national landscape designations on the site: true in one respect, but proximity to Horsell Common SPA is significant consideration. It is impractical to provide sufficient SANG, leading to demonstrable harm to SPA.
- transport impacts would not be as severe as forecast, and can be mitigated with cycle and bus routes: the LDF Working Group has misinterpreted the highway authority evidence. Should also be considered with cumulative impacts of other nearby proposals.
- proximity to major employers to reduce commuting: this statement has no credibility as there is no evidence that employees at these organisations will be given priority housing in the new development; or that future residents will be prioritised for employment.
- greater certainty for future urban growth: as much of the land is unavailable the Council can't be confident of implementation or delivery, thus providing lower certainty for urban growth.

Based on robust and credible evidence?

The evidence collected by Officers argues against allocation of this site.

Most appropriate strategy?

Audit train of Council documents indicates that this strategy is not the most appropriate. It goes against professional and technical opinion.

Effectiveness:

The Martyrs Lane strategy does not meet the requirements as it is not based on evidence of sound infrastructure delivery planning, does not have delivery partners who have signed up to it, and is not coherent with strategies of neighbouring boroughs. Existing infrastructure is too distant. Pressures on expenditure and budgets make it unlikely the scheme can be supported self-supporting with its own schools, shops and services. Any new site allocation will need to rely to a large extent on existing infrastructure, which are too far away to serve the development properly.

It is not deliverable.

The dispersed strategy is also more flexible: unexpected obstacles to delivery could stop the single site strategy in its tracks, leading to no delivery of development. A dispersed strategy is more flexible to deliver some development.

Both options are capable of being monitored.

The single site strategy therefore fails on many of the tests of soundness. If pursued, the Council would render itself susceptible to legal challenge. Additionally, objects to the proposal based on all of the practical reasons set out by the Woodham and Horsell Neighbourhood Forum and local residents.

Comments on the Sustainability Appraisal assessment:

SA Objective 1: provision of housing unlikely given the hostility to the allocation by landowners. A more accurate score would therefore be negative in medium term and neutral in longer term.

SA Objective 2: agrees with short-term assessment but score should be negative in both medium and long term as mitigating/optimising measures are impractical and unlikely to be delivered.

SA Objective 4: negative score is more appropriate as the optimising/mitigating measures are over-optimistic.

SA Objective 5: should be a double negative score. Sceptical that on-site infrastructure will be provided, an accessibility to services and facilities will remain limited.

SA Objective 6: should be a negative score. The assessment overestimates the amount of PDL on the site.

SA Objective 7: should be a negative score into longer term as car journeys will dominate.

SA Objective 9: underestimates impact on SPA and inability to provide SANG between the housing allocation and the SPA. Scoring should be double-negative.

SA Objective 11: substantial off-site movement would undermine the positive impact of the new energy efficiency of buildings.

SA Objective 15: the need to travel to services and facilities should lead to a double negative score.

SA Objective 16: should be neutral at best – no evidence to justify a positive score in the longer term.

SA Objective 17: should be negative unless the Council will positively promote economic development on the site.

### **Officer Response:**

Objections to the proposal are noted.

Officers are aware of the tests of soundness and criteria for Plan-making as set out in the NPPF. It is important to note that criteria in paragraph 182 of the NPPF apply to the plan as a whole, rather than to individual site allocation options within it. The draft Site Allocations DPD specifies that the safeguarded sites will be allocated or released for development through a review of the Site Allocations DPD and/or the Core Strategy. The Council appreciates that if the Martyrs Lane site is to be safeguarded there will continue to be further detailed investigation of development impacts before the land is allocated and/or developed. The allocation of the land for development will set out the specific key requirements to make sure that detailed assessments (such as Transport Assessments) are carried out to fully assess the various impacts of development and identify appropriate measures of mitigation that will be put in place to address any adverse impacts. It is anticipated that more work will need to be done with partners such as the Surrey County Council as part of the review of the Core Strategy and/or Site Allocations DPD.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policy is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the

sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed. In preparing this report, Officers will be mindful that the Site Allocations DPD as a whole will need to meet the tests of soundness, and make recommendations accordingly.

The issues raised in the representation, including the merits of the 'dispersed site strategy', are noted and will weigh in the balance of considerations by Members. In response to specific points raised:

The Regulation 18 consultation Issues and Matters Topic Paper sets out in detail in Section 1 and 8 the evidence used to support the preparation of the Site Allocations DPD. This evidence includes an up-to-date Strategic Housing Market Assessment (SHMA) (2015). The Council can confirm that neighbouring authorities were consulted prior to the consultation (in October 2016). This matter is addressed in detail in Section 6 of the Duty to Cooperate Bodies Topic Paper.

Although the Officers dismissed parts of the site in earlier stages of plan preparation, the changing circumstances regarding the planning status of the McLaren sites post dates the Regulation 18 version of the DPD, and justifies the reconsideration of land to the east of Martyrs Lane as a reasonable alternative to be tested.

Officers would agree that although planning history of the site is a material consideration that needs to be taken into account, it was approved in an entirely different context, and for different uses, and there is therefore no presumption based on this planning history that housing at this location would be suitable.

The Council recognises that the site is in close proximity to the Horsell Common SPA. Section 16 of the Duty to Cooperate Bodies Topic Paper addresses this issue in detail. Natural England submitted a representation in response to the consultation. It does not have any objection in principle to the safeguarding of the site. It notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. This provision does not have to be in between the site and the SPA, as suggested in the representation. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed.

The Council's Community Strategy seeks to improve access to quality and affordable housing for local people and key workers. It is not unreasonable to assume that key workers at nearby major employers would benefit from local affordable housing at the Martyrs Lane site; nor is it unreasonable to assume that prospective employees would find a new community here attractive for the purposes of reducing their commute to work.

In terms of delivery and implementation: it is agreed that availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. The land east of Martyrs Lane is in multiple ownership, and the New Zealand Golf Course and McLaren collectively owns a significant proportion of the land.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of the land.

The New Zealand Golf Course has written to the Council and has made formal representation as part of the consultation to confirm that the part of the land that is in its ownership will not be made available now, in the future and never to meet future development needs. In this regard, there is no expectation for a change in their position within and beyond five years. The representations from the New Zealand Golf Course are addressed in full separately.

McLaren Technologies Group Limited has also made representations. Whilst it would generally support in principle the release of the land from the Green Belt, it would only allow its land holding to be used as a strategic employment site to support its own future expansion programme. McLaren will not allow its land to be used as envisaged in the consultation. If the Council were to decide not to release the land east of Martyrs Lane from the Green Belt, McLaren have provided reasons why its land should be designated as a Major Developed Site in the Green Belt. The representations from McLaren has been addressed in full separately.

The lack of availability of the above sites could cast doubt on the deliverability of the land if it is safeguarded. To put it into context, assuming the two sites will not be available to meet future development needs and the Surrey County Council's Waste Safeguarded Site is also not available, the residual land will only deliver about 300 dwellings (at 30 dph) as against the 1,200 dwellings that the Council wish to safeguard land. If the Waste Safeguarded Site is made available, there will be sufficient land to enable the delivery of about 600 dwellings at the same density. This is still significantly short of what is needed. Importantly, the Council has to make sure that any land that it safeguards would not lead to an isolated development within the Green Belt.

It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the land is the most sustainable when compared with the original six safeguarded sites.

With regards to the list of objections put forward in the representation at Appendix 1, the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses each of these issues in detail. This includes the issue of infrastructure delivery.

The Council will work constructively with infrastructure providers and authorities, such as Surrey County Council, to identify the necessary infrastructure to support the development of the Martyrs Lane site if it is allocated and/or developed. The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council also continues to work with neighbouring boroughs such as Runnymede and Surrey Heath to discuss and assess cross-boundary infrastructure requirements. The Councils are in the process of drafting a Statement of Common Ground about how to work together in the future to address cross-boundary strategic matters.

To conclude: as an advisory group, the LDF Working Group appropriately carried its duties by making recommendations to Council. The Group gave clear and specific reasons for its recommendation, and took into account all evidence collected in the preparation of the draft Site Allocations DPD up to that point. The Council took the Working Group recommendations into account before coming to its decision to consult on the land east of Martyrs Lane. All Members of the Council will once again have the opportunity to consider the representations to this consultation and decide which overall strategy they wish to publish for Regulation 19 consultation and submit to the Secretary of State for examination. Paragraph 182 of the NPPF requires the Council to submit a Site Allocations DPD for Examination that it considers is sound. That is exactly what the Council will do and this will minimise any risk of the DPD being found unsound. In particular, the Council would only safeguard land that it considers are the most sustainable based on proportionate evidence when compared against other reasonable alternatives.

The separate references to the Sustainability Appraisal scoring are noted and taken into account. As described in detail in the draft SA Report, an SA Framework was developed to provide a consistent basis for describing, analysing and comparing the sustainability effects of the options and various proposals of the Site Allocations DPD. Section 11 of the report describes in detail the SA methodology, including how the scoring works. The Council is confident that this methodology has been effectively applied and therefore no modifications are proposed, as follows:

SA Objective 1: opinion noted. The lack of availability of land does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. The scoring assumes that housing will be delivered as proposed.

SA Objective 2: opinion noted. The appraisal took all of the decision-taking criteria into account, and in the whole believes that development of the site presents an opportunity to improve health and wellbeing through improved accessibility to open space. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the development of the site; as well as public sector contributions. The Council is satisfied that if the site were to be safeguarded, it can be sustainably developed with the necessary infrastructure delivered to support it without undermining development viability.

SA Objective 4: opinion noted. See comment above regarding social infrastructure. Implementation of design policies in the Development Plan will also ensure development is designed to reduce fear of crime.

SA Objective 5: opinion noted. See comment above regarding infrastructure provision.

SA Objective 6: opinion noted. Focusing only on the decision-making criteria, the potential loss of greenfield land versus the potential to support the use of and remediation of previously developed land led to a neutral score. The potential to remediate contaminated land – in particular the safeguarded waste site, and potential to support a mix of uses – was also taken into consideration.

SA Objective 7: opinion noted. However, the Council is satisfied that the necessary infrastructure to support the development can be achieved – see comment above.

SA Objective 9: opinion noted. Development Plan policies (CS7 and CS8) are specifically crafted to avoid harm to the SPA as a result of development. Development will only be permitted where the Council is satisfied that this will not give rise to a significant adverse effect upon the integrity of the SPA. Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy (which does not require SANG to be located between development and the SPA). Officers are confident that the requirements of planning policy and the SPA Avoidance Strategy will be met if the Council decides to safeguard the land for future development. In this regard, the scoring will not change.

SA Objective 11: see comment above on the provision of infrastructure.

SA Objective 15: opinion noted. See comment above on the provision of infrastructure.

SA Objective 16: opinion noted. The Council are confident that the development of the site would be supported by necessary social, physical and green infrastructure. Surrey County Council, for example, have indicated the requirement for an on-site primary school, thus improving access to and participation in education, contributing towards a positive score in the longer term. All of the decision-making criteria need to be considered.

**Contributor Reference:** 02376/1/001

**Customer Name:** Mr And Mrs Gerard And Margaret Mandeville

**Summary of representation:**

Supports substituting the six sites in the draft site allocation with land east of Martyrs Lane DPD but excluding building on New Zealand Golf Course.

A single site would provide some alleviation towards all infrastructure issues like affordable housing: schools: Doctor Surgeries: waste water and traffic problems etc.

It would be better served with public transport unlike the other sites. It would also have access to the main road via the nearby roundabout.

As part of the site is publicly owned it would help local tax payers.

It would have less impact on the residents and looks so much more feasible than the other six sites identified.

**Officer Response:**

Support noted.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste

safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from

various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day.

The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 01526/2/001  
**Customer Name:** Mr Mark Stevens

**Summary of representation:**

Woking Chamber's members were asked to provide responses to WBC's consultation on the site bounded by Martyrs Lane, in particular to reflect the impact on business if the proposal were accepted.

The majority of responses were concerned about the commercial impact on the town arising from the expected additional congestion on the A320. This might discourage businesses relocating to Woking and therefore be a disadvantage to local small businesses.

Impact of online shopping and whether there would be any local benefit of the development.

However, another respondent was in support of the Martyrs Lane site as the land area had previously received Planning Permission for a Technology Centre, and thus decision to remove from the Green Belt had already been taken.

The site is well served by the existing road network.

Whilst there are locally Listed properties in the vicinity, the land does not surround a Grade 2 Listed property as at Saunders Lane.

**Officer Response:**

In terms of the objection raised to the site due to the impact on the A320, the Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The consultation concerns the approach the Council should take with regards to safeguarded sites to meet future development needs between 2027 and 2040. Safeguarding of land is a means of ensuring that land that has been identified for longer term development needs beyond the Core Strategy period is protected from conflicting development. In this regard, the safeguarded land is not allocated for development at the present time. Its release for development will only be considered as part of a future review of the Core Strategy and/or the Site Allocations DPD. The overriding objective of this particular exercise and at this particular

stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

In terms of support for Martyrs Lane site.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

There are a number of locally listed buildings within the vicinity of the site, the closest is Blandings, Woodhambury and Woodbarrow, located adjacent to the southern boundary along Woodham Lane. However, neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

**Contributor Reference:** 02418/1/001  
**Customer Name:** Ms Charlotta Snelgrove

**Summary of representation:**

Supports the proposal, however disagrees on building on Green Belt land as it will cause further problems in the future. The Council should choose Martyrs Lane as it will have the least impact on nature and residents.

Certain Members of the Council have bowed to the pressure of Burhill Estates who have been trying to sell the fields in Pyrford for decades, and pushed the fields to the top of the list for removal from the Green Belt. This is despite an independent report declaring these fields are the least suitable in the area to be built on. Decisions are financially motivated. The files for Martyrs Lane were hidden and should have been considered initially.

Green Belt land in Pyrford is actively used by walkers, runners, cyclists etc and has beautiful views over the Surrey Hills. This is not the case at the Martyrs Lane site.

Significant new development proposals in the Pyrford and West Byfleet areas will put a strain on existing infrastructure, without a further population increase.

Parts of the Martyrs Lane site are previously developed.

One site will allow economies of scale with infrastructure provision (roads, schools, doctor surgeries etc).

The New Zealand Golf Course does not need to be built on.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The decision to safeguard particular sites in the draft Site Allocations DPD is well evidenced. Section 10 of the Regulation 18 Consultation Issues and Matters Topic Paper provides a detailed account of the Green Belt boundary review procedure, and how the Members of the Local Development Framework Working Group were satisfied it had been prepared in accordance with the brief, and that it provides useful evidence to inform the DPD.

The Peter Brett report did actually recommend that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open

exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Officers did in fact consider parts of the Martyrs Lane site in the early stages of DPD preparation. Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. As noted above, the Green Belt boundary review, as well as the landscape assessment conducted by Hankinson Duckett, concluded that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

In 2016, a change in circumstances relating to planning approval at the McLaren site west of the A320 prompted Members to reconsider land to the east of Martyrs Lane as an alternative site for future development. The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. Detailed

reasons were put forward by Members of the LDF Working Group, and are available on the Council's website. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed. The conditions attached to the latest planning approval at the McLaren site west of the A320 (PLAN/2014/1297) presented a change in circumstance to justify the Martyrs Lane consultation. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council recognises that there may be economies of scale in providing certain infrastructure. However, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material

considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect locally valued landscape features such as footpaths within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the landscape assets of the area. These policies also require new development to respect and make a positive contribution to the character of the area in which they are situated.

Regarding the New Zealand Golf Course in the proposal: as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. New Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Contributor Reference:** 01177/2/001  
**Customer Name:** Mr John Woolgar

**Summary of representation:**

The pending redevelopment of the Town centre and Broadoaks in West Byfleet, The A320 and Woodham Lane cannot cope with the amount of traffic and also the lost wildlife in the area.

**Officer Response:**

If the Council were to decide to safeguard this site or the other six sites, its development will take into account any development proposals in the vicinity of the site.

The matters of Wildlife and traffic have been addressed in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

### **Summary of representation:**

Support the Martyrs Lane site.

Misinformation has been circulated about the Martyrs Lane (ML) site as to the number of dwellings needed which needs to be corrected. Up to 1,200 homes could be provided on part of this site – as opposed to the 3,000 over the total site that has been publicised.

The ML site, whilst currently classified as Green Belt, is well contained by existing urban and natural boundaries, urban Woking to the south and east; the A320 to the west which is far better able to cope with traffic volumes than surrounding roads at the other proposed sites and the Bourne stream to the north.

Planning permission to develop part of the site was granted in 2012

The top part of this site includes pre-developed land which is now semi derelict

There is no current public access to the ML site, unlike the other proposed sites

The ML site has no local or national landscape designations unlike the proposed Mayford or Pyrford sites

WBC's adviser's report describes the ML site as low in suitability for development whereas again Mayford and Pyrford are classed as very low in suitability.

WBC personnel acknowledged in 2015 that development at the ML site would merely impact on the landscape. By contrast they assessed the impact at all three of the alternative sites (Byfleet, Mayford and Pyrford) as very negative.

The possibility that more affordable housing could be incorporated into the project due to the land being less costly than the other sites.

Significant economic and social benefits at the single ML site which do not exist at the six other sites.

- o proximity to employment (St Peter's Hospital; McLaren & the Plant Agency at New Haw)
- o viable public transport which is absent at the other sites
- o economies of scale from using a single site
- o less traffic congestion; better safety and access during construction and when occupied.
- o direct road links via the A320 to Woking town centre and the M25
- o potential for superior infrastructure such as medical, schooling, waste water and improved public transport

- o part of the north of the site is publicly owned so the sale would benefit council tax payers
- o significantly fewer residents would be affected by a single site development

It is not necessary to include the New Zealand Golf Course in the development.

Martyrs Lane will provide the best benefits; have the least impact on residents and minimise disruption.

**Officer Response:**

The representation is correct, the number of new homes is 1200. It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose

and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The references to Peter Brett's report is noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, singles out the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst

this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

Not able to accept the terms of this current consultation because the six sites have not been 'safeguarded' as implied by this consultation. They were proposed in the Regulation 18 consultation, but objections have not been answered. The choice is therefore a false choice which should not have been presented.

Object to the two sites in Pyrford being included in this consultation for the following reasons:

The Green Belt boundary review included the Pyrford sites in Parcel 9. It concluded that the fields serve two critical Green Belt purposes – firstly in restricting sprawl and secondly in safeguarding the countryside from encroachment. The report explains that by critical it means that the continued inclusion of this parcel within the Green Belt it is of paramount importance. It is the highest category of defence possible. For these reasons the parcel is identified by the report as having very low suitability as an area of search based on the assessment of greenbelt purposes.

The report also stated that the land is considered to be in the category of Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The exact agricultural quality of the land has not been established.

The parcel is identified as within or adjacent to 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. The escarpment is considered to be a key landscape feature in the Borough and this is the principle reason that the report considers there to be a major environmental constraint on developing the Parcel.

The rural character of the area would be harmed. The Green Belt boundary review concluded that Parcel 9 has a rural character which ranged from having no capacity to change to low capacity to change. The Parcel falls into the highest categories of constraint to development. Since the report Surrey County Council has conducted a Landscape Character Assessment which also concludes that the area is rural in character and that the fields are important in contributing to this feel.

The councils own sustainability appraisal states that both fields score double negatively in the category 'Conserve and enhance and where appropriate make accessible for enjoyment the natural, historic and cultural assets and landscapes of Woking.'

The decision to put forward the fields for removal from the Green Belt was taken on grounds of availability alone. GB13 wasn't recommended for removal by the Brett report and no subsequent evidence was produced to justify its inclusion. Ashley Bowes has stated:

'I am of the view that the draft DPD is unsound in its current form, in that contrary to s.19(2)(a) Planning and Compulsory Purchase Act 2004, proposed site allocations GB12 and GB13 are not

in accordance with national policy within the NPPF. In particular, the necessary "exceptional circumstances" to justify release of those sites from the Green Belt is not supported by the conclusions of the evidence upon which the Council rely. It is clear the evidence does not support the choice of the two fields.

The choice of the Pyrford fields is based on inadequate evidence and cannot be justified.

The two fields, as noted by the Green Belt Review, are not near a doctor's surgery , secondary school or train station. The primary school and nurseries are all oversubscribed.

Changes to the roads in the Pyrford area are not possible without harming the character of the area. The narrow roads are built on ancient trackways and contribute to the rural character of the area. The B382 Old Woking Road is already a severely congested road and it is uncertain what will be the impact of the enlarged International School (200 to 1100 pupils), development at Sheer House and Broadoaks in West Byfleet, plus possible development at West Hall and Sheerwater. The B367 which runs through the centre of Pyrford is already severely congested during the school run period. The Pyrford Neighbourhood Plan has identified the verges along this route as playing a significant role in contributing to the character of the village and therefore widening of the road is not an option. Pyrford is already under threat from a huge traffic increase from the proposed developments at Garlicks Arch near Burnt Common and the Former Wisley Airfield. The impact of these and other proposed developments will undoubtedly bring further traffic from Ripley via Newark Lane. No traffic studies have been conducted into the effect of all these developments.

The government Housing White Paper recommends higher density building. This is inappropriate in an area surrounded by Conservation Areas. The genuine need for smaller properties would be better met elsewhere.

The footpaths and bridleways in the area are recognised as being of special importance and are used for recreational purposes. The footpaths are ancient and afford attractive views, including uninterrupted views of the North Downs. The Heritage setting of Pyrford Village and the character of the area as enjoyed from the footpaths will be harmed by development of the two fields.

Particularly upset by your response to this:

During the preparation of the Site Allocations DPD the Council consulted with Surrey Wildlife Trust and Natural England to discover the biodiversity value of each of the proposed sites. Overall the preferred sites did not raise any objection from Surrey Wildlife Trust or Natural England based on existing biodiversity features that could not be addressed.

Will pursue this matter with Surrey Wildlife Trust. There will undoubtedly be a loss of biodiversity regarding the birds and mammals which migrate between Pyrford Common and the farmland. Has spent many hours observing the farmland birds using this area and it is impossible to mitigate this loss.

The south east is an area of high water stress and sewerage systems in the area are considered adequate only to 2026. There has been no serious exploration as to whether the already creaking water supply and sewerage systems could cope with the increased demand. There are known sewerage problems in this area and exacerbating this will affect the water quality of the River Wey.

Background air quality is not considered and poor air quality results in many thousands of deaths every year. The impact of increased traffic on air quality must be taken more seriously.

Objects to the Safeguarding of Green Belt Land.

The government White Paper on housing states that 'authorities should amend Green Belt boundaries only when they can demonstrate that they have examined fully all other reasonable options for meeting their identified development requirements.'

The Council has identified Green Belt land which is capable of delivering at least 900 dwellings during the current plan period, well over the 550 homes targeted in the Core Strategy. The intention to revise boundaries such that a further 1,000 units could be delivered in the Green Belt is a decision which cannot be justified.

The eleventh hour inclusion of land to the east of Martyrs Lane as a potential safeguarding site proves that safeguarding is an inadequate method of producing enduring Green Belt boundaries. Safeguarding results in the blighting of Green Belt land. There is also a great danger that because of the Duty To Cooperate, that these sites will be brought forward to satisfy housing need in other areas. This contradicts the government's commitment to protect the Green Belt, reaffirmed in the Housing White Paper.

#### **Officer Response:**

In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This is set out in further detail in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 1.0 and 2.0.

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future

development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79–95 Lovelace Drive, Teggs Lane, Pyrford

GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the emerging Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

Objection to the possible safeguarding of Green Belt land in Pyrford for future development needs (referred to as GB12 and GB13) is noted.

As set out in table 3.2 of the Green Belt boundary review, all parcels of land except for parcels 3,5,6 and 29 of are significant, major or moderate importance to the purposes of Green Belt to some degree. The purpose of the Site Allocations DPD is to allocate sites for development, safeguard land for future development needs and allocate sites for SANGs (suitable alternative natural green space). This plan led approach will make sure that any land released for development is the most sustainable when compared against reasonable alternatives. If the Council were to go against the recommendations of the Core Strategy Inspector and not prepare a Site Allocations DPD, then it would increase the risk of speculative and opportunistic unplanned development in the Green Belt based on a lack of housing supply. This could, based on the Council's evidence, have a far greater impact on the purpose and integrity of the Green Belt compared to the sites identified by the Council. This unplanned growth could also have significant impacts on the provision of essential infrastructure and services. It is therefore critical that the Council proceeds with the Site Allocations DPD process and identifies specific sites in both the existing urban areas and the Green Belt for existing and future development needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this

recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The reasons why the sites scored a double negative for conserving and enhancing the natural, historic and cultural assets and landscapes of Woking are clearly set out in the SA. The SA however identifies that the impacts could be mitigated by detailed site layout and design to retain as much openness as possible and landscape buffers to reduce the visual impact of development. For GB12 in particular, this is similar to the recommendations set out in the Green Belt boundary review. The conclusions of the Green Belt boundary review state that 'the landscape assessment notes that this site (GB12) is more discrete, partly contained by trees and set beyond the prominent slopes to the east. The site is therefore under consideration for release from the Green Belt'.

The impact of development on the escarpment can be reduced by reducing the amount of residential development and increasing the proportion of open space allocated for GB13, as set out in the SA. The matters regarding detailed site layout and the provision and distribution of open space within the site would be considered and dealt with at the development management stage.

The Surrey Landscape Character Assessment defines the landscape character of the wider Surrey area and provides a detailed assessment of the land to the south-east of Woking (parcel SS10: Woking to Byfleet Settled and Wooded Sandy Farmland) which includes both GB12 and GB13. It does not specifically assess these two sites as the assessment is a strategic one and not site specific. Nevertheless the Evaluation and Guidance of parcel SS10 makes recommendations of how development could be appropriately accommodated within the assessment parcel. Based on this information, the Council is satisfied that development can be achieved within sites GB12 and GB13 without creating a significant adverse impact on the landscape character of the wider area as well as the specific heritage and landscape designations on and in close proximity to the sites.

Whilst sites GB12 and GB13 score negatively on some of the sustainability appraisal criteria, it is important to consider their scoring across all 17 sustainability criteria as well as considering these scores against the other sites assessed by the Council.

Regarding the representation on the land availability, availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. Paragraph 182 of the NPPF deals with examination of local plans and it requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- o Should be deliverable over its period;
- o Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of all seven proposed safeguarded sites at both the Regulation 18 stage and Martyrs Lane consultation.

As part of the Site Allocations DPD process, the Council has written to landowners of all of the sites in the DPD, to confirm the deliverability of the sites included within it. As set out in the draft document, the six proposed Regulation 18 safeguarded sites are considered to be deliverable based on the information submitted by the landowners. As part of the Martyrs Lane consultation, the Council has written to the various landowners within the site boundary. For information, the New Zealand Golf Course and McLaren Technologies Limited have confirmed that the land in their respective ownership will not be made available for residential development. It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the Martyrs Lane site is the most sustainable when compared with the original six safeguarded sites.

The views of Councillor Bowes on the soundness of the draft Site Allocations DPD have been considered by the Council at its meeting on the 20th October 2016. The Council, on the recommendations of the LDF Working Group, took the decision to consult on the land to the east of Martyrs Lane as a possible substitute for the six sites originally identified for safeguarding in the Regulation 18 version of the Site Allocations DPD. The consultation will inform the Council's decision on its preferred safeguarding option for the Regulation 19 consultation and subsequent Examination.

Regarding the lack of infrastructure in Pyrford, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

As set out in the list of transport evidence base documents above, the Council has carried out an assessment of the development impacts of the Site Allocations DPD in combination with the development proposals within the wider area. This study is on the Council's website.

Regarding the Housing White Paper: Fixing Our Broken Housing Market, the White Paper sets out a number of proposed amendments to the NPPF in paragraph 1.53. The first proposed amendment seeks to increase housing density where there is a shortage of land for meeting identified housing need and the second proposed amendment seeks to increase residential density in urban locations that are well served by public transport. However it should be noted that the third proposed amendment set out in the White Paper seeks to ensure that the density and form of development reflect the character, accessibility and infrastructure capacity of an area, and the nature of local housing needs. This is broadly consistent with the policies of the Core Strategy and the Development Management Policies DPD as well as the design principles set out in the Working Design Supplementary Planning Document (SPD). Therefore development of any of the proposed Green Belt sites, including those proposed to be allocated for safeguarding, should be designed to the highest design standards and ensure that housing density does not affect the quality and character of an area and the general well-being of residents.

The heritage and amenity value of the sites are noted and the relative merits of the sites will be considered by Members as part of the Site Allocations DPD process. These landscape features are already highlighted in part in the Surrey Landscape Character Assessment (2015). Whilst this part of the Green Belt provides amenity/recreation value, the overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Regarding the representation on biodiversity, the Council has consulted with the relevant statutory and non-statutory consultees on this matter and their representations have been taken into account in preparing the Site Allocations DPD. The Council is committed to working with these consultees during the plan making process and beyond to ensure that any of the sites allocated or safeguarded for development do not have a significant harmful impact on biodiversity that can not be mitigated.

The Council has consulted with the relevant utility providers as part of the on-going Site Allocations DPD process. As specifically set out in paragraphs 3.9 and 3.10 of the Regulation 18 consultation Issues and Matters Topic Paper, there is no risk to water supply over the plan period as a result of planned development, whilst Thames Water has provided specific wording

to be incorporated into the key requirements of specific sites to ensure that wastewater and sewerage infrastructure needs of development are fully assessed and where necessary mitigation provided as part of the development management process.

The environmental implications of development, regardless of whether it is in Pырford or elsewhere, will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

The requirement to safeguard land for future development needs as part of the plan-making process is set out in paragraph 85 of the NPPF, in particular bullet points 3, 4 and 5. As set out in the draft Site Allocations DPD, the land to the east of Martyrs Lane consultation paper and the Regulation 18 consultation Issues and Matters Topic Paper, the Council is seeking to establish the principle of safeguarded land to ensure the development plan is in general conformity with the requirements of the NPPF. The release of these proposed safeguarded sites for development will only be considered following a review of the Core Strategy and or the Site Allocations DPD. The Council has also sought legal opinion on the requirement to safeguard land for future development needs. The legal opinion, as set out in the Minutes to the LDF Working Group (1st July 2016), stated that 'It has been suggested that the Council does not need, either through the Green Belt boundary review or the draft Site Allocations DPD, to identify land or sites to meet the projected housing need for the period 2027 to 2040. However, I consider that, hitherto, the Council has clearly adopted the right approach and would be committing a justiciable error if it proceeded otherwise'. It concluded by stating that 'The Council has adopted the correct approach in seeking, through the Green Belt boundary review and the Site Allocations DPD to identify land or sites to meet the projected housing need for the Borough in the period between 2027 and 2040'. The Council therefore considers the Site Allocations DPD, and in particular the safeguarding of land for future development needs between 2027 and 2040, to be consistent with national planning policy.

Whilst the Housing White Paper reconfirms the government's commitment to protecting Green Belt land, the White Paper does not propose any material change in national Green Belt policy. The Core Strategy was prepared and found sound in the context of the NPPF and in particular the Green Belt policies within it.

Matters regarding the Duty to Cooperate have been addressed by the Council in the Duty to Cooperate Bodies Topic Paper.

**Customer Name:** Burhill Group Ltd

### **Summary of representation:**

Object to the proposal.

The Housing White Paper (February 2017) proposes amendments to Green Belt policy. Although not yet policy, it is essential that the Council pay regard to the likely direction of travel of policy. It should respond to paragraphs 1.38 and 1.39 of the White Paper relating to Green Belt reviews.

A further White Paper change proposes Ancient Woodland and aged or veteran trees are added to footnote 9 of the NPPF (regarding where development should be restricted). The significance of trees on the NZGC has yet to be assessed – it is essential this exercise be undertaken.

Promoted both sites in Pyrford at Regulation 18 consultation stage as they accord with NPPF paragraph 47 guidance i.e. they are suitable, achievable, deliverable and viable. In response to the consultation, on 1 July 2016 Officers recommended to the LDF Working Group the DPD should progress as per original recommendations.

This latest consultation on a site already appraised is a waste of limited public resources brought about to delay unnecessarily the plan-making process. If this undeliverable and less sustainable site is progressed, the DPD would be found unsound at Examination as it would not be justified, effective or positively prepared (the final one is most pertinent given the proposal came about as a last minute u-turn, unsupported by the Council's own evidence base). Neither professional study assessing the release of this land has supported it – a highly material consideration. It would therefore be found unsound at Examination.

The approach leading to this proposal is flawed. The LDF Working Group ignored the advice of the Head of Planning and Deputy Chief Executive, who advised at the meeting (as minuted) that this area of land was not recommended in the Green Belt boundary review (it had been rejected by the review) nor the Sustainability Appraisal (SA); and that it was not known whether the NZGC would be available for development and therefore be deliverable. Martyrs Lane does not score as well in the SA as the other sites which it is suggested it replace. The consultation is thus not required or necessary because the site is not suitable, available, or achievable. The constraints to development of the site are not matters that can be overcome, so it should be rejected by the Council in favour of existing sites which scored more highly in the SA. Notwithstanding the concerns of the Head of Planning and Deputy CEO, the LDF Working Group resolved to consider the development potential of Martyrs Lane.

The Green Belt boundary review concluded at paragraph 3.5.11 that removal of any of this land would leave an area of development unconnected to the urban area, and make a significant incursion into the Green Belt. Parcel 2 was therefore not recommended for removal.

The NZGC should have been contacted after the July Working Group meeting to see if it would be available. Such a simple query would have saved time, resources and formed an important part of the evidence base.

Cllr Bowes is biased towards his constituents living close to some of the originally proposed sites.

The Hankinson Duckett Landscape Assessment and Green Belt Review and SCC Strategic Transport Assessment reach the same conclusions as WBC's officers and Peter Brett Associates, in that the land at Martyrs Lane is not suitable for release from the Green Belt. This further evidence has also been ignored by the Council. The Landscape Assessment concludes that both parcels are critically important in their contribution towards the purposes of the Green Belt in question. It also recommends further work to determine the quality of the internal vegetation and its landscape quality in comparison with the adjacent SPA before the site could be allocated – this has not yet been done, yet the Council progressed to this consultation. No justification has been given stating why this recommendation has been ignored. Despite this, the Council's own officers have appraised areas of the site who state in the LDF Working Group report that on landscape grounds the site is less well suited to development than a number of originally proposed sites. All this professional advice has been ignored by the Working Group. Added to this, BGL's landscape consultants professionally assessed the land east of Martyrs Lane in terms of its contribution to Green Belt purposes, and found both parcels perform a very strong contribution in preventing urban sprawl, coalescence and safeguarding the countryside.

The constraint of the TBH SPA needs to be addressed. A survey of trees needs to be undertaken, particularly to identify veteran or aged trees.

The results of the SCC Addendum Report to the Strategic Transport Assessment led officers to conclude (as minuted) that the suggested option of providing 900 or 3000 additional dwellings would create considerable more impact than other smaller development sites as proposed in the DPD. Additional concerns regarding traffic impacts on air quality have been ignored.

BGL commissioned its own assessment of highways impacts of the proposal, concluding that development of the site would have a detrimental impact on local junctions, such as the Six Crossroads junction and on several sections of the local highway network and existing transport issues would be exacerbated.

Despite the Head of Planning's advice, based on earlier and these latest studies, that the Martyrs Lane site should not be safeguarded, this recommendation was not accepted, suggesting the Council had decided on this course of action irrespective of the evidence it had called for, which would appear to make it inevitable that the Plan will be found unsound at Examination. Although initial recommendations to the Council which called for the Martyrs Lane site to proceed to Regulation 19 consultation were amended in favour of a bespoke round of consultation, it is considered that this consultation exercise is a sham (although it is hoped

that this exercise merely genuinely serves to re-enforce that the proposed substituted site would not form the most appropriate strategy).

Agree with the findings of the HDA study:

- the parcel is of critical importance to the purpose of checking unrestricted sprawl of large built-up areas;
- the parcel is of critical importance in preventing neighbouring towns merging into one another (the site would reduce the separation between Woodham and Ottershaw to 1km from 1.9km);
- the land is situated in a very rural area and development would diminish its countryside characteristics – the parcel is of critical importance in assisting in safeguarding the countryside from encroachment;
- whilst there is limited contribution towards preserving the setting and character of a historic town, the wider rural setting of the site should be considered e.g. the character and distinctiveness of the SNCI and Horsell Common;
- the NZGC assists in safeguarding the countryside from development and encourages the recycling of derelict and other urban land (whilst the NZGC could be defined as an urbanising use, it is an entirely appropriate use in the Green Belt).

The loss of the golf course would impact on the community as it would result in the loss of a sports facility.

There would also be loss of woodland and heathland which support the SPA to the west, which would impact on the environment, which is not in accordance with paragraph 9 of the NPPF because it will not conserve or enhance the natural environment which has been identified to be of high value. It would have a harmful impact on an SSSI and SPA, and may impact on valuable trees (as per White Paper proposals). It would also therefore conflict with paragraph 10 as it would not be sustainable development. The promotion of unsustainable development conflicts with paragraph 14 of the NPPF. The NPPF requires sites to be allocated where significant adverse impacts are avoided. They can be avoided by not allocating this site for development.

The proposal does not rely on a robust evidence base and conflicts with NPPF guidance on the preparation of development plans.

The proposal is neither deliverable or achievable (paragraph 47 of the NPPF).

It is not consistent with guidance in the NPPF on defensible, long-term boundaries and safeguarded land (paragraph 85).

Part of the site is in flood zone 2 or 3. Alternative sites exist that are not in the floodplain, and accord with NPPF guidance.

Both Surrey Heath Borough Council and Runnymede Borough Council have objected, which forms a material consideration – they both challenge the approach taken by WBC on a number

of grounds. The Runnymede Officer's report to its Planning Committee on 15 February exclaims regret that it hadn't received earlier notification of WBC's proposals and questions whether WBC has satisfactorily met the legal test described by the Duty to Cooperate. It also questions whether the proposal is sufficiently justified in line with Woking Core Strategy and relevant national policy and guidance, in that there has been no material change in circumstances in Planning terms since the publication of the draft Site Allocations DPD and its Regulation 18 consultation, where assessments rejected parts of the site. Inclusion of the site is considered to result in urban sprawl and merging of towns. Runnymede is also concerned with congestion of the A320, taking into account cumulative impacts from the Fair Oaks and Longcross proposals.

The recommendations of the Council's own Head of Planning should form the basis of the Plan, which are supported by the Council's own consultants, including Surrey County Council.

**Officer Response:**

Objection is noted.

Officers are aware of the proposals in the Housing White Paper. It is important to highlight that the Housing White Paper does not seek to change the direction of national policy as set out in the NPPF, and neither is it an in-principle new policy. It is only intended to clarify what the existing Green Belt policies mean in practice. Woking Borough Council had always understood the interpretation of the national policy on Green Belt and is already practicing what the White Paper is proposing and as such there will be no need to carry out any further work as suggested by the representation. The Council has sought further clarification on what the compensatory improvements to remaining Green Belt would be in practice in its response to the consultation on the White Paper. Even then, the Council can demonstrate that it can and is meeting this particular requirement.

The NPPF and White Paper both offer the same strict protection to the Green Belt. The principle that once established the Green Belt boundaries should only be altered in exceptional circumstances through the review of the Local Plan has not changed. The Council has rigorously applied this principle to underpin the preparation of the Core Strategy and the Site Allocations DPD.

Paragraphs 1.38 and 1.39 of the White Paper propose to amend and add to national policy to make clear that authorities should amend Green Belt boundaries only when they can demonstrate that they have examined all other reasonable options for meeting their identified development requirements – which the Council has already demonstrated. The Strategic Housing Land Availability Assessment (SHLAA), the Employment Land Review and the Employment Topic Paper are evidence to demonstrate the assessment of brownfield sites. The Core Strategy policy CS1: A spatial strategy for Woking Borough, and its reasoned justification, seeks to maximise the use of brownfield land. The high indicative densities set out in Policy CS10: Housing provision and distribution, also reflects this principle. Also contributing to the comprehensive assessment of brownfield sites for the preparation of the draft Site Allocations

DPD is the Sustainability Appraisal Report, which assesses all reasonable alternative brownfield sites in a consistent manner against a set of sustainability objectives.

There is therefore a clear and strong evidence base and policy framework to prioritise and support development on previously developed land at high densities subject to character and environmental considerations. The Council does not need to do any further work in response to the White Paper.

The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees as set out in the White Paper. This is addressed in further detail below.

With regards to the approach taken by the Council: the Council is transparent about the conduct of its meetings and has published the Officers' advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agreed that the consultation on the land east of Martyrs Lane was necessary and the representations that are received during the consultation will be a source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of Officers, as quoted in the representation, it is clear from the Minutes of the meetings that they carefully considered the report and advice of Officers, including the Deputy Chief Executive and Planning Policy Manager, before reaching their recommendations. The Working Group also had all the necessary evidence before them to inform their recommendations, but it should be accepted that different judgements could be made on such a critical issue, and the Working Group clearly justified their recommendations.

The Officers report and its recommendations therein have not in fact been ignored by the Council as suggested in the representation: the Council has not yet made any decision on the Officers report or the recommendations of the Working Group. It has rightly reserved its right and authority to do so after careful consideration of the representations received during the Martyrs Lane consultation. The request for further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and to make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided reasons for their recommendations.

It is not incorrect to state that Cllr Bowes made a recommendation to Council that the Regulation 19 consultation proceed whereby the Martyrs Lane site is safeguarded: in fact he presented an amended recommendation to Council at its October meeting recommending that a further public consultation exercise take place in respect of the possibility of substituting the six previous sites with the land to the east of Martyrs Lane, and that the responses would be considered to help determine the contents of the Regulation 19 version of the DPD. Appropriate procedure has been followed in this regard. Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD (Regulation 19). Councillor Bowes has also been transparent about his proposed amendment at the Working Group and at Full Council. There is nothing improper about his conduct in this regard. He provided clear reasons for his amendment and it will be up to the

Council to judge whether or not the recommendations of the Working Group are rational, taking into account all available evidence, including that referred to in the representation.

It is important to emphasise that the decision to consult on the possibility of safeguarding the land east of Martyrs Lane was made by a vote of Full Council and not by the LDF Working Group. As an advisory Group, the Working Group appropriately carried its duties by making recommendations to Council. The Group gave clear and specific reasons for its recommendation. The Council took them into account before coming to its decision to consult on the land east of Martyrs Lane.

A change in circumstances that occurred since the Regulation 18 version of the Site Allocations DPD was published led to the LDF Working Group recommendation. At the time of the Green Belt boundary review and the Regulation 18 consultation, the part of the land in ownership of McLaren had planning approval for 60,000sq.m of applied technology centre (ref. PLAN/2011/0823) and was therefore not assessed on its own or as part of a comprehensive development of the total area. Since then, McLaren has got a similar planning approval (albeit 8,000sq.m less floorspace) to consolidate their operations at their existing site west of the A320 (ref: PLAN/2014/1297). Part of the condition for the new planning permission is that the planning approval on the land east of Martyrs Lane will be revoked when development commenced at the existing site. This is a significant change of circumstances that was not previously considered, and justified the testing of this land in combination with the other adjacent sites as a reasonable alternative. The LDF Working Group gave clear reasons why the land should be identified for consultation, following this change in circumstances, which is documented and on the Council's website. It is therefore incorrect to suggest that there was no proper consideration or notification about why the site was identified for consultation.

The LDF Working Group considered the Officers report on the analysis of the Regulation 18 consultation at its meeting in September 2016. It made its recommendations for the Council to consider at its meeting on 20 October 2017. The Council could not have consulted on what was merely a recommendation of the Working Group until it had considered the recommendations and made a decision. It was unfortunate that the New Zealand Golf Club could not be consulted earlier as suggested in the representation. Nevertheless, the Council did its best to consult the Club as soon as it was reasonable to do so after the Council had made the decision to consult on the recommendations of the Working Group. In this context, there was nothing deliberate or improper for not consulting the Club sooner.

The Council acknowledges that the New Zealand Golf Club is a significant landowner within the land east of Martyrs Lane and is aware of its confirmation that the land in its ownership will not be made available for the future development proposals of the Council. The availability of the land is a material consideration for the future deliverability of the land as highlighted by footnote 11 of the NPPF. It is proposed that if safeguarded, the land will be required for development between 2027 and 2040 and the NPPF highlights that to be deliverable, there should be the prospect that the housing will be delivered on the site within five years. In this particular context, the New Zealand Golf Club's representation demonstrates that there is no prospect of the land ever being made available now or in the future between 2027 and 2040.

For information, McLaren has also made representations to clarify that they do not object in principle to the safeguarding of the land to meet future development needs but only on condition that the part of the land in their ownership is allocated as a strategic employment site to meet the specific business needs of McLaren. Without both parcels of land, Officers accept that it would be unlikely that 1,200 new dwellings could be achieved on the land. This is a matter that the Council has to take into account when deciding its preferred approach to safeguarding.

The ultimate goal that should drive the Council's overall decisions about the preferred approach to safeguarding should be the need to achieve sustainable development and the robust evidence to justify its decisions. In this regard, if the Council decides on the available evidence that the land east of Martyrs Lane is the most sustainable to meet the future development needs of the borough, the lack of availability of parts of the land should not be an absolute constraint to the development of the entire land. The Council has Compulsory Purchase Powers that it could choose to use to acquire land for common good, and the appropriate legal advice will be sought in this regard if necessary. This would facilitate the deliverability and achievability of the site in accordance with paragraph 47 of the NPPF, as cited in the representation.

It is important to clarify that the Council has not yet made any choice to safeguard the land east of Martyrs Lane. It has only rightly consulted on the possibility of substituting the land east of Martyrs Lane for the six sites that were originally published as part of the Regulation 18 consultation of the Site Allocations DPD before it decides on the more sustainable of the two options. The Council has said that it will make the choice about the preferred approach to safeguarding after careful consideration of the representations received during the Martyrs Lane consultation, in addition to the evidence cited in the representation including the Green Belt studies, Sustainability Appraisal, and transport assessments. Whilst availability of land is a material consideration for the deliverability of any proposal, on its own, it should not be the only overriding consideration to outweigh all other benefits, including the evidence from the public consultation exercise and other sustainability factors. The consultation was therefore justified on the basis of the evidence it could provide to inform key decisions of the Council. Paragraph 182 of the NPPF deals with the examination of Local Plans. It stresses that to be found sound, a Local Plan amongst other things must be justified. The plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. In this context, it would have been irresponsible of the Council if it did not at least consider the land east of Martyrs Lane as a reasonable alternative in the light of the changing circumstances regarding the part of the land in the ownership of McLaren which occurred after the Regulation 18 consultation, the need to assess the land in a comprehensive manner and the apparent need to ensure a defensible Green Belt boundary after the release of Green Belt land. The delivery of the Core Strategy will impact on all aspects of life of people who live and work in the borough. In this regard, Members and Officers of the Council has a duty to familiarise themselves with all the necessary information that might be relevant to inform its decisions about the Site Allocations DPD, which is one of the key means for delivering the Core Strategy.

Paragraph 80 of the NPPF defines the five purposes of the Green Belt, as referred to by the representation. Of particular relevance to this representation are:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

As highlighted in the representation, the Council has carried out the following two studies that assessed the site against the above purposes of the Green Belt.

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the studies, the Council would agree with the representation that the land to the east of Martyrs Lane is important in its contribution towards the purposes of the Green Belt, in particular, its contribution towards checking urban sprawl, preventing settlements merging and safeguarding the countryside. This is a matter the Council will have to weigh in the balance in its decision about the preferred approach to safeguarding. The Landscape Assessment also assessed the land in terms of its contribution towards preserving the setting and special qualities of historic towns and in assisting urban regeneration by encouraging the recycling of derelict and other urban land. The land was found to have slight/negligible importance to the former purpose as it does not contribute to any historic setting, physically or visually, with the exception of the woodland setting of Horsell Common. The wider rural setting, as referenced in the representation, was taken into account in the assessment. The land was also found to have slight/negligible importance in assisting urban regeneration by encouraging the recycling of derelict and other urban land. The assessment took the golf course – as an urbanising land use – into account in reaching this conclusion. It was considered that the degree of contribution towards these purposes were on balance, not considered relevant to the overall assessment of the Green Belt purposes, in contrast to the critical importance of the land's contribution to the first three purposes referred to above. Nevertheless, Members can of course take into account the full conclusions of the Landscape Assessment, including the negligible contribution the site makes towards the fourth and fifth purposes of the Green Belt, in reaching their decision.

It should be noted that if the representation argues that detrimental impacts on the wider rural setting of the Martyrs Lane area be considered under the fourth Green Belt purpose, this should equally be applied to the previous six sites that were considered. However, Officers agree with Peter Brett's interpretation in paragraph 3.2.25 of the report in that the specific purpose of the Green Belt to preserve the setting and special character of historic towns was not considered relevant because by definition Woking and its villages are not classified as historic towns. See Section C of the Regulation 18 consultation Issues and Response Topic Paper for further details.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development.

Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors.

It should be noted that the Council carried out the transport assessment to quantify and forecast vehicular trips that would be generated by various development options to help determine appropriate measures of mitigation to address the adverse impacts of proposed development, including impacts on air quality. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development. The Council has not ignored the findings of the studies: the Council accepts that the safeguarding proposals would lead to increase in traffic as demonstrated by its own studies, and mitigation will be needed to address that. It is working with the relevant bodies to determine the appropriate mitigation measures to enable the sustainable delivery of the proposals.

The Council has robust policies to manage air quality impacts as a result of development. In particular, Policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as policies DM5, DM7 and DM8 of the development Management Policies DPD that would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

The Council acknowledges that the land east of Martyrs Lane is used for sports, including the New Zealand Golf Course, and that proposed safeguarding of the site could potentially lead to the loss of this facility. From the available information, it is clear that the proposal would lead to the loss of an existing operational sports facility with a history to protect when there is a presumption against the loss of such facilities in both the NPPF and local policy. This is a key consideration to inform the decisions of the Council. The Council has received a representation from Sport England which it will take into account – this can be accessed for further information on this issue.

With regards to impacts on the natural environment, including woodland, trees of historic value, and heathland, as cited in the representation, the land is not covered by any absolute environmental constraints. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. The site would have been designated as SPA by Natural England if any presence of Dartford Warbler and Nightjar were significant enough to justify designation. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity assets are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD. The Council accepts that it has not carried out a detailed assessment of landscape features on the site, including trees and woodland, and recognises the importance for doing so. However, the appropriate time to undertake such a study would be at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Council accepts and has always acknowledged that the SPA should be accorded the uppermost environmental protection under the European Union Directive. The importance of the SPA and the SSSI is within the hierarchy of environmental designations is acknowledged in Policy CS7: Biodiversity and nature conservation of the Core Strategy. Policy CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy is a specifically crafted policy to avoid harm to the SPA as a result of development. The policy takes a precautionary approach to the protection and conservation of the SPA and development will only be permitted where the Council is satisfied that this will not give rise to a significant adverse effects upon the integrity of the SPA.

The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided adequate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the site. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected, and thus comply with national and local planning policy. Natural England does not have any objection in principle to the safeguarding of the site. It notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation.

In terms of sustainability of the site, the Council has carried out a Sustainability Appraisal (SA) to assess the environmental, economic and social implications of developing the site. The overall role of the SA is to ensure that the implications of developing the land and consequently of the Site Allocations DPD are managed to help achieve sustainable development. The outcome of the appraisal demonstrates that there are a number of negative, positive and neutral impacts for developing the site. The same Sustainability Appraisal Framework had been used to carry out a SA of the originally proposed six safeguarded sites. The SA Framework enables consistent information to be gathered to make comparative judgements between the sites. The Council therefore has significant information to inform decisions about the most sustainable site to safeguard for future development. It goes without saying that after balancing all the relevant factors, the Council will only safeguard the land east of Martyrs Lane to meet future development needs only if it felt that it will be the most sustainable land to develop when compared against the other reasonable alternatives, and thus comply with national planning policy as referenced in the representation. The main essence of this consultation exercise is to gather further necessary information to help Members make that decision. A judgment about the relative merits of the sites with respect to how they contribute to sustainable development will be made in the report to Members when all the other representations are analysed.

The representation believes the proposal is not consistent with the points in paragraph 85 of the NPPF regarding defensible, long-term boundaries and safeguarded land. The Council has recognised the need to plan beyond the Core Strategy period. The whole essence of safeguarding land in the Site Allocations DPD is to enable long term future development needs beyond the Core Strategy period to be met without having to review the Green Belt boundary again during this plan period. The approach taken in preparing the Site Allocations DPD will help ensure the enduring permanence of the Green Belt boundary well beyond the current plan period. Officers have purposefully included land in the site which is bounded by physical features such as the River Bourne to ensure a strong, defensible Green Belt boundary could be drawn. This is positive planning in line with the requirements of paragraph 85 of the NPPF.

Development at Martyrs Lane will only be concentrated on the part of the land in Flood Zone 1. This is made clear in the consultation document. The areas in Flood Zones 2 and 3 are included in the safeguarding area to ensure a defensible Green Belt boundary. As far as flood risk is concerned, there is no obvious significant difference between the two safeguarding options.

Runnymede Borough Council and Surrey Heath Borough Council have indeed made separate representations, and their concerns have been fully addressed in the Council's response available in the Duty to Cooperate Bodies Topic Paper.

Officers strongly disagree with their assertion that the Council has not met its requirements for the duty to cooperate by not consulting Runnymede and the neighbouring authorities prior to the consultation. The claim is factually incorrect. The Council resolved to consult on the possibility of substituting the land east of Martyrs Lane for the six original safeguarded sites at its meeting on 20 October 2016. Runnymede Borough Council and the other neighbouring authorities were notified of the Council's decision soon after that on 24 October 2016. The Council had not previously considered this matter. The proposal was referred to Council for consideration by the LDF Working Group and the 20 October 2016 meeting was the first time the Council had considered the matter.

Runnymede Borough Council was once again invited on 28 October 2016 to send the Council any informal representations they may have and for them to be taken into account before the proposal was formally published for consultation. They were also offered an opportunity to meet to discuss the details of the proposal and the nature of the consultation. The Council met them to do so. The consultation started on 6 January 2017 for a period of six weeks, and they were formally consulted. The Council is satisfied that it has gone beyond the requirements of the duty to cooperate to reach out to the neighbouring authorities and to listen to any concerns they may have, and it is not correct to suggest that Runnymede was not adequately consulted. The Council understands that the duty to cooperate is a continuous process and has subsequently been engaging with Runnymede and Surrey Heath Borough Councils after the consultation period to establish a framework for joint working in the future. The above clearly demonstrates that the Council has positively engaged with Runnymede regarding this particular issue.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development. Each policy in the NPPF including the Green Belt policies such as paragraph 80 are therefore servant to the overall goal of achieving sustainable development. Sustainable development is the overall goal of the Core Strategy and decisions about its delivery must also be seen in that context. The Government's definition of sustainable development in the context of the planning system is 'the reference to the three dimensions of sustainable development, together with the core planning principles and policies at paragraphs 18 – 219 of the NPPF. Planning judgments must therefore be holistic and should seek to balance the Green Belt policies with all other policies with sustainable development as the ultimate goal. Regarding the spatial distribution of development across the borough and the Site Allocations DPD in particular, meeting this goal in addition to the purposes of the Green Belt would include other evidence and factors such as the sustainability appraisal, proximity of sites to key services and facilities to minimise the need to travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect and feasibility for mitigating development impacts. It is also about creating sustainable places that links homes to jobs and key facilities and services by sustainable modes of travel. The decision of the Council for the purposes of the Regulation

19 consultation will rest on balancing all the above factors, using the available evidence. In accordance with paragraph 182 of the NPPF, the Council will only submit a Site Allocations DPD for Examination that it considers sound to avoid the risk of it being found unsound, acknowledging that the judgment on soundness is in the gift of the Independent Inspector of the Secretary of State.

**Contributor Reference:** 02342/1/001  
**Customer Name:** New Zealand Golf Club

**Summary of representation:**

New Zealand Golf Club Ltd is the owner of the majority of the identified land east of Martyrs Lane and is totally opposed to the Council's suggestion to safeguard the land as a potential future development site in the Council's Site Allocations DPD.

The land is not available for the proposed safeguarding. The club is a private members golf club that is more than 120 years old, with each full member owning voting shares. It is not a commercial concern. The club has an illustrious history and one of the most highly regarded heathland courses in Europe. The course was originally laid out in 1895 by Samuel Fergusson and one of the very few created and remodelled by Tom Simpson. It is one of his designs that has changed very little over the years.

There is no reasoned justification from the Council for the current consultation which is promoting a site that is not available and is not supported by the Council's own evidence base. The site is being promoted despite the unequivocal advice from the Head of Planning which confirmed that the site is not an appropriate location for residential development. The Council has gone against its own evidence by proposing the land as alternative for safeguarding.

The LDF Working Group has arbitrarily identified the land to the east of Martyrs Lane as an alternative to the previously identified safeguarded sites. No adequate reasoned explanation has been provided as to how the alternative site was identified and why other sites were not considered.

The proximity of the site to the Thames Basin Heaths SPA and the potential ecological implications has not been adequately assessed. A strategic impact assessment should be undertaken prior to the sites safeguarding and it is inappropriate to assume that the impact of development can be addressed through mitigation at the planning application stage.

The golf course has been managed for more than 120 years to maintain and enhance its biodiversity and ecological interest to provide a top quality backdrop to the playing of golf. The setting of the course, as one of the best-preserved Surrey heathland courses, is of considerable historical interest, as is the fact that the course is a signature project of the renowned course architect Tom Simpson. This cannot be replicated elsewhere. The development of the site will lead to a significant loss of biodiversity.

The land to the east of Martyrs Lane fulfils an important Green Belt function in terms of preventing urban sprawl, coalescence and encroachment into the countryside, as well as providing opportunity for outdoor sport. The Green Belt designation has also ensured the reuse of previously developed 'brownfield' urban land elsewhere at higher density in line with government guidance.

The Site Allocations DPD would be found unsound as it would be inconsistent with national policy, it would not be justified, it would not be effective and would not have been positively prepared.

The allocation of the site to the east of Martyrs Lane should not be considered as a safeguarded option for the period 2027 – 2040 and rather, the six sites that were previously included in the Regulation 18 Site Allocations Development Plan Document published for consultation in June–July 2015, all of which satisfy the relevant test of soundness, should continue to be safeguarded to satisfy the potential long-term development needs of the Council.

The Club's attention has been drawn to the potential of an amended proposal by the Council. In the event that alternative proposals are brought forward for partial substitution of part of the land to the east of Martyrs Lane for some or all of the safeguarded sites identified in the Draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), NZGC entirely reserves its position. If such a major change were to be proposed this would have to be fully explained with a detailed justification of which parts of the land to the east of Martyrs Lane is being proposed for safeguarding and which of the previously allocated sites are proposed to be substituted and the relative merits of each. If such a major change is to be proposed further consultation will be required.

The Council made no attempt to consult the New Zealand Golf Club prior to the formal consultation. The consultation would effectively be an informal exercise to gauge public reaction to the proposal. The concerns of the Club are shared by the local community and other organisations and landowners such as the newly formed Horsell and Woodham Neighbourhood Forum, Horsell Common Preservation Society and many of the landowners whose land were previously safeguarded in the draft Site Allocations DPD.

The proposal would be contrary to the provisions of national planning policy as set out in the NPPF for a number of reasons. It would lead to loss of biodiversity and sporting facilities, there is a strong local objection, it is not backed by evidence, a significant part of the land is not available and as such is not deliverable, development will lead to urban sprawl, proximity to the SPA has been ignored and there is risk of flooding.

Need for housing beyond 2027 has not been objectively assessed or appropriately justified. Based on the capacity of the safeguarded sites only 92 dwellings per year can be achieved between 2027 and 2040. This would suggest that the Council will be developing the site for up to 2,900 dwellings. No exceptional circumstances case has been established to identify land at the location.

The representation provides a chronology of the Site Allocations DPD process to date. These are set out in paragraphs 5.1 – 5.42, and the issues raised are all broadly summarised above.

The Club has provided letters written to the Council as supporting information to their representation. In summary the letters emphasises the fact that the land will not be available

for future development. It also expresses the Club's dissatisfaction of the manner the Council proposed the land as an alternative for safeguarding, and in particular, the role of Councillor Bowes who had previously made representation in July 2015 as a Ward Councillor. It is inappropriate for Councillor Bowes to chair the Working Group, which requires an independent and objective approach rather than the partisan perspective of a Ward Councillor. It would be inappropriate for Councillor Bowes to chair the Working Group when it considers representations as a result of the consultation. The LDF Working Group and the Council failed to provide clear and convincing reasons why the Officer's recommendations should not be accepted. The reasons given by the LDF Working Group were hopeless inadequate. The Council failed to gather the information needed to make informed and reasoned decision prior to taking it.

**Officer Response:**

The Council acknowledges that the New Zealand Golf Club is a significant landowner within the land east of Martyrs Lane and is aware of its confirmation that the land in its ownership will not be made available for the future development proposals of the Council. The availability of the land is a material consideration for the future deliverability of the land as highlighted by footnote 11 of the NPPF. It is proposed that if safeguarded, the land will be required for development between 2027 and 2040 and the NPPF highlights that to be deliverable, there should be the prospect that the housing will be delivered on the site within five years. In this particular context, the New Zealand Golf Club's representation demonstrates that there is no prospect of the land ever being made available now or in the future between 2027 and 2040. For information, McLaren has also made representations to clarify that they do not object in principle to the safeguarding of the land to meet future development needs but only on condition that the part of the land in their ownership is allocated as a strategic employment site to meet the specific business needs of McLaren. Without both parcels of land, Officers accept that it would be unlikely that 1,200 new dwellings could be achieved on the land. This is a matter that the Council has to take into account when deciding its preferred approach to safeguarding.

The ultimate goal that should drive the Council's overall decisions about the preferred approach to safeguarding should be the need to achieve sustainable development and the robust evidence to justify its decisions. In this regard, if the Council decides on the available evidence that the land east of Martyrs Lane is the most sustainable to meet the future development needs of the borough, the lack of availability of parts of the land should not be an absolute constraint to the development of the entire land. The Council has Compulsory Purchase Powers that it could choose to use to acquire land for common good, and the appropriate legal advice will be sought in this regard if necessary. The historic significance of the Golf Course is noted, and will be one of the factors that has to weigh in the balance when the Council makes its decision on the matter.

It is important to clarify that the Council has not yet made any choice to safeguard the land east of Martyrs Lane. It has only rightly consulted on the possibility of substituting the land east of Martyrs Lane for the six sites that were originally published as part of the Regulation 18

consultation of the Site Allocations DPD before it decides on the more sustainable of the two options. The Council has said that it will make the choice about the preferred approach to safeguarding after careful consideration of the representations received during the Martyrs Lane consultation. Whilst availability of land is a material consideration for the deliverability of any proposal, on its own, it should not be the only overriding consideration to outweigh all other benefits, including the evidence that from the public consultation exercise and other sustainability factors. The consultation was therefore justified on the basis of the evidence it could provide to inform key decisions of the Council. Paragraph 182 of the NPPF deals with the examination of Local Plans. It stresses that to be found sound, a Local Plan amongst other things must be justified. The plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. In this context, it would have been irresponsible of the Council if it did not at least consider the land east of Martyrs Lane as a reasonable alternative in the light of the changing circumstances regarding the part of the land in the ownership of McLaren which occurred after the Regulation 18 consultation, the need to assess the land in a comprehensive manner and the apparent need to ensure a defensible Green Belt boundary after the release of Green Belt land. The delivery of the Core Strategy will impact on all aspects of life of people who live and work in the borough. In this regard, Members and Officers of the Council has a duty to familiarise themselves with all the necessary information that might be relevant to inform its decisions about the Site Allocations DPD, which is one of the key means for delivering the Core Strategy.

The Council has been transparent by publishing the Officers advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agree as a matter of fact that the consultation was necessary and the representations that are received during the consultation are a source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of the Officers report, it is clear from the minutes of the meeting that they carefully considered the report before reaching their recommendations. That is an appropriate procedure to follow. It is not correct for the representation to suggest that the Council has rejected the Officers recommendations because the Council has not yet made any decision on the Officers report or the recommendations of the Working Group. It has rightly reserved its right to do so after careful consideration of the representations received during the Martyrs Lane consultation. The request for the further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided justification for its recommendations, and these were put before the Council for consideration. The Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD. Councillor Bowes made representations in his role as a Ward Member on the Regulation 18 consultation. He had been transparent about that, and the Council has also been transparent in publishing that information as part of the response to the Regulation 18 consultation. There is nothing improper about his membership of the Working and or as Chair of the Group. The Council has a procedure for selecting

councillors to serve on Working Group, and he is on the Group through that proper process. It is therefore not intended to remove him from the Group on the basis of this representation.

The Council has already carried out a sustainability appraisal to assess reasonable alternative sites. This study is already published on the Council's website. The land east of Martyrs Lane is an additional site that has been assessed based on the reasons given above. Beyond that, no other sites had been assessed.

The Council has carried out a Habitats Regulations Assessment Screening for the potential safeguarding of the land east of Martyrs Lane. The report sets out the actions to take before the land can be fully screened out. The report to the study can be accessed by this link: <http://www.woking2027.info/allocations/hradec16.pdf>. It is not envisaged that the potential development of the site would undermine the overall integrity of the SPA if the necessary avoidance/mitigation measures are put in place.

The Council accepts and has always acknowledged that the SPA should be accorded the uppermost environmental protection under the European Union Directive. The importance of the SPA is acknowledged within the hierarchy of environmental designations set out in Policy CS7: Biodiversity and nature conservation of the Core Strategy. Policy CS8: Thames Basin Heaths Special Protection Areas of the Core Strategy is a specifically crafted policy to avoid harm to the SPA as a result of development. The policy mirrors and is in general conformity with the requirements of Policy NRM6 of the South East Plan. The policy takes a precautionary approach to the protection and conservation of the SPA and development will only be permitted where the Council is satisfied that this will not give rise to a significant adverse effects upon the integrity of the SPA and biodiversity in general. The provisions of the policy will apply. It is therefore not anticipated that the development of the site would lead to a significant loss of biodiversity. It is highlighted that Natural England has responded to the consultation and has no objection in principle subject to agreeing the necessary measures of avoidance/mitigation.

The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided appropriate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the site.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. The Council is aware of surveys carried out about the locational relationship between development and the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will work in partnership with Natural England to agree appropriate measures of mitigation for any potential development on the site.

Paragraph 80 of the NPPF defines the five purposes of the Green Belt. Of particular relevance to this representation are:

- o To check the unrestricted sprawl of large build up areas;
- o To prevent neighbouring towns merging into one another; and
- o To assist in safeguarding the countryside from encroachment.

The Council has carried out the following two studies that assessed the site against the above purposes of the Green Belt.

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the studies, the Council would agree with the representation that the development of the land east of Martyrs Lane would lead to a degree of urban sprawl and a potential perception of towns merging. This is a matter the Council will have to weigh in the balance in its decision about the preferred approach to safeguarding. It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development. Each policy in the NPPF including the Green Belt policies such as paragraph 80 are therefore servant to the overall goal of achieving sustainable development. Sustainable development is the overall goal of the Core Strategy and decisions about its delivery must also be seen in that context. The Government's definition of sustainable development in the context of the planning system is 'the reference to the three dimensions of sustainable development, together with the core planning principles and policies at paragraphs 18 – 219 of the NPPF. Planning judgments must therefore be holistic and should seek to balance the Green Belt policies with all other policies with sustainable development as the ultimate goal. Regarding the spatial distribution of development across the borough and the Site Allocations DPD in particular, meeting this goal in addition to the purposes of the Green Belt would include other evidence and factors such as the sustainability appraisal, proximity of sites to key services and facilities to minimise the need to travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect and feasibility for mitigating development impacts. It is also about creating sustainable places that links homes to jobs and key facilities and services by sustainable modes of travel. The decision of the Council for the purposes of the Regulation 19 consultation will rest on balancing all the above factors, using the available evidence. In accordance with paragraph 182 of the NPPF, the Council will only submit a Site Allocations DPD for Examination that it considers sound to avoid the risk of it being found unsound,

acknowledging that the judgment on soundness is in the gift of the Independent Inspector of the Secretary of State.

The representation does not indicate the source of the information about the current willingness of the Council to amend the proposal. It goes without saying that the Council would not make such a decision without careful consideration of all the representations received during the consultation. Officers have not reported to Council with the analysis of the representations and as such there is no basis for this information. Having said that, in accordance with Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012, the Council will publish the Publication version of the Site Allocations DPD to give the general public the opportunity to comment on it before the Site Allocations DPD is submitted to the Secretary of State for Examination.

The LDF Working Group considered the Officers report on the analysis of the Regulation 18 consultation at its meeting in September 2016. It made its recommendations for the Council to consider at its meeting on 20 October 2017. The Council could not have consulted on what was merely a recommendation of the Working Group until it had considered the recommendations and made a decision. It was unfortunate that the New Zealand Golf Club could not be consulted earlier than it had wished. Nevertheless, the Council did its best to consult the Club as soon as it was reasonable to do so after the Council had made the decision to consult on the recommendations of the Working Group. In this context, there was nothing deliberate or improper for not consulting the Club sooner. The Council has received representations from the local community, Horsell Common Preservation Society and the Horsell and Woodham Neighbourhood Forum. These are dealt with separately and it is not intended to repeat them in this response.

The representation has misunderstood the assumptions used to estimate future housing supply between 2027 and 2040. The assumptions are credible, acknowledging that an exact housing requirement could only be determined as part of the review of the Core Strategy and an up to date evidence at the time. The 2027 – 2040 housing provision of 1,200 dwellings is on the basis that the Council will continue to provide 292 dwellings per year. For the 13 year period, this is estimated to be 3,796 dwellings. It is assumed that lower density development in the Green Belt of about 30dph will continue into the future. An intelligent assumption has been made that the urban area will continue to make a significant contribution towards housing supply during that period in line with the overall spatial strategy. The projection is that the urban area will provide about 50% of the total supply of housing during that period. A marginal allowance has been made for windfall development, which will continue to come forward during that time. Historical estimates over 10 years suggest that about 40 dwellings per year will be delivered through this source. On the basis of the above the figure of 1,200 specific in the consultation document is a reasonable and realistic expectation of what would be accommodated on the safeguarded site(s). The estimated housing requirement of 92 dwellings quoted in the representation is therefore wrong and without any proper basis.

The chronology of the Site Allocations DPD process as set out in the representation is noted. In all, the Council is satisfied that the correct procedure is being followed recognising that some

of its decisions are not shared by the representations. Based on the Officer's response as a whole, it demonstrates that the preparation of the Site Allocations DPD so far has been in general conformity with the NPPF. Also, it has been demonstrated above that the actions of the LDF Working Group was appropriate. It was also appropriate for Councillor Bowes in his capacity as Ward Member to make representations to the Regulation 18 consultation and participate in discussions of the Working Group. The final decision of the Site Allocations DPD resides with the Council, and as emphasised, the Council is yet to make its decision for the purposes of the Regulation 19 consultation, and the outcome of the consultation will help inform that decision.

**Summary of representation:**

The representation is unhappy about the loss of any Green Belt areas within the borough but would agree to the substitution of the land to the east of Martyrs Lane for the safeguarded sites identified in the Draft Site Allocations DPD (Byfleet, Mayford and Pyrford).

These three sites are pristine Green Belt which should not be considered for development as they have landscape and heritage value. Pyrford in particular is used for recreation by the rest of the Borough and by those from outside it as well. It is according to Woking's own policy "escarpment and rising ground of landscape importance" and your own Consultants said it should not be considered for development.

For a similar reason especially because of its nearness to Horsell Common, does not believe that the New Zealand Golf course should be considered for future development as this would cause a serious decline of natural habitat within the area and road access on to Woodham Lane would cause major traffic problems.

Considers the rest of the Martyrs lane site because the top part of the site has previously been designated for development and includes predeveloped land – the old army camp.

Some of the land is already in public ownership which hopefully allow for more affordable housing.

The site as a whole would allow for the 1300 houses the Borough needs in one consolidated area so that providing infrastructure and amenities would be much easier and cheaper and less disruptive than in the other six sites.

This site has better transport links than the other sites. The A320 allows access to both Woking and the M25 and to major employers such as St Peter's Hospital and Woking town centre.

The other sites in Byfleet and Pyrford which were proposed could not support the additional traffic which their development would cause. The Parvis Road is often gridlocked now and will become more so when Sheer House and the old MOD site are heavily developed in the near future.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

The representation regarding Landscape character and heritage and amenity value are also addressed in the "Regulation 18 Consultation Issues and Matters Topic Paper".

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If

any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on

the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to

manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site, including the Sheer House Development.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Customer Name:** Mr Richard Davis

**Summary of representation:**

The representation considers this is a difficult consultation as all of the seven sites under discussion are in Greenbelt but, on balance, supports substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course. The key reasons are the top part of the site was recently granted planning permission. There is currently no public access to the land. A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc. The northern part of the site is well served with public transport unlike the other six sites. The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency. Much of the northern site has already been used for non-agricultural purposes . Part of the northern site is publicly owned land so the sale would help council tax payers. Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste

safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Alan Stuart

**Summary of representation:**

The use of the proposed site to cover allocation of a significant number of houses 1200, is a sensible approach as the required infrastructure can be put in there to make this feasible. The earlier proposals of trying to add pockets of housing in small rural areas with insufficient roads and infrastructure is flawed. Creating a new housing hub with all that is required, makes sense.

The access and road communication to such a site is good for major routes and commutes.

It is understood that there are no other national or local landscape issues such as there were on previous proposed allocations GB10, GB11 and GB13. It is also understood that much of the proposed land is derelict and some of the area had previously been granted planning permission to McLaren.

The proposed site is nearly twice the size of the six sites it could replace. This will provide for all the properties necessary to fulfil Woking's future Housing and Traveller needs, even further requirements post 2040.

Support the proposal as it makes more sense and is more practical than the previous proposed allocations. Opposed to the other proposed sites.

**Officer Response:**

Support for the Martyrs Lane site and opposed to the other allocated sites is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast

highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of

Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

**Customer Name:** Ms Elizabeth Hewitt

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The development to the north of Woking gives additional housing to the other sites. Development around Martyrs Lane gives an opportunity to redevelop the Sheerwater estate with less disruption to the current residents. The road out to the M25 is in need of improvement and widening to create a stronger corridor to the M25. Surrey County Council has not had a major road development since the Blackwater Valley development. Thus the Martyrs Lane site gives housing, social, economic and transport improvements.

**Officer Response:**

Support noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a

single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Contributor Reference:** 02340/1/001

**Customer Name:** T R Griffiths

**Summary of representation:**

The representation considers this to be a difficult consultation since all seven sites under discussion are in Greenbelt. However, supports the Martyrs Lane site to accommodate 1,024 dwellings in the draft Site Allocation DPD on a single site. Other reasons in support of the designated Martyr's Lane site are the top part of the site includes pre-developed land used as a wartime army camp; and now derelict; this area was also recently granted planning permission for a technology centre. A single site would offer economies of scale with regard to the infrastructure issues arising from the building of more homes. The northern part of the site is well served with public transport unlike the other six sites. The northern part of the site has access onto the A320 with road links to the M25 and Woking town centre. The inevitable disruption would be felt by fewer Woking residents by building on one site rather than six individual sites.

**Officer Response:**

Support noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02343/1/001  
**Customer Name:** Mr Mark Smedley

**Summary of representation:**

The representation main objection is traffic issues that the development will cause in the area. This new development will result in even more traffic on existing roads which are already extremely busy.

**Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;

- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Contributor Reference:** 02344/1/001  
**Customer Name:** Mr Richard Jones

**Summary of representation:**

Strong objection to the possibility of building upon the Pyrford Fields site as a part substitution for building on land east of Martyrs Lane or other sites. The extra housing, and the significantly increased population would overwhelm the existing limited Pyrford village infrastructure.

The road layout is currently only just sufficient for its existing needs – the current Church Hill / Upshot Lane / Pyrford Common Road intersection is already congested and any increase could lead to dangerous road conditions and increased noise.

Parking is already a significant problem around Pyrford Primary School and this is likely to become worse upon completion of the school's current rebuilding. Increased traffic and parking in the local area then effects road efficiency and pedestrian/child safety.

The Infrastructure (limited shops, lack of medical / chemist facilities, poor adaptation for the elderly and disabled) of Pyrford is already inadequate with the current population. Any further increase in population would simply exacerbate an already poor situation.

**Officer Response:**

Objection to building on Pyrford fields is noted.

The Regulation 18 consultation Issues and Matters Topic Paper addresses some of the issues raised in detail, including potential impacts of development on traffic (Section 3, 20, and U); ensuring sufficient infrastructure provision (Section 3); and population growth (Section 23).

The Council is aware of on-street parking issues within the local area, and has recently published its updated Parking Standards SPD which ensures that future development does not adversely impact on highway safety. In addition, at Development Management stage of any planning application, a Transport Assessment would need to demonstrate that any adverse impacts can be sufficiently avoided or mitigated in order to be approved.

**Summary of representation:**

Supports Martyrs Lane as a single site at Martyrs Lane will provide greater economy of scale to address the many infrastructure issues concerning the original six sites and additional community services .It should be possible to build a new Health centre, First School and affordable housing.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the

Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Summary of representation:**

The Martyrs Lane site would be far more appropriate for the new housing development rather than in particular GB10 & GB11. The main reason is the traffic problems to Hook Hill Lane that the new developments would cause. The mornings and evening rush hour on Hook Hill Lane is congested coming over the narrow bridge from Mayford and the A320.

Often there is excessive traffic outside our house and cars travelling at speeds in excess of that which is safe for such a small lane. In the Winter, because of the snow and ice, there are many accidents on the lane. An increase in traffic will occur once the Egley Road development is finished. There has been no specific infrastructure to ameliorate the increase in traffic. Indeed Hook Hill Lane is so narrow that it could not be widened. Traffic also queues regularly over the railway bridge by Saunders Lane making the problem worse.

Strongly considers that it is dangerous for the Council to consider building more houses especially in GB10 that will cause major road problems around Hook Hill Lane. As there is another site in Martyrs Lane that would be more suitable from a traffic infrastructure point of view, choose that site rather than GB10 and GB11.

**Officer Response:**

Support for Martyrs Lane and objection to building on GB10 and GB11 are noted.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Regulation 18 consultation Issues and Matters Topic Paper addresses some of the issues raised in detail, including potential impacts on traffic around Hook Hill Lane (see Sections 3, 20 and U). It also sets out the justification for the release of Green Belt land at Sections 1 and 2.

**Customer Name:** Mr Mike Legg

### **Summary of representation:**

1 LSE A 21st Century Metropolitan Green Belt – LSE A 21st Century Metropolitan Green Belt has done research on what types of land is most important to protect from development. This highlights over 70% of people value land with endangered wildlife, 54% value scenic land, only 40% value quality farmland and 17% value small parcels of land near other developments. This research proves that Woking Borough Council's original site allocations are far more suitable than the proposal to replace these several sites with the land east of Martyrs Lane. The report also suggests that the duty to cooperate will not produce a strategic response to the region's housing needs. The plans to develop Fair Oaks Airport and other developments in Surrey Heath and Runnymede boroughs have direct impact on Woking Borough Council's decision and further indicate that the land east of Martyrs Lane is not suitable.

2 SANGs – The current proposal includes sufficient SANGs capacity for the six sites. Horsell Common Preservation Society has indicated that more SANGs would be required given the size and close proximity of the land east of Martyrs Lane to SSSI. Natural England has clarified the purpose of SANGs and the requirements for their accessibility. Woodland or semi-wooded landscape is a key feature that people appreciate in the sites they visit, particularly those who use the SPA. This is considered to be more attractive than open landscapes or parklands with scattered trees. It is therefore hard to justify how the current proposed areas of SANGs would meet the specified standards set by Natural England. Given comments made by Rural England that visitors favour Woodland or a semi-wooded landscape, why would residents of land east of Martyrs Lane want to go to these SANGs over the SPA.

3 2016 Air Quality Annual Status Report (ASR) – According to the Air Quality Report published by the Council, there is only one area in Knaphill that has been declared an Air Quality Management Area. However the A320 is an area of concern, and monitoring stations have been used near the site at Woodham Lane, Lincoln drive and Church. Woodham Lane already has by far higher levels of NO<sub>2</sub>. The Council has a responsibility to measure and improve air quality and any development needs to be sensitive to air quality. New houses and more cars in an already high air pollution area would increase levels of NO<sub>2</sub> whereas spreading the development over 6 sites would be far less damaging.

4 Transport hotspots – The proposals in the draft Site Allocations DPD does not present significant transport issues. However, Six Cross Roads, Martyrs Lane and Woodham Lane are all shown as major concerns if Martyrs Lane is to be developed. Police data also shows that Woodham Lane is an accident blackspot. None of the six sites will generate traffic concerns and none are accident blackspots. Only the area outside the Pyrford Primary School is highlighted as potential hotspot.

5 Schools – There is no local primary school within walking distance that kids could go to. The closest would be the Marist Catholic School which is already at capacity with no room to expand.

6 Natural Woking Strategy March 2016 – The Council has failed to comply with the requirements of its own Natural Woking Strategy. The Strategy states that the Council will:

o promote high quality environment, biodiversity and sustainable development. It will take measures to protect priority wildlife species population, by reducing habitat fragmentation.

The proposal contradicts the above. It would lead to the loss of woodland and would devastate habitat for many species. The other sites are all less diverse than the land east of Martyrs Lane.

7 Safeguarded plans – The land contains sites that are safeguarded for waste and mineral extraction that would be lost by the proposal. If they are not developed, there will be less development on the site than anticipated, and this would lead to more of the New Zealand Golf Course being developed. The NPPF seeks to protect minerals safeguarded sites.

8 Other development sites – There are other sites that have not been considered which they should. This includes Traditions in Pyrford and Sutton Green, where the current owners are struggling to make money and have approached the Council before about possible development.

9 The Government White Paper on housing – The Housing White Paper has made it clear that local authorities should amend Green Belt boundary only when they can demonstrate that they have examined fully all other reasonable options for meeting development requirements and where land is removed from the Green Belt, local authorities should require the impacts to be offset by compensatory improvements to the environmental quality or accessibility of the remaining Green Belt land. This suggests that the Council would need to do further evidence before removing any land from the Green Belt. So far the Council has not published any evidence of the actual needs of housing from 2027 – 2040. Given the requirements of the White Paper, the Council should stop the preparation of the Site Allocations DPD process to safeguard land for 2027 – 2040 until such time that it can clearly demonstrate a requirement.

10 Peter Brett Associates report – Residents and other Wards are quoting the Peter Brett's report as the reason why Martyrs Lane should be considered. However, the report concludes and recommends that Parcel 2 – the land east of Martyrs Lane is not recommended to be released from the Green Belt.

11 Notes of Council meetings – There have been several meetings about the proposal that highlights a lack of evidence used by councillors to justify the safeguarding of the land east of Martyrs Lane. At no point did the Council give any consideration to the cost involved in this exercise. The LDF Working Group went against the available evidence and the advice of Officers. Given that Councillor Bowes represents the Ward of Pyrford, his actions at the Working Group could be seen as Nimbyism because he presented no credible evidence to justify his proposal to include the land east of Martyrs Lane as alternative safeguarded site. The Working Group should not have been allowed to make its recommendations without evidence. The Working Group should be held accountable for all the cost they have incurred for embarking on this exercise when they have no evidence to do so. The Working Group has misled the Council.

12 Sustainability Appraisal – The representation accepts that the sustainability appraisal is comprehensive but disagrees with some of the scoring in the report. Full details are in the representation but have been taken into account in the Officer's response.

13 Other factors – Some people have claimed that only Parcel A, the northern part of the land is required to build the required number of houses. However, the Hankinson Duckett study has concluded otherwise. Taking into account the flood risk areas, the remaining area can only be developed at a density of 68.7 dph to achieve the required number of dwellings proposed for the site.

14 Runnymede Borough Council objections – The representations by Runnymede Borough Council shows the lack of cooperation between Runnymede Borough Council and Woking Borough Council. The Council needs to cooperate with its neighbouring authorities and have a duty to care for each other and respect each others' views.

**Officer Response:**

1 The Council has not carried out a similar research quoted in the representation to assess the opinions of people about the value they attach to different types of land and therefore cannot endorse or disprove it. Regardless of this, the research does not prove that any of the options considered is better than the other. There is also no evidence to claim that any of the sites is habitat to endangered species. There are no absolute environmental constraints on any of the sites that would prevent their development if the Council decides on its preferred approach to safeguarding. The Council has robust policies in place to make sure that the ecological integrity on any site is not compromised as a result of development. This will be key requirement for the allocation of the site. It is important to emphasise that the Council's decision on the preferred approach to safeguarding will not rest only on the opinion of how different types of land are valued by people. The overall goal of the Council is to identify sites in sustainable locations that would contribute towards achieving sustainable development, and this should be done within the context of the overall spatial strategy for the Borough. Whilst the ecological integrity of the land will always be a material consideration, there are other factors too such as the proximity of the site to key services and facilities, availability and deliverability, risk of flooding, ability to be supported by the necessary infrastructure and many more that needs to be taken into account. The duty to cooperate is a legal duty and the Council has been cooperating with the neighbouring authorities in the preparation of the plan. The Council is satisfied that so far the requirements of the duty to cooperate are being met.

2 The Council has identified sufficient SANG capacity to meet the development needs of the Core Strategy. Horsell Common Preservation Society has made representations as a result of the consultation regarding the provision of SANGs to serve development at Martyrs Lane, and these are addressed separately. In summary, Officers believe that some of the concerns expressed by Horsell Common Preservation Society are misplaced. The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy and the CIL Charging Schedule. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided appropriate contributions are made towards the

provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the land east of Martyrs Lane or the other six sites. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England has submitted representations in response to the consultation. It does not have any objection in principle to the safeguarding of the site subject to the appropriate scale of SANG being provided. Natural England notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. There are a number of examples to draw lessons. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed. The draft Site Allocations DPD proposes to allocate a number of sites for SANGs. Natural England has been consulted and they have not raised any objection in principle. The proposed SANGs would be the requirements for SANG designation. The Council does not accept that the SANG proposals in the draft Site Allocations DPD will not meet development needs and/or achieve their intended objectives.

3 There is no declared air quality management area in the vicinity of the Martyrs Lane site. The Council has robust policies to manage air quality impacts as a result of development. In particular, Policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as policies DM5, DM7 and DM8 of the development Management Policies DPD that would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

4 The Council is fully aware of local concerns about the existing traffic conditions on various transport routes including the Woodham Lane and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generate by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate measures of mitigation to address the adverse impacts of proposed development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including potential development at Martyrs Lane.

It is too simplistic to assume that the development of the six sites will not raise significant transport issues. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. It is important to stress that in this particular case the comparison would be between the development impacts of Martyrs Lane against the cumulative impacts of the six sites.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

A245 Woodham Lane/Sheerwater/Parvis Road;  
A320 Chertsey Road/Guildford Road; and  
B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. The Council is also working in partnership with Surrey Heath and Runnymede Borough Councils and the County Council to quantify the cumulative transport impacts of developments in the three authorities, including developments at Longcross and Fair Oaks if the Martyrs Lane site is safeguarded. The outcome of the study will also help determine the strategic mitigation measures that might be needed to address the cumulative

impacts. The Council accepts that the safeguarding proposals would lead to increase in traffic as demonstrated by its own studies, and mitigation will be needed to address that. It is working with the relevant bodies to determine the appropriate mitigation measures to enable the sustainable delivery of the proposals.

5 The Council will make sure that the development of any safeguarded site is supported by the necessary infrastructure including education provision. The County Council has made representation to confirm that if the Martyrs Lane site is to be developed in the future, the expectation would be that a primary school should be provided on site. If the need is proven, it will be a key requirement for the development to provide a primary school on site. In this regard, the concern raised will fully addressed.

6 It is not envisaged that the development of the site if it is safeguarded would be contrary to the provisions of the Natural Woking Strategy. The site can be developed without compromising the nearby Thames Basin Heaths Special Protection Area. Its safeguarding would not be contrary to Policies NRM6 of the South East Plan and CS8: Thames Basin Heath Special Protection Areas of the Core Strategy if sufficient SANG capacity could be identified to support the development and a contribution is made towards Strategic Access Management and Monitoring. Any mitigation will also take into account the proximity of the site to the designated SPA. The Council can demonstrate that sufficient land will be available to support the development. The Core Strategy has robust policies to make sure that harm to the SPA as a result of development is avoided, and this will apply to any future proposal for development. Policy CS7: Biodiversity and nature conservation is sufficiently robust to protect the ecological integrity of the site. Based on the above, the Council is satisfied that the site could be developed to be in conformity with the Natural Woking Strategy. This representation has also been comprehensively addressed in the Council's response to the Woodham and Horsell Neighbourhood Forum's representations (see Woodham and Horsell Neighbourhood Forum – Issues and Matters Topic Paper).

7 The Council recognises the contribution that the community recycling centre makes towards its objective to maximise recycling in the borough. Its retention on the land as part of the master planning of the site or the provision of a new facility at an enhanced location will be made a key requirement of the allocation of the site if it is allocated. The County Council who owes the facility is supportive of this approach, and will work with the Council to agree the most effective way of retaining the facility. The owner of the land safeguarded for minerals extraction has submitted a representation as part of the Martyrs Lane consultation, and has indicated support for the site to be safeguarded to meet future housing needs of the Council. In this regard, the land could be available for future housing needs subject to further discussion with the County Council on whether or not the site will continue to be needed for their future purposes. At this stage the County Council is unsure about the future need of the site for their purposes until further assessment is undertaken as part of the emerging Surrey Waste Local Plan. Officers will continue to liaise with the County Council on this matter, and are confident that a consensus would be reached.

8 Traditions in Pyrford and Sutton Green Golf Course have not been assessed as part of this process. The land east of Martyrs Lane has been assessed because parts of it had already been assessed as part of the Regulation 18 consultation. Given the changing circumstances at the McLaren site regarding the extant planning permission that could be revoked, there is justification to assess the prospect of a comprehensive development of the entire area.

9 It is important to highlighting that the Housing White Paper does not seek to change the direction of national policy as set out in the NPPF, and neither is it an in-principle new policy. It is only intended to clarify what the existing Green Belt policies mean in practice. Woking Borough Council had always understood the interpretation of the national policy on Green Belt and is already practicing what the White Paper is proposing and as such there will be no need to carry out any further work as suggested by the representation and no purpose will be served by stopping the Site Allocations DPD process. The White Paper itself goes at length to explain that there is no change in policy regarding Green Belt. The White Paper also has suggested compensatory improvements to the environmental quality or accessibility of the remaining Green Belt when Green Belt land is released. The Council has sought further clarification on what this would be in practice in its response to the consultation on the White Paper. Even that, the Council can demonstrate that it can and is meeting this particular requirement.

The NPPF and the White Paper both offers the same strict protection to the Green Belt. The principle that once established the Green Belt boundaries should only be altered in exceptional circumstances through the review of the Local Plan has not changed. The Council has rigorously applied this principle to underpin the preparation of the Core Strategy and the Site Allocations DPD.

A key factor that has mainly been taken into account to justify exceptional circumstances for releasing Green Belt land through the plan making process has been to demonstrate that alternative options have been fully considered, including a thorough assessment of the capacity of the urban area to accommodate projected development needs. The Strategic Housing Land Availability Assessment (SHLAA) and the Employment Land Review are evidence to demonstrate the assessment of brownfield sites. Paragraph 159 of the NPPF requires Local Planning Authorities to prepare as evidence 'a strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period'. Generally and specifically in Woking, SHLAAs has mainly focused on urban sites, predominantly previously developed land and how their uses can be maximised.

The Core Strategy takes this principle fully on board. In particular, Policy CS1: A spatial strategy for Woking Borough of the Core Strategy and its reasoned justification seeks to maximise the use of brownfield land. The high indicative densities set out in Policy CS10: Housing provision and distribution of the Core Strategy also reflects this principle. There are therefore clear and strong policy framework to prioritise and support development on previously developed land at high densities subject to character and environmental considerations.

Planning decisions relating to development proposals in Woking Town Centre also rigorously applies this principle. The Victoria Square and Goldsworth Road approved proposals are good examples. The Victoria Square proposal is about 660dph. The proposed indicative densities for the proposals in the draft Site Allocations DPD also seeks to maximise the efficient use of urban land. The Sheerwater scheme is a classic example of how the Council is using urban regeneration to improve living and environmental conditions of the area as suggested in the White Paper. On the basis of this, the Council has done more than the White Paper requires, and does not need to do any further work in response to the White Paper.

The NPPF is clear about the need and the reasons for safeguarding sites to ensure the enduring permanence of the Green Belt boundary beyond the plan period. It would be unreasonable within this policy context to accurately predict the exact future housing requirement. Right, the projections are based on a thorough assessment of historical data and intelligent assumptions of future provision of housing. The assumptions are credible, acknowledging that an exact housing requirement could only be determined as part of the review of the Core Strategy, an up to date evidence at the time and appropriate scrutiny at an examination. The 2027 – 2040 housing provision of 1,200 dwellings is on the basis that the Council will continue to provide 292 dwellings per year.

For the 13 year period, this is estimated to be 3,796 dwellings. It is assumed that lower density development in the Green Belt of about 30dph will continue into the future. An intelligent assumption has been made that the urban area will continue to make a significant contribution towards housing supply during that period in line with the overall spatial strategy. The estimated projection is that the urban area will provide about 50% of the total supply of housing during that period. A marginal allowance has been made for windfall development, which will continue to come forward during that time. Historical estimates over 10 years suggest that about 40 dwellings per year will be delivered through this source. On the basis of the above the figure of 1,200 specified in the consultation document for which land is sought is a reasonable and realistic expectation of what would be accommodated on the safeguarded site(s).

10 The Council is aware that the Peter Brett's report did not recommend that Parcel 2 be released from the Green Belt. This is a material consideration that the Council will take into account when considering the representations to the consultation.

11 The Council is transparent about the conduct of its meetings and has published the Officers' advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agreed that the consultation on the land east of Martyrs Lane was necessary and the representations that are received during the consultation will be source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of Officers, it is clear from the Minutes of the meetings that they carefully considered the report before reaching their recommendations. The Working Group also had all the necessary evidence before them to inform their recommendations. Appropriate procedure is followed in this regard. The Council has not yet made any decision on the Officers report or the recommendations of the Working Group. It has rightly reserved its right and authority to do so after careful consideration of the

representations received during the Martyrs Lane consultation. The request for further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and to make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided reasons for their recommendations. Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD (Regulation 19). Councillor Bowes has also been transparent about his proposed amendment at the Working Group. There is nothing improper about his conduct in this regard. He provided clear reasons for his amendment and it will be up to the Council to judge whether or not the recommendations of the Working Group are rational. The fact Councillor Bowes is a Ward Councillor in a ward that Green Belt sites are proposed to be released should not be a reason to prevent him from participating in discussions about the Site Allocations DPD in an open and transparent manner, in particular, as the Working Group is only a scrutiny and an advisory group.

12 It is noted that the representation has come to different conclusions on some of the scorings in the sustainability appraisal. It is reasonable to expect that this could happen. The Council has used consistent and clear assumptions to inform the scoring and are satisfied of the scores.

13 The geographical extent of the land east of Martyrs Lane is defined by a Map and it includes the golf course. The Council had not specified which parts of the land will be used for what purpose. This is a decision that will broadly be informed by the representations to the consultation and in detail through a potential masterplanning of the land if it is safeguarded. The consultation document was also clear that the land should be capable of delivering at least 1,200 homes. This is necessary to justify it as an alternative to the six sites it seeks to replace. The Hankinson Duckett report has recommended that the development of Parcel A (north of the land) will lead to an isolated development in the Green Belt. The Council will take the information into account to inform its final decisions.

14 Runnymede Borough Council has made a separate representation regarding the duty to cooperate, which has been fully addressed.

Officers strongly disagree with their assertion that the Council has not met its requirements for the duty to cooperate by not consulting Runnymede and the neighbouring authorities prior to the consultation. The claim is factually incorrect. The Council resolved to consult on the possibility of substituting the land east of Martyrs Lane for the six original safeguarded sites at its meeting on 20 October 2016. Runnymede Borough Council and the other neighbouring authorities were notified of the Council's decision soon after that on 24 October 2016. The Council had not previously considered this matter. The proposal was referred to Council for consideration by the LDF Working Group and the 20 October 2016 meeting was the first time the Council had considered the matter.

Runnymede Borough Council was once again invited on 28 October 2016 to send the Council any informal representations they may have and for them to be taken into account before the

proposal was formally published for consultation. They were also offered an opportunity to meet to discuss the details of the proposal and the nature of the consultation. The Council met them to do so. The consultation started on 6 January 2017 for a period of six weeks, and they were formally consulted. The Council is satisfied that it has gone beyond the requirements of the duty to cooperate to reach out to the neighbouring authorities and to listen to any concerns they may have, and it is not correct to suggest that Runnymede was not adequately consulted. The Council understands that the duty to cooperate is a continuous process and has subsequently been engaging with Runnymede and Surrey Heath Borough Councils after the consultation period to establish a framework for joint working in the future. The above clearly demonstrates that the Council has positively engaged with Runnymede regarding this particular issue.

**Summary of representation:**

Objects strongly to the proposed development on the fields in Pyrford as its loss will impact current and future generations.

Pyrford has seen an increase in its housing over the years and this has put a great deal of pressure on such services as the local school, the Medical Centre in West Byfleet and local roads. To develop the Pyrford Fields would add greatly to all those pressures when there is no mention of improving them alongside the housing proposals.

Green Belt Land is a treasured possession and should be preserved including all the sites within the DPD, other alternatives should be looked at.

Supports the possible substitution of the Martyrs Lane site as a new community would develop and take on a character of its own with purpose built facilities like a new school, medical facilities, local shops etc., with the possibility of affordable housing.

The site, in part, has already been used for non-agricultural purposes, for wartime activities but now almost derelict and one part was granted planning permission for a technology centre so already considered for development.

To build on one site, a portion of which is already publicly owned, would help with the financial implications of providing services that would be concentrated on one site

This site, in part is already served by public transport and would have easy access to A320 that feeds Woking and the M25 when new roads are built.

This road network would in turn be useful to anyone employed or seeking employment at such places as St Peter's Hospital, The Animal and Plant Health Agency, Brooklands site and within Woking itself.

One complete new housing development, with a new infrastructure and amenities would cause far less disruption within the Borough and would save valuable Green Belt Land for all residents, now and in the future.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and

still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst

this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site.

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper'. The issue of brown field sites, landscape, medical facilities and infrastructure have also been addressed in the 'the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040

The Martyrs Lane site is on Green Belt land, some of which has been previously developed – which is not true of the other proposed sites.

The A245 through West Byfleet & over the M25 bridge has virtually no capacity left, especially when other new development in the area is taken into account, in particular the Broadoaks development. The East side of Woking and routes to West Byfleet and Woking stations and Woking Town Centre will become gridlocked should the proposed development of Wisley Airfield proceed. On the contrary, the Martyrs Lane site provides direct access to a major trunk route, the A320, facilitating access to Woking Town Centre and the M25/Heathrow Airport. The A320 also provides bus and cycle routes and opportunities to encourage sustainable modes of transport.

one site for the future housing needs of Woking would probably mean "economies of scale" and would help to find solutions to many of the infrastructure concerns.

Amenity value, Green Belt land in Pyrford is accessible and actively used by walkers, runners, cyclists and others from all across the Borough.

The Heritage features of the area which incorporates the two Pyrford fields includes the historic wooded grounds of Pyrford Court which are grade II listed, Pyrford Village Conservation Area, Pyrford Common, designated as a Site of Nature Conservation Interest, Aviary Road Conservation Area and the network of ancient footpaths. The two fields in Pyrford are integral to the heritage setting of the area. These considerations do not apply to the Martyrs Lane site.

Pyrford is protected by Woking Core Strategy policy CS24 as 'escarpment and rising ground of landscape importance'.

Pyrford's fields have been farmed for centuries and include good quality agricultural land. The agricultural fields make an important contribution to the rural character of the area and provide an important setting for the southern entrance to the town.

The Martyrs Lane site provides proximity to major local Employers in particular, St Peter's and Runnymede hospitals, the Animal and Plant Health Agency and McLaren.

## Officer Response:

Support for the Martyrs Lane site is noted.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served

by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

If the Council were to decide to safeguard this site or the other six sites, its development will take into account any development proposals in the vicinity of the site.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The issue of landscape character and amenity have been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This site in Pyrford is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

## Officer Response:

Support for the Martyrs Lane site is noted.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served

by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

If the Council were to decide to safeguard this site or the other six sites, its development will take into account any development proposals in the vicinity of the site.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

The issue of landscape character and amenity have been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This site in Pyrford is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

**Contributor Reference:** 02351/1/001  
**Customer Name:** Mrs Marie Stuart

**Summary of representation:**

This proposed site is situated in an area with good transport links and in the proximity of nearby major employers. The road serving the area is an established major route between Woking and the M25 and other major roads in the area.

The site is large enough to fulfil all the future housing needs and to allow for the measured and proportional development of the necessary infrastructure to support such a project. This is preferable to the piecemeal development of scattered areas which have limited infrastructures which struggle to cope with their existing populations. Roads with pinch points and single carriageways cannot cope with huge increases in traffic flow. Water provisions and sewage capacity, and provision of gas and electricity supplies would require extensive work to provide for the development far in excess of the current populations in the earlier proposed sites.

The Martyrs Lane site does not have Landscape designation and no Escarpment and Rising Ground Landscape Importance issues such as those faced in GB10, GB11 and GB13. Also part of the land on this proposed site has been previously earmarked for development.

In considering a large site such as this, it is possible to accommodate affordable housing requirements and targets for other groups including the elderly and specialist vulnerable groups. The proximity to a major hospital may also be of value in these latter groups. With respect to travellers pitches, all the current sites are focused towards the south of Woking. The Martyrs Lane site would offer a choice of a different part of the borough in which to live with a sustainable purpose built infrastructure situated, as required, so as not to impact on the visual amenity and character of the area.

Support the proposals for the development of the Martyrs Lane site.

**Officer Response:**

Support for the development of the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course

and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

In terms of specialist residential accommodation, it is not known at this stage which type and nature of development will be allocated this depends on the site allocation DPD and Core Strategy.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

**Contributor Reference:** 02277/1/001  
**Customer Name:** Surrey Wildlife Trust

**Summary of representation:**

Please consider these representations as those of the Surrey Wildlife Trust, and also submitted on behalf the Surrey Nature Partnership (SNP).

The site is in a particularly sensitive location for the purpose of biodiversity conservation. Some 0.3 km to the west is the Horsell Common Site of Special Scientific Interest (SSSI), part of the Thames Basin Heaths Special Protection Area (SPA). These are statutory protected site designations and we would refer you to the legal regulatory agency, Natural England, on this matter. Although accessible to the public, the biodiversity interest of the SSSI/SPA remains highly vulnerable to disturbance by inconsiderate visitors and consequently this has to be carefully managed. It is our opinion that the potential increase in such disturbance resulting from a nearby, significantly large new housing development would be very difficult to accommodate without detriment to the biodiversity interest. Immediately adjacent to the proposed development site are two non-statutory Sites of Nature Conservation Importance (SNCI), identified under the adopted procedures for Surrey<sup>1</sup>. To the west is the New Zealand Golf Course SNCI, which includes remnants of Lowland heathland and acid grassland habitats of similar value to those within the SSSI. To the north-east is the Birch Wood & Hoyt Wood SNCI, both featuring ancient Wet woodland habitat, falling within Runnymede Borough. All of these protected sites, together with the majority of the development site, fall within the Woking Heaths TBH05 Biodiversity Opportunity Area (BOA), while a smaller area in the north falls within the R04 River Wey & tributaries BOA.

National Planning Policy Framework paragraph 117 requires planning policy (and hence Local Plan-making) to consider biodiversity conservation at a landscape-scale; recognising the hierarchy of international, national and locally designated sites of biodiversity importance as components of 'local ecological networks', which would also include any wildlife corridors and 'stepping stones' that connect these sites, as well as areas identified by local (including Nature) partnerships for habitat restoration or creation (ie. as within BOAs). An overarching policy aim of utmost priority within BOAs is to avoid impacting existing or potentially improved habitat connectivity between their constituent protected biodiversity sites. A proposal for the extensive development of land between Horsell Common SSSI and the two SNCIs would appear to be entirely inconsistent with this aim. Something on a more modest scale could be possible, and may indeed also seek to enhance habitat connectivity whilst meeting other of the specific BOA objectives of both TBH05 and R04. These can be viewed in the SNP document Biodiversity Opportunity Areas: the basis for realising Surrey's ecological network (December 2015).

In conclusion, it is likely that the Land east of Martyrs Lane site will be found unable to support a wholly sustainable development at the scale currently being proposed (ie. that would avoid detrimental impacts on the natural environment).

## Officer Response:

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The Council will make it an essential requirement for the site to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy, Policy DM1: Green Infrastructure Opportunities and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

The nature and type of some of the surveys that will be required to accompany any development proposals will be undertaken at the development management stage. The land will only be released for development as part of the review of the Core Strategy and or the Site Allocations DPD, and that will be the most appropriate time to set out the key requirements for any development to be acceptable. The surveys will make sure that features of environmental, biodiversity and amenity significance are fully assessed and protected from development, where necessary.

Environmental organisations such as yourself, Natural England, Environment Agency and Woodlands Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential integrity of the land can be protected.

**Contributor Reference:** 02304/1/001  
**Customer Name:** Mr Colin Southey

**Summary of representation:**

The representation is opposed to building on the Green Belt, should protect/avoid development on Green Belt so that it remains a green lung for all our health. Brownfield and all other non Green Belt option need to be fully explored and incentivised to add housing towards the targets aimed for.

**Officer Response:**

The justification for the release of Green Belt land to meet future development needs has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper, particularly in Sections 1 and 2. The paper also sets out how the Council has considered and individually assessed brownfield sites across the Borough as a priority for meeting development needs – see Section 11.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. The overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02274/1/001  
**Customer Name:** Mrs Margaret B Walker

**Summary of representation:**

The representations considers that it would be better to use the large area of semi-derelict and pre-developed land to the east and north of Martyrs Lane, rather than removing 6 other sites from the Green Belt and in particular the fields in Pyrford, for the following reasons,

Martyrs Lane land already has planning permission to build a technology centre, which McLarens have decided not to build and another area was a WW II army camp.

There is currently no public access to the land and some is already in public ownership.

In contrast the Pyrford Upshot Lane green belt fields are an important rural landscape feature on the escarpment. They form a critical environmental corridor leading to the Conservation Area and comprise the largest area of heritage pristine green belt. There are public paths on this site, with views of the North Downs, which is popular and used by residents and visitors.

Developing just one site would yield many economies of scale, in providing water, sewerage, gas electricity, access, reduce some traffic, by building schools, shops, leisure and health facilities, rather than further overloading the existing communities overstretched facilities.

There is access to good public transport from the Martyrs Lane site, which is not the case in Pyrford and being near the Six Crossroads roundabout there is good access to main roads in all directions, including the A320 and the M25.

The road network makes for easier access to local employment.

Development of (approx. 1000 homes) is almost certain in West Byfleet and Pyrford before the proposed Green Belt development which will have a significant effect on local roads and already overstretched services and this should be taken into account.

When an attempt was made to remove the Upshot Lane fields from the Green Belt in 1988-1990 the WBC Planning Officer recommended against the proposal. It went to a public enquiry and Mr Noble, the Inspector concerned, stated that this Pyrford area of land was of vital importance in preventing Woking and Guildford becoming a mega-town and should never be removed from the Green Belt.

This will cause least disruption and expense to the borough, least detriment to the continuity of the Green Belt and provide the greatest potential for a viable, satisfactory development.

## Officer Response:

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper' with particular reference to section 1.0.

Regarding the representation on landscape, it is accepted that the Martyrs Lane site does not contain landscape constraints such as those on the escarpment, but it does in fact contain other development constraints, such as areas of Ancient Woodland. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

The Council has carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The

Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

If the Council were to decide to safeguard this site or any of the six site, its development will take into account any development proposals in the vicinity of the site, including the developments in West Byfleet and Pyrford.

**Customer Name:** Miss Pippa Ballam

**Summary of representation:**

Lack of transport infrastructure to carry thousands of new homes. Development is based on Government target. There are much better-served areas.

**Officer Response:**

The justification for the release of Green Belt land for development, infrastructure provision and identified the local housing need have been fully addressed as set out in the 'Regulation 18 Consultation Key Issues and Matters Topic Paper, with particular reference to section 1.0, 3.0 and 8.0.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The County Council has also carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02278/1/001

**Customer Name:** Mr And Mrs John And Rosey Foster

**Summary of representation:**

Supports a single site for housing development on land to the east of Martyrs Lane. It has a great number of benefits that outweigh six separate sites or the use of fields at Upshot Lane in Pyrford. These are it is well served with public transport, currently there is no public access to the land, the northern site is publicly owned and has been used for non-agricultural purposes, it is near big employers, road access is good, there would be economies of scale over multiple sites and less impact on existing residents of Woking.

**Officer Response:**

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02840/2/001  
**Customer Name:** Ms Jenny Fowler

**Summary of representation:**

Supports development at Martyrs Lane and reject the Pyrford Fields plans as adopting a single site will enable suitable infrastructure of school, health centre and affordable housing can all be accommodated on this one site. Choosing several other sites would burden the current over-subscribed facilities of schools and health centre. Affordable housing on the Martyrs Lane development, but not necessarily in Pyrford or the other proposed sites.

The Martyrs Lane site seems under-used at present and seems an ideal place to build a really comprehensive development offering the new residents the facilities they will need.

Also there is far more traffic access in the Martyrs Lane area than in Pyrford and West Byfleet. West Byfleet has to contend with the additional traffic that the Parvis Road development will add.

Martyrs Lane makes sense, especially without using the New Zealand Golf Club lane and there is plenty of room there.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site or any of the six sites, its development will take into account any development proposals in the vicinity of the site.

The Council is unclear what the representation was stating regarding 'without using the New Zealand Golf Club Lane'. However, the site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

**Contributor Reference:** 02301/1/001

**Customer Name:** Ms Jane Bond

**Summary of representation:**

The representation disagrees strongly with Woking Borough Council's proposal to allocate Green Belt land for development. Green Belt land should not be considered for housing. Green Belt land was originally designated as a green space to act as a 'lung' between urban developments and to prevent 'urban sprawl'. Disappointed that Woking Borough council are putting forward any plans to encroach on such land.

It is not a question of choosing one Green Belt site over another; none should be used. The council should Look at using existing land within brownfield and urban sites. The Council is taking the easy option by opting for Green Belt land.

The consultation documentation mentions previously designated land for building; these areas should be used in preference to Green Belt land. As mentioned in the proposals, there are existing urban sites available for housing and plans should be in place to maximise the space available on these sites to accommodate the number of dwellings required.

There should not be a need for a 'public consultation' to even consider using Green Belt land when Green Belt land has to be protected at all costs.

**Officer Response:**

The justification for the release of Green Belt land for development to meet future housing needs is set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper, in Sections 1 and 2. This also sets out in detail how brownfield sites have been considered and individually assessed as part of the Site Allocations DPD process, under Section 11. This assessment included around 125 sites, the results of which are set out in the Sustainability Appraisal report.

The Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. The overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

As part of the plan-making process, the Council is required by the Town and Country Planning (Local Planning) (England) regulation 2012 to consult at both the Regulation 18 and Regulation 19 stage. The Council has also undertaken an additional round of public consultation to inform its preferred safeguarding option for the purposes of the Regulation 19 consultation. The decision to consult is therefore proscribed by regulations, and is an important part of the plan-making process.

**Summary of representation:**

Understands that more houses are required and considering the options, supports the Martyrs Lane proposal excluding the New Zealand Golf Course. Infrastructure could be provided on the site easily.

Any houses should be affordable and not luxury houses. Young couples, single people and retired people need homes.

Strongly object to development on Upshot Lane. Green Belt is needed. Also the infrastructure is at capacity including roads, the school and health centre. The roads are very narrow and congested.

Martyrs Lane could provide new infrastructure as part of the development.

**Officer Response:**

Support for the Martyrs Lane proposal and objection to development in Pyrford is noted.

Whilst the representation suggests excluding the New Zealand Golf Course from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary

infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy, in particular Policy CS10: Housing provision and distribution and Policy CS11: Housing mix, specifically requires new residential development to provide a mix of housing types and sizes to ensure that it addresses the identified local housing need. In addition, Policy CS12: Affordable housing sets out the amount of affordable housing that should be provided on any of the proposed sites as part of any development scheme. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full.

It should also be noted that Core Strategy Policy CS13: Older people and vulnerable groups supports the principle of specialist accommodation including older persons housing. The exact type and nature of development on either of the proposed safeguarding options will be considered in detail as part of a future review of the Core Strategy and or Site Allocations DPD.

Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The representation regarding reasons against development in Pyrford, namely the impact on infrastructure, has been addressed in Section 3.0 of the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02331/1/001  
**Customer Name:** Ms Carole Gale

**Summary of representation:**

Not able to accept the terms of this current consultation because the six sites have not been 'safeguarded' as implied by this consultation. They were proposed in the Regulation 18 consultation, but objections have not been answered. The choice is therefore a false choice which should not have been presented.

Object to the two sites in Pyrford being included in this consultation for the following reasons:

The Green Belt boundary review included the Pyrford sites in Parcel 9. It concluded that the fields serve two critical Green Belt purposes – firstly in restricting sprawl and secondly in safeguarding the countryside from encroachment. The report explains that by critical it means that the continued inclusion of this parcel within the Green Belt it is of paramount importance. It is the highest category of defence possible. For these reasons the parcel is identified by the report as having very low suitability as an area of search based on the assessment of greenbelt purposes.

The report also stated that the land is considered to be in the category of Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The exact agricultural quality of the land has not been established.

The parcel is identified as within or adjacent to 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. The escarpment is considered to be a key landscape feature in the Borough and this is the principle reason that the report considers there to be a major environmental constraint on developing the Parcel.

The rural character of the area would be harmed. The Green Belt boundary review concluded that Parcel 9 has a rural character which ranged from having no capacity to change to low capacity to change. The Parcel falls into the highest categories of constraint to development. Since the report Surrey County Council has conducted a Landscape Character Assessment which also concludes that the area is rural in character and that the fields are important in contributing to this feel.

The councils own sustainability appraisal states that both fields score double negatively in the category 'Conserve and enhance and where appropriate make accessible for enjoyment the natural, historic and cultural assets and landscapes of Woking.'

The decision to put forward the fields for removal from the Green Belt was taken on grounds of availability alone. GB13 wasn't recommended for removal by the Brett report and no subsequent evidence was produced to justify its inclusion. Ashley Bowes has stated:

'I am of the view that the draft DPD is unsound in its current form, in that contrary to s.19(2)(a) Planning and Compulsory Purchase Act 2004, proposed site allocations GB12 and GB13 are not

in accordance with national policy within the NPPF. In particular, the necessary "exceptional circumstances" to justify release of those sites from the Green Belt is not supported by the conclusions of the evidence upon which the Council rely. It is clear the evidence does not support the choice of the two fields.

The choice of the Pyrford fields is based on inadequate evidence and cannot be justified.

The council has marked all previous objections as 'No further modification is proposed as a result of this representation' and given inadequate reasons for doing this. Attached a table showing some of the objections and why the council hasn't answered them satisfactorily.

Reiterate all of the objections submitted to the Regulation 18 consultation, which include concerns about infrastructure including road traffic, affordability, biodiversity, saving agricultural land, air pollution, water and sewerage

The two fields, as noted by the Green Belt Review, are not near a doctor's surgery , secondary school or train station. The primary school and nurseries are all oversubscribed.

Changes to the roads in the Pyrford area are not possible without harming the character of the area. The narrow roads are built on ancient trackways and contribute to the rural character of the area. The B382 Old Woking Road is already a severely congested road and it is uncertain what will be the impact of the enlarged International School (200 to 1100 pupils), development at Sheer House and Broadoaks in West Byfleet, plus possible development at West Hall and Sheerwater. The B367 which runs through the centre of Pyrford is already severely congested during the school run period. The Pyrford Neighbourhood Plan has identified the verges along this route as playing a significant role in contributing to the character of the village and therefore widening of the road is not an option. Pyrford is already under threat from a huge traffic increase from the proposed developments at Garlicks Arch near Burnt Common and the Former Wisley Airfield. The impact of these and other proposed developments will undoubtedly bring further traffic from Ripley via Newark Lane. No traffic studies have been conducted into the effect of all these developments.

The government Housing White Paper recommends higher density building. This is inappropriate in an area surrounded by Conservation Areas. The genuine need for smaller properties would be better met elsewhere.

The footpaths and bridleways in the area are recognised as being of special importance and are used for recreational purposes. The footpaths are ancient and afford attractive views, including uninterrupted views of the North Downs. The Heritage setting of Pyrford Village and the character of the area as enjoyed from the footpaths will be harmed by development of the two fields.

Particularly upset by your response to this:

During the preparation of the Site Allocations DPD the Council consulted with Surrey Wildlife Trust and Natural England to discover the biodiversity value of each of the proposed sites.

Overall the preferred sites did not raise any objection from Surrey Wildlife Trust or Natural England based on existing biodiversity features that could not be addressed.

Will pursue this matter with Surrey Wildlife Trust. There will undoubtedly be a loss of biodiversity regarding the birds and mammals which migrate between Pyrford Common and the farmland. Has spent many hours observing the farmland birds using this area and it is impossible to mitigate this loss.

The south east is an area of high water stress and sewerage systems in the area are considered adequate only to 2026. There has been no serious exploration as to whether the already creaking water supply and sewerage systems could cope with the increased demand. There are known sewerage problems in this area and exacerbating this will affect the water quality of the River Wey.

Background air quality is not considered and poor air quality results in many thousands of deaths every year. The impact of increased traffic on air quality must be taken more seriously.

Objects to the Safeguarding of Green Belt Land.

The government White Paper on housing states that 'authorities should amend Green Belt boundaries only when they can demonstrate that they have examined fully all other reasonable options for meeting their identified development requirements.'

The Council has identified Green Belt land which is capable of delivering at least 900 dwellings during the current plan period, well over the 550 homes targeted in the Core Strategy. The intention to revise boundaries such that a further 1,000 units could be delivered in the Green Belt is a decision which cannot be justified.

The eleventh hour inclusion of land to the east of Martyrs Lane as a potential safeguarding site proves that safeguarding is an inadequate method of producing enduring Green Belt boundaries. Safeguarding results in the blighting of Green Belt land. There is also a great danger that because of the Duty To Cooperate, that these sites will be brought forward to satisfy housing need in other areas. This contradicts the government's commitment to protect the Green Belt, reaffirmed in the Housing White Paper.

Regarding the Council's response to the representors Regulation 18 consultation representation:

Pyrford land is used for agricultural purposes – An enquiry to Natural England, which is responsible for classifying agricultural land stated that the data they have 'does not show the breakdown of Grade 3 into Subgrades 3a and 3b' 'Consequently, it is not suitable for site specific assessments, for which a more detailed field survey may be needed.' GBBR 3.3.20 states The data relating to Agricultural Land Classification has been obtained from Natural England. At this strategic level, there has been no differentiation available from their data on whether land is classified as 3a or 3b.

It is not possible to state that 'this particular site is of low soil quality.' The NPPF paragraph 112 states that 'Local planning authorities should take into account the economic and other benefits of the best and most versatile agricultural land.' This it considers to be 'Land in grades 1, 2 and 3a of the Agricultural Land Classification.' Without a more detailed survey it is not possible to dismiss the possibility that the two fields should be protected for their agricultural value.

Amenity and recreational value of the land and the suitability of the site for development as set out in the Green Belt boundary review –

If you remove Green Belt land which is serving critical green belt purposes, as demonstrated by the GBBR, then of course you will undermine its purpose and integrity. The available evidence shows that the sites are far from being the most sustainable when compared to other alternatives.

Here are the results of the sustainability appraisal:

- o accessibility to services and facilities – scores negatively  
not near to town centre, secondary school, GP
- o conserving and enhancing biodiversity – Scores negatively
- o Conserve and enhance and where appropriate make accessible for enjoyment the natural, historic and cultural assets and landscapes of Woking – scores double negatively

It is irrelevant to talk about how much land is being released in terms of percentages. Green Belt land serving clear Green Belt purposes, which is also unsustainable, should not be released full stop.

The Topic Paper section 7.0 supports the argument that the two fields should not be removed from the Green Belt. The Topic Paper considers the Brett report to be 'robust and well considered.' The Brett report considers Parcel 9 (GB12 and GB13) to have a major environmental constraint because of the escarpment and rising ground of landscape importance. It considers the landscape to have no or little capacity for change. In addition the Surrey Landscape Character Assessment (page 48) makes it clear that the fields contribute to the rural feel of the area. On all the evidence the fields are extremely important to the character of the area.

The LDA response can not be found so unclear whether it has been taken into account.

The NPPF expects Green Belt to be retained and allocation of the site goes against CS1 and the Green Belt boundary review – The sustainability report does not support the selection of GB13. The Council ignored all the evidence to include this site, including the Landscape Character Assessment. GB13 is adjacent to the Pyrford escarpment, a key landscape feature in the Borough protected by Core Strategy Policy CS24, it was assessed as having a strong unspoilt rural character and having no or low capacity to change.

GB13 was not recommended in the Green Belt boundary review and goes against advice from DCLG that unmet housing need (including for traveller sites) is unlikely to outweigh the harm to the Green Belt and other harm to constitute the "very special circumstances" justifying inappropriate development on a site within the Green Belt.

1.12 The focus for consideration for the DPD should be about ensuring that the proposed allocations and or any other preferred alternatives are the most sustainable when compared against other reasonable alternatives. The site is nowhere near the most sustainable.

1.13 The Council is satisfied that the proposals in the Site Allocations DPD achieve the above objective. The Site Allocations DPD is informed by robust evidence, including, the Green Belt boundary review...The views of the general public has also been considered and taken into account. The Green Belt Review is not robust evidence and the views of the general public have not been taken into account.

2.2 it is very unlikely that another Green Belt boundary review will produce a different outcome to the Peter Brett Green Belt boundary review used to inform the Site Allocations DPD. It should produce another outcome if done without placing total reliance on availability.

17.1 It is important to emphasise that the Green Belt boundary review is only one of a number of evidence base studies that has been used to inform the DPD. Other evidence base studies such as the Sustainability Appraisal Report, Transport Assessment have also played a key role in informing the DPD. The other studies do not support selection of this site.

All the above show the weakness of the Topic Paper response to the inclusion of GB13 – all the evidence clearly shows that it is not a suitable site for removal from the Green Belt. Availability alone is not a sufficient reason.

GB12 is adjacent to the Escarpment and has unique landscape character – GB12 is adjacent to the Pyrford escarpment, a key landscape feature in the Borough protected by Core Strategy Policy CS24. The Landscape Character Assessment assessed the parcel as having a strong unspoilt rural character and having no or low capacity to change.

GB13 has a unique landscape character and publically accessible. GB13 is adjacent to the Pyrford escarpment, a key landscape feature in the Borough protected by Core Strategy Policy CS24. The Landscape Character Assessment described the parcel as having a strong unspoilt rural character and having no or low capacity to change. The Surrey Landscape Character Assessment considers the fields in the area to contribute to the rural character of the area. This is an interconnected landscape where the fields provide a setting for the many Heritage features in the area, they cannot be considered in isolation. There is an ancient public right of way running alongside GB13 which is an essential component of the connectivity in this rural landscape. It shows a total disregard for the unique nature of this area to suggest that a pedestrian and cycle way through a large scale housing development would be an asset.

The Sustainability Appraisal recognised the importance of the heritage and landscape of this site:

Conserve and enhance and where appropriate make accessible for enjoyment the natural, historic and cultural assets and landscapes of Woking – scores double negatively The land has not been assessed in detail so no statement can be made about the agricultural quality.

The Borough has not followed a correct procedure in arriving at the field GB12 to be safeguarded for future development between 2027 and 2040 – The Green Belt Review selects parcel 9 but provides no evidence to support this decision as the decision is based on

availability. All the other evidence does not support this decision either. Here are the results of the Sustainability Appraisal for example:

- o accessibility to services and facilities – scores negatively  
not near to town centre, secondary school, GP
- o conserving and enhancing biodiversity – Scores negatively
- o Conserve and enhance and where appropriate make accessible for enjoyment the natural, historic and cultural assets and landscapes of Woking – scores double negatively

The LDA Design submission and response can not be located online.

The Borough has not followed a correct procedure in arriving at the field GB13 to be safeguarded for future development between 2027 and 2040 – This answer is cut and pasted, resulting in mistakes such as referring to GB12 when it should be addressing GB13.

#### **Officer Response:**

The preparation of the Site Allocations DPD is the formal process that will ultimately confirm the status of each of the sites designated within it, including those that are earmarked for safeguarding. The sites that have been identified in the Regulation 18 version are those that the Council had proposed for the purposes of safeguarding if it is examined and approved. The Land to the east of Martyrs Lane Consultation Document is careful to use the term 'proposed sites' and the introduction to the draft Site Allocations DPD also makes it clear that the sites are proposed at this stage.

The Council published the draft Site Allocations DPD for public consultation between 18th June and 31st July 2015. The publication of the draft document was in accordance with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The document clearly identified a number of sites that would be safeguarded for future development needs between 2027 and 2040. To clarify, the draft Site Allocations DPD safeguarded the following sites for future development needs:

GB4: Land south of High Road, Byfleet

GB5: Land to the south of Murray's Lane, Byfleet

GB9: Woking Garden Centre, Egley Road, Mayford

GB10: Land to the north east of Saunders Lane, between Saunders Lane and Hook Hill Lane, Mayford

GB11: Land to the north west of Saunders Lane, Mayford

GB12: Land rear of 79–95 Lovelace Drive, Teggs Lane, Pyrford

GB13: Land east of Upshot Lane and south of Aviary Road, Pyrford

As well as clearly identifying specific sites for safeguarding, Paragraph 216 of the National Planning Policy Framework (NPPF) states that at this stage of the process, the document can be afforded very limited weight in the determination of planning applications. Therefore despite not being an adopted Council document, it does form part of the emerging Development Plan for Woking Borough.

Based on the above, whilst the Site Allocations DPD has not been adopted by the Council at this stage it is clear that the formal plan making process has started and that the Martyrs Lane consultation document was correct in identifying the original sites as 'safeguarded sites in the draft Site Allocations DPD'.

Objection to the possible safeguarding of Green Belt land in Pyrford for future development needs (referred to as GB12 and GB13) is noted.

Where the representation has repeated comments, for example on matters of landscape or agricultural land classification, officers have only responded once to avoid repetition.

Regarding the representation on the land availability, availability of land is a significant material consideration for the Council to take into account in deciding its preferred approach to safeguarding for the purposes of the Regulation 19 consultation. Paragraph 182 of the NPPF deals with examination of local plans and it requires the Council to only submit a plan for examination which it considers sound. Amongst other things, to be sound, the plan:

- o Should be deliverable over its period;
- o Should be the most appropriate strategy when compared against the reasonable alternatives, based on proportionate evidence.

Footnote 11 of the NPPF provides clarity on what a deliverable site is. To be considered deliverable, sites should be available now, offer a suitable location for development now, and be available with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Whilst five years is emphasised in the footnote, its relevance should be seen in the context of the details of the representations received from the owners of all seven proposed safeguarded sites at both the Regulation 18 stage and Martyrs Lane consultation.

As part of the Site Allocations DPD process, the Council has written to landowners of all of the sites in the DPD, to confirm the deliverability of the sites included within it. As set out in the draft document, the six proposed Regulation 18 safeguarded sites are considered to be deliverable based on the information submitted by the landowners. As part of the Martyrs Lane consultation, the Council has written to the various landowners within the site boundary. For information, the New Zealand Golf Course and McLaren Technologies Limited have confirmed that the land in their respective ownership will not be made available for residential development. It is emphasised that the lack of availability of the two sites does not entirely rule out the development of the land or any part of it. The Council can bring forward the development of the land by using its Compulsory Purchase Powers. This is something that Members may wish to consider if it concludes that the Martyrs Lane site is the most sustainable when compared with the original six safeguarded sites.

It is a matter of fact that the site referred to as GB13 in the draft Site Allocations DPD was not recommended for release from the Green Belt for development purposes in the Green Belt boundary review. The Council, as stated in the Regulation 18 consultation Issues and Matters

Topic Paper, has not taken forward the entire recommendations of the Green Belt boundary review. This, for example, includes Site 7 (land to the east of Byfleet) which was not included in the draft Site Allocations DPD based on flooding and development viability reasons. It is again highlighted that the Green Belt boundary review is just one report within the Council's evidence based that it has used to inform the Site Allocations DPD. Based on the collective findings of the evidence available, it is considered that GB13 along with the other five proposed safeguarded sites, are the most sustainable when compared against all other reasonable alternatives. The Sustainability Appraisal (SA) process has been used to appraise reasonable alternatives sites. It is objective-led and has provided a consistent basis for describing, analysing and comparing the sustainability effects of the various options and the specific proposals of the Site Allocations DPD. It also sets out why specific sites were either selected or rejected.

The views of Councillor Bowes on the soundness of the draft Site Allocations DPD have been considered by the Council at its meeting on the 20th October 2016. The Council, on the recommendations of the LDF Working Group, took the decision to consult on the land to the east of Martyrs Lane as a possible substitute for the six sites originally identified for safeguarding in the Regulation 18 version of the Site Allocations DPD. The consultation will inform the Council's decision on its preferred safeguarding option for the Regulation 19 consultation and subsequent Examination.

The Council has responded to each of the representations made during the Regulation 18 consultation and taken them into account. The Council's response to each of the 32,712 separate representations can be found online. Although the particular representations made by the representor did not result in any proposed modifications to the document, the comments were carefully considered and addressed. The fact that the representation did not result in any modifications does not mean that it was not considered.

Regarding the lack of infrastructure in Pyrford, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

As set out in the list of transport evidence base documents above, the Council has carried out an assessment of the development impacts of the Site Allocations DPD in combination with the development proposals within the wider area. This study is on the Council's website.

Regarding the Housing White Paper: Fixing Our Broken Housing Market, the White Paper sets out a number of proposed amendments to the NPPF in paragraph 1.53. The first proposed amendment seeks to increase housing density where there is a shortage of land for meeting identified housing need and the second proposed amendment seeks to increase residential density in urban locations that are well served by public transport. However it should be noted that the third proposed amendment set out in the White Paper seeks to ensure that the density and form of development reflect the character, accessibility and infrastructure capacity of an area, and the nature of local housing needs. This is broadly consistent with the policies of the Core Strategy and the Development Management Policies DPD as well as the design principles set out in the Woking Design Supplementary Planning Document (SPD). Therefore development of any of the proposed Green Belt sites, including those proposed to be allocated for safeguarding, should be designed to the highest design standards and ensure that housing density does not affect the quality and character of an area and the general well-being of residents.

The heritage and amenity value of the sites are noted and the relative merits of the sites will be considered by Members as part of the Site Allocations DPD process. These landscape features are already highlighted in part in the Surrey Landscape Character Assessment (2015). Whilst this part of the Green Belt provides amenity/recreation value, the overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

Regarding the representation on biodiversity, the Council has consulted with the relevant statutory and non-statutory consultees on this matter and their representations have been taken into account in preparing the Site Allocations DPD. The Council is committed to working with these consultees during the plan making process and beyond to ensure that any of the sites allocated or safeguarded for development do not have a significant harmful impact on biodiversity that can not be mitigated.

The Council has consulted with the relevant utility providers as part of the on-going Site Allocations DPD process. As specifically set out in paragraphs 3.9 and 3.10 of the Regulation 18 consultation Issues and Matters Topic Paper, there is no risk to water supply over the plan period as a result of planned development, whilst Thames Water has provided specific wording

to be incorporated into the key requirements of specific sites to ensure that wastewater and sewerage infrastructure needs of development are fully assessed and where necessary mitigation provided as part of the development management process.

The environmental implications of development, regardless of whether it is in Pырford or elsewhere, will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution.

The requirement to safeguard land for future development needs as part of the plan-making process is set out in paragraph 85 of the NPPF, in particular bullet points 3, 4 and 5. As set out in the draft Site Allocations DPD, the land to the east of Martyrs Lane consultation paper and the Regulation 18 consultation Issues and Matters Topic Paper, the Council is seeking to establish the principle of safeguarded land to ensure the development plan is in general conformity with the requirements of the NPPF. The release of these proposed safeguarded sites for development will only be considered following a review of the Core Strategy and or the Site Allocations DPD. The Council has also sought legal opinion on the requirement to safeguard land for future development needs. The legal opinion, as set out in the Minutes to the LDF Working Group (1st July 2016), stated that 'It has been suggested that the Council does not need, either through the Green Belt boundary review or the draft Site Allocations DPD, to identify land or sites to meet the projected housing need for the period 2027 to 2040. However, I consider that, hitherto, the Council has clearly adopted the right approach and would be committing a justiciable error if it proceeded otherwise'. It concluded by stating that 'The Council has adopted the correct approach in seeking, through the Green Belt boundary review and the Site Allocations DPD to identify land or sites to meet the projected housing need for the Borough in the period between 2027 and 2040'. The Council therefore considers the Site Allocations DPD, and in particular the safeguarding of land for future development needs between 2027 and 2040, to be consistent with national planning policy.

Matters regarding the Duty to Cooperate have been addressed by the Council in the Duty to Cooperate Bodies Topic Paper.

The Council's response below is to the 'CG Comments on the WBC Response', which refers to the Council's Regulation 18 response.

Regarding agricultural land classification, as part of the preparation of the Site Allocations DPD process, the Council has undertaken a review of agricultural land quality within the borough. This has included reviewing the Agricultural Land Classification Database as shown on the DEFRA website. This database is produced and maintained by Natural England.

In addition, the Council has consulted with Natural England as part of the Site Allocations DPD process. Natural England has not raised any objections regarding the agricultural quality of any

of the sites identified for release from the Green Belt for development needs. Natural England's representation to the Regulation 18 consultation and Land to the east of Martyrs Lane consultation are available to view on the Council's website. The representation also makes reference to the Green Belt boundary review regarding this matter. The report states that for Parcel 9, the agricultural land classification for the land adjacent to the urban areas is classified as 'urban' which is consistent with the Regional Agricultural Land Classification Maps produced by Natural England.

As set out in table 3.2 of the Green Belt boundary review, all parcels of land except for parcels 3,5,6 and 29 of are significant, major or moderate importance to the purposes of Green Belt to some degree. The purpose of the Site Allocations DPD is to allocate sites for development, safeguard land for future development needs and allocate sites for SANGs (suitable alternative natural green space). This plan led approach will make sure that any land released for development is the most sustainable when compared against reasonable alternatives. If the Council were to go against the recommendations of the Core Strategy Inspector and not prepare a Site Allocations DPD, then it would increase the risk of speculative and opportunistic unplanned development in the Green Belt based on a lack of housing supply. This could, based on the Council's evidence, have a far greater impact on the purpose and integrity of the Green Belt compared to the sites identified by the Council. This unplanned growth could also have significant impacts on the provision of essential infrastructure and services. It is therefore critical that the Council proceeds with the Site Allocations DPD process and identifies specific sites in both the existing urban areas and the Green Belt for existing and future development needs.

Whilst the Housing White Paper reconfirms the government's commitment to protecting Green Belt land, the White Paper does not propose any material change in national Green Belt policy. The Core Strategy was prepared and found sound in the context of the NPPF and in particular the Green Belt policies within it.

Regarding accessibility to services and facilities, it is correct that GB12 and GB13 are not within reasonable walking distance of Woking town centre or an existing secondary school. Nevertheless they are within a reasonable walking and cycling distance of Pyrford Neighbourhood Centre which meets the day to day needs of local residents. They also benefit from a limited public transport service. The Council recognises that regardless of what sites are safeguarded for future development needs, it will be necessary to work with bus service providers to improve service provision and frequency.

Whilst the site scores negatively on conserving and enhancing biodiversity, the Sustainability Appraisal sets out a number of potential mitigation measures that could minimise the impact of development on this sustainability criteria. It should also be noted that when compared against the alternative sites in the SA Report, the scoring for GB12 and GB13 is broadly similar with the other Green Belt sites for this particular sustainability criteria. Therefore on this matter there is little or no advantage between these sites and the alternative sites considered by the Council.

The reasons why the sites scored a double negative for conserving and enhancing the natural, historic and cultural assets and landscapes of Woking are clearly set out in the SA. The SA however identifies that the impacts could be mitigated by detailed site layout and design to retain as much openness as possible and landscape buffers to reduce the visual impact of development. For GB12 in particular, this is similar to the recommendations set out in the Green Belt boundary review. The conclusions of the Green Belt boundary review state that 'the landscape assessment notes that this site (GB12) is more discrete, partly contained by trees and set beyond the prominent slopes to the east. The site is therefore under consideration for release from the Green Belt'.

The impact of development on the escarpment can be reduced by reducing the amount of residential development and increasing the proportion of open space allocated for GB13, as set out in the SA. The matters regarding detailed site layout and the provision and distribution of open space within the site would be considered and dealt with at the development management stage.

The Surrey Landscape Character Assessment defines the landscape character of the wider Surrey area and provides a detailed assessment of the land to the south-east of Woking (parcel SS10: Woking to Byfleet Settled and Wooded Sandy Farmland) which includes both GB12 and GB13. It does not specifically assess these two sites as the assessment is a strategic one and not site specific. Nevertheless the Evaluation and Guidance of parcel SS10 makes recommendations of how development could be appropriately accommodated within the assessment parcel. Based on this information, the Council is satisfied that development can be achieved within sites GB12 and GB13 without creating a significant adverse impact on the landscape character of the wider area as well as the specific heritage and landscape designations on and in close proximity to the sites.

Whilst sites GB12 and GB13 score negatively on some of the sustainability appraisal criteria, it is important to consider their scoring across all 17 sustainability criteria as well as considering these scores against the other sites assessed by the Council.

The LDA Design response to the Regulation 18 consultation can be found on the Council's website ([www.woking2027.info](http://www.woking2027.info)) and officers can direct the representor to their representation and officer response if required.

The Council considers the Green Belt boundary review to be a robust evidence base document and as such does not intend to revisit the document.

The representation states that the views of the general public have not been taken into account. This matter has been addressed above. Nevertheless it is emphasised that the Council considered all of the representations received as part of the Regulation 18 consultation and responded to each one in turn. The Council also prepared an Issues and Matters Topic Paper outlining the Council's response to a number of similar concerns that were raised by the public and other stakeholders. It is therefore incorrect to state that the comments received from the Regulation 18 consultation were not taken into account.

The representation states that the Transport Assessment does not support the safeguarding of site GB13. The most recent transport study undertaken by the County Highways Authority as well as their representation to the Martyrs Lane consultation states that 'The Martyrs Lane site, in particular with regard to its northern end does not appear to be as sustainable in transport terms as the other Green Belt sites put forward for safeguarding'. This response will form part of the evidence that will be considered by Members in identifying a preferred safeguarding option.

Regarding existing public rights of way, these matters of detail would be considered at the development management stage if the site was safeguarded for future development needs. The Council's response at Regulation 18 regarding new pedestrian and cycle ways simply highlights that development of the site should improve access to and through the site which should help to create sustainable travel corridors. This requirement would apply to any of the proposed allocated sites.

It is considered that the procedural matters of the Site Allocations DPD process are consistent with planning regulations and all legal requirements. These matters of procedure will be considered by an independent inspector at the examination of the DPD as part of the Test of Soundness.

To conclude, the merits of each of the proposed safeguarded sites will be carefully considered by the Council as part of the next stage of Site Allocations DPD process. The representations received as part of this consultation exercise will alongside the evidence base documents inform the Council's decision on its preferred safeguarding option.

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02259/1/001  
**Customer Name:** Mr Norman Woolley

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site, which includes derelict land.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre. Development here would avoid overstressing the road network surrounding originally proposed sites, where traffic impacts would be dispersed.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information,

the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios,

including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are

classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr And Mrs Rena And Joe Giardina

**Summary of representation:**

Object to the proposal due to:

1. Loss of green belt
2. Urban sprawl and Fair Oaks development plans
3. Flood risks – due to more covered areas and loss of trees
4. Transport – roads – pressure on existing roads, especially A320
5. Transport – public – lack of public transport
6. Infrastructure – huge stress on existing services and with no plan to build more schools and hospitals in the area. Schools and Hospitals are already over stretched
7. Wildlife – loss of habitat
8. Woodlands – loss of trees and woodland
9. Flight path – development is in flight path
10. Martyrs Lane recycling centre – located right in the middle of proposed development.

**Officer Response:**

Objections are noted.

All of the issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02264/1/001  
**Customer Name:** Mr Paul Hayes

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

**Officer Response:**

Support noted

**Contributor Reference:** 02279/1/001

**Customer Name:** Ms Ann Nash

**Summary of representation:**

The development of one area makes it easier to include essential services, rather than putting pressure on existing services in five separate areas. Although the land is a lovely green lung for the area, local residents do not benefit from the golf course.

**Officer Response:**

Support is noted and the merits of the proposal as put forward in the representation will weigh in the considerations by Members.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council is working proactively with infrastructure and service providers such as Surrey County Council as transport and education authority, to ensure existing services have the capacity to accommodate future housing growth, or that new infrastructure is provided if needed.

It should be noted that there are planning policies in the Development Plan for the area that resist the loss of open space and green infrastructure (such as the golf course): currently policy CS17 of the Core Strategy, which lists criteria that any development coming forward on the Martyrs Lane site would have to take into account in order to be supported.

Whilst local residents do not directly benefit from the New Zealand Golf Club, the course is identified as a sports and recreation facility within the Borough, and the loss of it would be considered to conflict with relevant policies of the Development Plan. As with most of the golf courses within the Borough, the course provides an element of amenity and biodiversity value.

**Summary of representation:**

The proposed development would change the character of the area irrevocably, and for the worse.

**Officer Response:**

Objection is noted.

The likely impacts on the character of the area are described in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02333/1/001

**Customer Name:** Mrs R E Jarvis

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

It is close to major employers.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without

the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02260/1/001  
**Customer Name:** Mr Simon Curry

**Summary of representation:**

Supports the proposal as it would allow a new, cohesive community to be built and thrive in one place, as opposed to lots of different areas.

Would direct new development to one area, and the associated construction/roadworks.

Lower quality Green Belt – rough woodland.

Good proximity to M25, reducing the burden on the A3. Good access to Lockfield Drive area.

Opportunities for jobs at local employers, and in Chertsey and Woking.

Easily accessible for Woking Rail Station, avoiding congested areas of town.

Opportunity to include Traveller sites, and to provide social housing.

Once the school and leisure centre in Mayford are up and running, the traffic will become worse – especially that associated with large events on the running track every summer weekend. Better to redistribute development towards the north of Woking.

**Officer Response:**

Support is noted.

The merits as set out in the representation are noted and will weigh in the balance of considerations by Members.

In terms of impacts on the Green Belt:

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- o Woking Green Belt review (2013) by Peter Brett Associates; and
- o Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is

potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

In contrast, the Peter Brett report recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging impacts on landscape, for example. Detailed analysis and reasons for this recommendation are set out in the report.

In terms of accessibility of the Martyrs Lane site and traffic impacts:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including those sites proposed in the south of the Borough as referenced in the representation.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Regulation 18 Consultation Issues and Matters Topic Paper addresses the concern about potential traffic impacts in the Mayford area of the Borough, particularly at Section V (but also Sections 3, 20, D, F and U).

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

In terms of providing a mix of accommodation:

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council

also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

In terms of employment opportunities:

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Finally, Officers are confident that planning policies of the Development Plan for the area would deliver sustainable developments that would integrate well with existing communities at the originally proposed sites, equally as well as enabling the delivery of a new community at Martyrs Lane.

**Contributor Reference:** 02337/1/001  
**Customer Name:** Neil And Hanna Barclay

**Summary of representation:**

Support the proposal due to:

- Site suitability: a size possible to accommodate a large number of different dwellings which can easily help fulfil Woking's housing needs.
- Local economy: large employers nearby, benefitting local residents.
- Transport: site is near large air and ground transportation hubs.
- Environmental: no national or local designations or flood risk.
- Planning: unused land on parts of the site which have been granted planning permission, implying it has been deemed acceptable for development. Can also coordinate planning with Sheerwater redevelopment.

The development of the site would help meet CS12 and CS13 obligations (affordable housing, older people and vulnerable groups).

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of a large number of new homes as required by the Core Strategy. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Proximity to the motorway and Heathrow Airport is acknowledged. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of

79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site, including its landscape sensitivity, are set out in paragraph 3.5.11. The site is considered to have a low capacity for change, and development would lead to significant adverse effects on the landscape pattern and features. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

Finally, the requirements of policies CS12 and CS13 of the Core Strategy would apply to all options for future development, as they are all of a sufficient scale to warrant the inclusion of a mix of housing that meets the needs of the Borough. Residential development at any of the safeguarded options should be able to meet the affordable housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Customer Name:** Mr Julian Walker

**Summary of representation:**

Supports the proposal (excluding golf course) as it will have the smallest impact on the environment and infrastructure.

Pyrford sites are in agricultural use, whereas Martyrs Lane site is largely previously developed land, or derelict.

The impact on the continuity of the Green Belt will be less severe.

The northernmost field already has planning permission albeit for industrial use.

When, in 1988, there was a proposal to allow development on the Rowley Bristow site and the adjacent fields (those now designated) there was a full enquiry, which culminated in the Inspector (Mr Noble) stating most emphatically that there should be no development south of Aviary Road as the steep bank, between it and the fields formed a natural break. He said that to go further would risk virtually unlimited spread in that direction.

Part of the Martyrs Lane site is Council owned and as land prices affect the achievement of affordable housing, it would be a good opportunity to facilitate lower cost development in this area.

Infrastructure around Pyrford is overloaded (e.g. roads and sewers). Little opportunity to improve the roads and extra load would cause extra traffic. Martyrs Lane has better transport links. There are economies of scale with infrastructure investment here.

The Burhill Estates Company clearly have a very large financial incentive to get their farmland developed, but this should not be allowed to influence the selection of sites.

Queries why the Martyrs Lane site was previously overlooked.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming

the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst it is correct that the Martyrs Lane site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

It is acknowledged that part of the Martyrs Lane site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

According to studies commissioned by the Council, the impact on the Green Belt will not, in fact, be less severe. The Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after

acknowledging the references made in the representation (on urban sprawl). Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding. It should be noted, however, that the Green Belt boundary review is of the view that through good quality design and landscaping, development on the Pyrford sites can be achieved without compromising landscape character.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits regarding economies of scale associated with infrastructure provision are noted and will weigh in the balance of considerations by Members. The Council will, however, make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council acknowledges residents' concerns about overstressing of local services, but the Council is proactively working with its partners to public specific strategies and programmes to address any capacity shortages, and to deliver new infrastructure. Section 3 of the Regulation 18 Consultation Issues and Matters Topic Paper provides further details.

Regarding impacts on the transport network: the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Regulation 18 Topic Paper referred to above sets out a detailed response to concerns about transport infrastructure relating to the originally proposed sites, at Sections 3, 20, D, F, U and V.

The ownership and availability of land has not been used as a criteria to determine whether or not land should be released from the Green Belt. However, in accordance with national planning policy the availability of land is a significant consideration that the Council has to take into account. Footnote 11 and 12 of the NPPF is clear to emphasise that to be considered deliverable, sites should be available. This is necessary to ensure that any land that is identified for development has a realistic prospect of coming forward for development.

Parcels of land north of the New Zealand Golf Course that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development. It is therefore incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked.

**Contributor Reference:** 02237/1/001  
**Customer Name:** Mr Stephen Keyes

**Summary of representation:**

Supports the proposal. Development near these major local employers would maximise the infrastructure already in place here, leading to effective economic development.

**Officer Response:**

Support is noted.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The local economy in these locations would also therefore benefit from additional population growth.

**Contributor Reference:** 02240/1/001  
**Customer Name:** Ms Sarah Plastow

**Summary of representation:**

Supports the proposal.

Better to have one area of development, where new local amenities can be incorporated (e.g. doctor's surgery), than shoe-horn a large number of new homes into the over-developed areas of the Borough.

New Haw and Woodham have seen little housing development, and the residents of Woodham wouldn't experience a massive impact from this one site.

Martyrs Lane site already has suitable road access to the site i.e. the A320.

**Officer Response:**

Support is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is acknowledged that there are main roads surrounding the site. However, the proposal would have an impact on traffic as follows:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is

submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02281/1/001  
**Customer Name:** Mr Robin Milner

**Summary of representation:**

Supports the proposal.

No more than 1,024 houses should be built, thus the golf course is not needed.

Martyrs Lane site has previously developed land is partially derelict.

Considerable economies of scale from developing a single site rather than six.

With such close proximity to the A320 main road, there should be less traffic congestion than that which might be generated at the other six sites.

Access to just the one site should also ensure greater road safety.

The site is big enough to be able to cater for the required infrastructure needed by 1024 families i.e. doctors surgery ,school and transport links.

**Officer Response:**

Support is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

In terms of traffic impacts: the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of road safety, there are robust Development Plan policies to make sure that any proposal for the development of any of the site options do not adversely affect road safety. A key requirement would be to ensure development proposals provide appropriate infrastructure measures to mitigate the adverse effects of development traffic and other environmental and safety impacts (direct or cumulative). Transport Assessments and Travel Plans would be required for individual development proposals at the Development Management stage.

The merits of providing infrastructure at a single site as put forward in the representation are noted and will weigh in the balance of considerations by Members. The Council will, however, make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Customer Name:** Mr Michael Green

**Summary of representation:**

Objects to proposed development in Pyrford due to:

– adverse impacts on road safety and traffic on roads around Pyrford School – Upshot Lane is already a bottleneck and minor accidents have already occurred here.

Supports the development of around 1,000 homes on land to the north of Martyrs Lane (excluding the golf course). Any more homes would considerably increase traffic problems on the A320 and Woodham Lane.

Any new development here must include a new health centre (West Byfleet Health Centre is at capacity); a new primary school (other local schools are already heavily subscribed); and a proportion of affordable housing so that first-time buyers can get onto the property ladder.

**Officer Response:**

Support for Martyrs Lane, with conditions, is noted.

The Regulation 18 Consultation Issues and Matters Topic Paper sets addresses in detail concerns about adequate transport infrastructure associated with the originally proposed sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is true to say that development at Martyrs Lane will have an impact on traffic on surrounding roads. The Council has carried out the following separate studies to quantify and forecast

vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the Martyrs Lane site in terms of providing new, supporting infrastructure are noted and will weigh in the balance of considerations by Members. The Council acknowledges residents' concerns about overstretching of local services, but the Council is proactively working with its partners to public specific strategies and programmes to address any capacity shortages, and to deliver new infrastructure. Section 3 of the Regulation 18 Consultation Issues and Matters Topic Paper provides further details.

The Council will also make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

**Customer Name:** W J Pugh

### **Summary of representation:**

Objects to the proposal because:

1. The whole of the site falls within the green belt. When the Council granted planning permission to McLaren to build a technology centre on their existing site in 2015 it was agreed that Plan/2011/0823 would be revoked.
2. The largest part of the land is given over to recreational open space (an 18 hole golf course) with the development of other areas of the Borough the need for recreation, in particular open air recreation, will become vitally important.
3. The site is adjacent to Horsell Common which is a SSSI and has protection status (SPA) this includes a development protection zone. Much of the proposed land falls within in the protection zone.
4. Much on the land, to the north along the River Bourne, which is not part of the golf course, falls within zones 2–3 of the Environment Agency Flood Planning map. If the proposed land is developed the associated roads and surface water drainage would further exacerbate the risk of flooding and need Environment Agency approval which would be unlikely.
5. The access to the site would be via the A320 and Woodham Road both of which at the moment suffer from considerable congestion at peak times of the day. There would also need to be a large amount of supporting infrastructure e.g. roads, schools, surgery etc.
6. The existing sites that have already been safeguarded for development throughout the Borough could be better integrated with little need for additional infrastructure and lead to far less congestion.

For these reasons the proposed safeguarding of this land for development should be rejected.

### **Officer Response:**

Objection is noted.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses the issues raised in detail, including:

- Likely impact on the integrity of the Green Belt;
- Planning history regarding the revoked planning permission for McLaren land;
- Assessment of flood risk and avoidance of Flood Zones 2–3;
- Transport impacts, including on A320 and Woodham Road, and how mitigation measures would be required;
- Infrastructure provision to support development.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of

the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

The Council acknowledges that any future development on land to the east of Martyrs Lane may result in the loss of recreational open space (ie. the golf course). It should be noted that planning policy in the Core Strategy permits the loss of open space where it can be demonstrated that an alternative and equivalent or better provision is made available in the vicinity, or the development is directly related to the enhancement of the open space. Any planning application coming forward for development at the site would need to take this into account. As part of this consultation, Sport England has been consulted on the proposal and their representation and the Council's response can be accessed for further information.

The merits of safeguarding the originally proposed sites as put forward in the representation are noted and will weigh in the balance of considerations by Members.

**Contributor Reference:** 02293/1/001  
**Customer Name:** Miss Mary King

**Summary of representation:**

Supports the proposal, excluding the golf course.

This substitution involving one site instead of six separate sites would cause the least disruption to residents and traffic as there is currently no public access to the land and would minimise the overall impact of development on valuable Green Belt in the area.

The Martyr's Lane site is well served with public transport and is close to major local employers, such as St Peter's Hospital.

Much of the northern site has already been used for non-agricultural purposes and as part is publicly owned land, its sale would help council tax payers.

A single site at Martyr's Lane would also provide some economies of scale to address the many infrastructure issues concerning the original six sites and additional community services.

It would be disastrous to lose the Green Belt land of the six separate sites, which we would never be able to reclaim once it had gone, when the land to the east of Martyr's Lane would serve the purpose of providing over 1000 houses, without the massive impact and disruption which would be associated with the separate sites.

**Officer Response:**

Support for the proposal is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation on Green Belt value, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Hankinson Duckett Associates report (a landscape assessment) specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

In terms of traffic impacts and public transport:

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable

to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Finally, in terms of infrastructure provision: the merits of infrastructure provision at a single site as put forward in the representation are noted, and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of

any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 02295/1/001

**Customer Name:** Mr And Mrs David And Sarah Cockburn

**Summary of representation:**

Support the Martyrs Lane proposal.

The site is large enough to accommodate 1200 homes, including affordable housing, accommodation for older and vulnerable people, Gypsy and Traveller accommodation and the necessary infrastructure such as schools, health centres, etc. There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones and it is easier to create the associated infrastructure rather than overloading existing over-stretched facilities.

There are major employers close by which has advantages for employers and future residents.

The A320 gives easy access to the M25 and Heathrow Airport to the North, and to Woking Town Centre. The A320 to the south of Woking is already at capacity before the Hoe Valley School has opened.

The site has no national or local landscape designation unlike the other sites.

Most of the site is within Flood Zone 1 and will make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren Technology Centre, therefore there is a presumption that the land is suitable for development.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater

**Officer Response:**

Support for the Martyrs Lane site is noted. The merits of the proposal as set out in the representation are noted and will weigh in the balance of considerations by Members.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic

employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council acknowledges residents' concerns about overstressing of local services, but the Council is proactively working with its partners to publish specific strategies and programmes to address any capacity shortages, and to deliver new infrastructure. Section 3 of the Regulation 18 Consultation Issues and Matters Topic Paper provides further details.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site

Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor along Chertsey Road and Guildford Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any

development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on environmental considerations, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation on landscape designations. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Based on the Council's evidence residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Customer Name:** Ms Marilyn Wax

**Summary of representation:**

Objects to the proposal.

Such a large and concentrated development would have devastating impact on the environment, wildlife, for local families and to local infrastructure and services – most of which are at breaking point.

The site largely contains woodlands which provide habitat for wildlife. It abuts Horsell Common – a wildlife refuge of importance for ground nesting birds and other species.

If there are no brownfield sites available for development, there must be alternative sites with fewer precious woodlands and wildlife, where environmental impacts would be limited.

Local infrastructure is overburdened e.g. West Byfleet Health Centre which is struggling. Additional resources are not forthcoming to serve such a large number of new families. Pressures on local schools are intense too.

The surrounding roads are gridlocked at rush hour and cannot handle a possible 7,000 additional vehicles. Pollution impacts on the endangered wildlife of Horsell Common should be considered.

There are other options less detrimental to the environment and neighbourhoods.

**Officer Response:**

Objections to the proposal are noted and will weigh in the balance of considerations by Members.

The issues raised in the representation are addressed in detail in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper, including:

- Impacts on the environment, including woodlands and wildlife;
- Provision of supporting infrastructure and services;
- Traffic (and associated pollution) impacts and mitigation measures;
- Focusing development at a single location.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure

that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

Finally, the Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail how the Council have assessed previously developed land, and explains the justification for releasing Green Belt land (Sections 1, 2 and 11).

**Customer Name:** Ms Maggie Pearson

**Summary of representation:**

Objects to the proposal.

As a grandparent of children approaching school age, is well aware of the difficulties in finding placements in good schools in this area. With no plan to build additional schools, the pressure on the existing ones would be unacceptable and would result in larger class sizes and more pressure on amenities.

St Peters is a hospital is already struggling to cope with the needs of the catchment area. A&E does not meet the timescales for treatment and wards are oversubscribed for much of the time. To build such a huge development would only increase the pressures and would be detrimental to existing residents as well as new families on the planned development. Additionally, the Fair Oaks development which is also being considered would further add to this pressure. Were both developments to proceed the pressure would be unacceptable.

GP practices in this area are stretched to the limit e.g. at least one practice in West Byfleet is unable to take on new patients. It makes no sense at all to introduce a further large population into this area further increasing the pressure. It would be detrimental to new and existing residents alike.

Woodham Lane is already coping with more traffic than it should. Every time there is an incident on the M25, traffic gets pushed onto the A320 and Woodham Lane. Traffic jams are already frequent and annoying. The extra pressure that the Martyrs Lane development would cause is totally unacceptable.

The A320 is a major route which already has problems with congestion. To add to this situation is ridiculous and more consideration should be given to the local residents who already suffer from delayed journeys.

There is a serious lack of public transport serving this area leaving people with no alternative but to use cars.

The A320 has had many problems with flooding and there does appear to be a high water table. To remove trees and plants that absorb water would, I fear, lead to further flooding problems.

Objects strongly to the environmental impact due to further loss of Green Belt land. It is the green belt that makes this such a desirable area to live in. It is wrong to build on green belt land rather than looking at brownfield sites. The Fair Oaks development, together with Martyrs Lane, would be serious urban sprawl.

Loss of wildlife habitat is serious consideration, the proposed area is home to deer, badgers, foxes and many other small mammals, reptiles and birds. It is unacceptable to destroy this habitat.

It would have far less impact if there were several smaller developments which would have less impact, enable easier integration, and not put such unacceptable strain on existing schools, hospitals, etc.

**Officer Response:**

Objections to the proposal are noted, and will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the issues raised in the representation in detail, including:

- Provision of necessary infrastructure to support future development, such as schools and healthcare facilities;
- Assessment of traffic impacts (including on the A320 and Woodham Lane) and how mitigation measures would be required;
- Public transport provision and accessibility to local facilities;
- How flood risk would be assessed, and any mitigation measures would be implemented;
- Assessment of the impacts of loss of Green Belt land and likelihood of leading to urban sprawl;
- Environmental impacts of the development, including on wildlife;
- Consideration of the presence of a recycling centre.

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In addition, the Council is working in partnership with infrastructure providers, such as the Clinical Commissioning Groups and Surrey County Council as education authority, to identify future capacity requirements and sources of funding. This work is ongoing, and the Council will continue to take into account nearby proposals such as that at Fair Oaks to determine infrastructure requirements (such as at St Peter's Hospital, or the need for school places) and ensure that the necessary infrastructure is in place to support future development.

The Regulation 18 Consultation Issues and Matters Topic Paper explains in detail how the Council assessed brownfield land before considering Green Belt land. See Sections 1 and 11.

**Contributor Reference:** 02297/1/001  
**Customer Name:** Mr Richard Thompson

**Summary of representation:**

Support the proposal. Owners of The Hoyt, Land between 426–462 Woodham Lane, Woking (within the Martyrs Lane site).

The plot is around 5 acres, bordered by woodland and scrub to the east, south and west boundaries, and with lighter growth and open areas to the interior. The Hoyt is surrounded by developed sites, with individual houses either side, and general housing to the south of Woodham Lane.

There is documentary evidence of an original building, although this is no longer easily apparent on site.

There also appears to be a dropped kerb to the road, at the western end of the southern boundary. A crossover from the main road at this point would be consistent with the position of the original building.

The land has been in the family of some 50 years, who hope that it would be put into good use, appropriate for the community and for the setting. At the moment it is of no benefit to the community – it is inaccessible and merely sits between two private houses. By "coming out" of the green belt it would have no effect on the local area and would assist the Council in meeting their short term and future housing needs, integrated in a controlled and sustainable plan within the new infrastructure of the greater area of the Land to the East of Martyrs Lane.

There are no ownership constraints which may delay or suppress development, and the site will be available for development when the planning framework commences. The site will remain in its natural state until the development comes forward in 2027.

**Officer Response:**

Support is noted, and the Council acknowledges the location and availability of the land.

In accordance with national planning policy (the NPPF), the availability of land is a significant consideration that the Council will take into account. Footnote 11 and 12 of the NPPF is clear to emphasise that to be considered deliverable, sites should be available. This is necessary to ensure that any land that is identified for development has a realistic prospect of coming forward for the anticipated nature and type of development at the time that it is needed.

The merits of the land between 426–462 Woodham Lane in terms of being available for development are therefore recognised, and will weigh in the balance of considerations by

Members. It is agreed that it would be beneficial for the land to be used for the benefit of the community.

However, the overriding consideration for the Council is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed, or whether it is available. Whilst these matters are of material consideration, they are not the primary ones and represent two of many material considerations to be considered.

It should also be noted that whilst this part of the site is available, this is not true of the rest of the site: as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

**Customer Name:** Mr Antony Williams

### **Summary of representation:**

Supports the proposal:

– Environmental: The Brett report considered Pyrford land to be in category Major Environmental Constraint. The land is classified as grade 3 agricultural with some grade 2. The parcel is identified as an 'Escarpment and rising ground of Landscape importance.' This designation is protected in Woking Core Strategy CS24. Martyrs Lane falls into category Minor Constraint and should therefore be selected for safeguarded development land ahead of the Pyrford fields.

– Landscape character and sensitivity to change: The Brett report considered Pyrford land (parcel 9) to fall into categories – little or no capacity for change and low capacity for change. The area is considered to have a strong unspoilt rural character. The Surrey Landscape Character Assessment says of the land encompassed by parcel 9 'the enclosed farmland, experienced from the public rights of way network, give the area a rural feel.' Pyrford Neighbourhood Plan states of this area that 'The area has one particularly ancient tract around the medieval St Nicholas' Church and the escarpment along Warren Lane and Church Hill. It is believed the area represents one of Surrey's last remaining examples of natural beauty, in a farming setting.'

The Brett Report designated Martyrs Lane as having low capacity for change. The site has no local or national landscape designations. The site has been partially developed in the past and has included both military and civilian dwellings during WWII and in the post-war years.

– Economies of scale: One larger site of 1024 properties would provide economies of scale, making it easier to resolve infrastructure issues like water, waste, and electricity when compared with the provision of equal services on 6 separate sites spread across the whole borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by 6 separate sites.

– Infrastructure: The selection of Martyrs Lane would allow for a new and efficient infrastructure to be put in place on the northern sites, most likely at a lower cost to that incurred on the 6 original separate sites.

– Road links: Martyrs Lane site close to main road links, in contrast to heavily congested, narrow roads in Mayford, West Byfleet, Pyrford and Byfleet village.

– Amenity value: Green Belt land in Pyrford is very accessible and actively used by walkers, runners, cyclists and others from all across the Borough. By contrast Martyrs Lane is not easily accessible and as a result is rarely used by the public.

The Martyrs Lane site has physical capacity and space and importantly can incorporate the necessary infrastructure from the outset.

**Officer Response:**

Support is noted.

The references to Peter Brett's report are noted and taken into account. The Peter Brett report however recommends that the land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in paragraphs 4.3.10 – 4.3.11 of the report. Specific attention is drawn to following key conclusions 'the assessment of parcel 9 against the fulfilment of Green Belt purposes shows that the area fulfils a critical role in respect of Purposes 1 – 3 and has low to very low suitability as an area of search. The assessment of Landscape Character notes that the area has little/no or low capacity to accommodate change. This is a reflection of the open exposed nature of much of the parcel, and the contribution that it provides in terms of the town's setting. However, the north western part is less sensitive – it is set back from the exposed slopes and edge of the ridge and benefits from significant containment provided by a substantial tree belt along Upshot Lane just beyond the ridge top. Whilst the existing Green Belt boundary is well defined, sound alternative boundaries exist along the Upshot Lane and Pyrford Common Road'. In terms of its potential sustainability, the site is well located in close proximity to local community facilities. It lies adjacent to a village hall and scout hut, and close to a school, church and nursery. It is also within 500m from the neighbourhood centre of Pyrford. Overall, the site is considered to be suitable in sustainability terms.

The report, whilst clearly acknowledging the general comments about parcel 9, identifies the land to the rear of 79 – 95 Lovelace Drive as suitable for allocation. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The above evidence should be the basis upon which the Council should make its judgment about how the site east of Martyrs Lane compares with the six sites.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to

protect heritage and landscape features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage or landscape assets of the area.

The merits of allocating a larger site in terms of infrastructure provision are noted, and will weigh in the balance of considerations by Members. Nevertheless, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

In terms of traffic impacts and road links:

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development. Based on the evidence, it would be wrong to assume that development at Martyrs Lane would help alleviate congestion in West Byfleet more than it would be for developing the six sites.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

In terms of amenity value: whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It should also be noted that the Core Strategy, the Development Management Policies DPD and the Pyrford Neighbourhood Plan include robust policies to protect and even enhance the features of a site which provide amenity value for current and future residents: there is potential for investment to improve routes used by walkers, runners and cyclists.

**Contributor Reference:** 02327/1/001  
**Customer Name:** Mrs Anne McClean

**Summary of representation:**

Supports the proposal, for 1,024 dwellings avoiding the golf course.

This land would provide significant economic and social benefits and would be far more suitable for development than the six sites identified in the draft Site Allocations DPD.

It would make economic sense to develop one large site with the potential for superior infrastructure, rather than adding infrastructure to six smaller sites where schools and doctors surgeries are already full and traffic gridlocked.

The site includes derelict and pre-developed land, with no local or national landscape designations, some of which has recently been granted planning permission and some being publicly owned.

There is no public access to this site unlike the other proposed sites where the landscape and rural character are enjoyed through public rights of way.

A single site development at Martyrs Lane would affect fewer residents, cause less traffic congestion, provide better employment opportunities and benefit from direct road links to Woking and the M25.

Is against development on any Green Belt land in principle but appreciates that more houses have to be built.

Hopes that the Council has investigated all brownfield options. Queries why this site has only just come to light. Hopes the Council hasn't been influenced by landowners.

**Officer Response:**

Support is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs.

Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as

Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains previously developed land – existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to

isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

It is accepted that the land east of Martyrs Lane is in close proximity to employers, and can offer employment opportunities. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Regulation 18 Consultation Issues and Matters Topic Paper sets out in detail the justification for releasing Green Belt land (Sections 1 and 2), and explains how the Council has explored brownfield land opportunities (Sections 1 and 11).

The decision to consult on the possibility of substituting the Land east of Martyrs Lane for the six safeguarded sites was appropriate and reasonable. A change in circumstances with part of the land in ownership of McLaren that had occurred since the Regulation 18 version of the Site Allocations DPD was published justified the testing of this land in combination with the other adjacent sites as a reasonable alternative. The conditions attached to the latest planning approval at the McLaren site west of the A320 (PLAN/2014/1297) presented a change in circumstance to justify the Martyrs Lane consultation. Representations received during the consultation will provide useful information to inform Members on their preferred approach to safeguarding. It is important that Members of the Council are sufficiently informed before they make decisions about the version of the Site Allocations DPD that they wish to submit to the Secretary of State for Examination. In this regard, Members need to be satisfied that all reasonable options have been assessed.

**Customer Name:** Ms Maria Santos

**Summary of representation:**

Strongly objects to the proposal, due to:

- Detrimental impacts on the environment, wildlife and people living locally;
- Addition of 3,500 dwellings leading to around 7,000 extra vehicles on already congested roads i.e. A320 to M25 and to Woking Town Centre, leading to adverse impacts on roads and wildlife;
- Biodiversity impacts – ground nesting birds and other animals which are in decline due to development;
- Valuable woodlands will be affected – alternative areas without woodland should be prioritised;
- Proximity to Horsell Common;
- Lack of capacity of local infrastructure (e.g. medical centres and schools) – how would extra, new services be funded and resourced.

**Officer Response:**

Objections are noted.

The consultation proposal as stated in the consultation document is for 1200 homes on the Martyrs Lane site and not 3500.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses the issues raised in the representation in detail.

It is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development. As part of the consultation, the Council has consulted with the relevant environmental and biodiversity organisations including Natural England, Surrey Wildlife Trust and Horsell Common Preservation Society. Their comments will be addressed separately and taken into account in making a final decision on the Council's safeguarding strategy.

There is no doubt that the development of the sites will increase the population of some areas/wards. However, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy.

Development will also be designed to respect the general character of its surroundings. The Core Strategy and the Design SPD provides adequate guidance to enable this to be achieved. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt but do appreciate the need for more housing and the pressures on Borough Council's to provide this.

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site, which includes previously developed land.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.

The site is well served by public transport unlike the other sites.

The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.

It is close to major employers and used for non-agricultural purposes.

The northern site is publicly owned land so the sale would help council tax payers and fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will

only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02660/1/001  
**Customer Name:** Ms Elizabeth Southern

**Summary of representation:**

Supports the Martyrs Lane proposal excluding the New Zealand Golf Course.

Whilst being in Green Belt, planning permission was recently granted for the top part of the site.

The top part of the site includes previously developed land and is now semi–derelict. It is therefore 'lower–grade' Green Belt.

It is used for non–agricultural purposes and there is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes. There are new utilities close to the site (known by the recent disruption to the A320).

The site is well served by public transport unlike the other sites. The site has good access onto the M25 and Woking Town Centre – good for business.

Fewer residents will be disrupted by one site then by six individual sites.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other

constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Regarding the representation on Green Belt quality, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal

of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure, including utility services. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Ms Patricia Wilson

**Summary of representation:**

Summary of representation can be found in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02651/1/001

**Customer Name:** M H Alder

**Summary of representation:**

Supports the proposal.

It will result in improved access to the recycling centre.

The golf course is not used by local people, and development here can return use to local people.

Proximity to major employers.

Easy access to public transport.

Traffic congestion problems can be mitigated.

Byfleet does not have facilities to cope with additional housing e.g. doctor surgeries and schools.

Development sites at West Hall and Broadoaks are ample to meet the requirement for 550 homes on the Green Belt.

**Officer Response:**

Support is noted, and the merits set out in the representation will weigh in the balance of considerations by Members, such as bringing land into use for the benefit of local people. However, some of the merits associated with the proposal also apply to the other sites originally proposed, which are not currently used by the local community. Development proposals at all of the proposed sites bring an opportunity to improve access to the land e.g. to enhanced green infrastructure, or play facilities.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council would agree that there are opportunities to mitigate traffic impacts – associated with all the sites under consideration. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure, including, if safeguard, the sites in Byfleet. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal. The Council appreciates local residents' concern about the capacity of existing infrastructure to support new development. However, the Council is working in partnership with infrastructure providers to assess the capacity of existing infrastructure to support future development, and identify any shortfall in provision, as well as sources of funding.

As set out in the Consultation Paper, Green Belt land will be needed to meet development needs from 2022 to 2027 – which would be accommodated by proposed allocated sites in West Byfleet, but additional land is required from 2027 to 2040. It is proposed that this additional 1,200 housing could be accommodated on land to the east of Martyrs Lane, which is the topic of this consultation exercise.

**Contributor Reference:** 02664/1/001  
**Customer Name:** Ms Hilary Whittle

**Summary of representation:**

Does not agree any Green Belt land should be built on, but favours Martyrs Lane over originally proposed sites.

McLaren development is withdrawn and gives rise to a 'vacancy'.

There are derelict buildings on parts of the land.

Parts of the site are publicly owned.

Predominantly non-agricultural.

No public rights of way that might be an impediment.

Public transport is available.

Potential to improve adjacent road system.

New housing in this area will have less overall impact than elsewhere.

**Officer Response:**

Support is noted.

The Regulation 18 consultation Issues and Matters Topic Paper sets out in detail the justification for the release of Green Belt land – see Sections 1 and 2.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also

confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

The merits regarding public access to the land are noted and will weigh in the balance of considerations by Members. Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this

consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The adjacent road system does offer opportunities to be improved, but this is also true of the road network serving the originally proposed site. The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure, including transport infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The opinion about overall impact is noted. However, there will be implications from developing such a large site – for example, traffic implications. Transport studies commissioned by the Council show that existing levels of congestion are likely to be exacerbated. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

In addition, there may also be adverse impacts on the overall integrity and purpose of the Green Belt at the Martyrs Lane site. The Green Belt boundary review and the landscape assessment by Hankinson Duckett assessed the land with regards to its contribution to the purpose of the Green Belt. The reports concluded that the land was unsuitable for removal from the Green Belt. There would, therefore, be impacts if it were released.

The Council will need to weigh up the impacts of all safeguarding options in making its decision about the best strategy to take forward for Regulation 19 consultation.

**Contributor Reference:** 02656/1/001  
**Customer Name:** Mrs Jean Crowle

**Summary of representation:**

Supports the proposal in favour of developing the Pyrford fields. These fields will need to be retained for future food production.

Martyrs Lane is surrounded by better roads, able to cope with additional traffic.

**Officer Response:**

Support is noted.

It should be noted that the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA, including those in Pyrford.

Accessibility to main roads is noted, however, the traffic impacts of development need to be taken into account. The Council has carried out a series of studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs. The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the same traffic hotspots. The Regulation 18 Issues and Matters Topic Paper sets out a detailed response (under paragraph 3) to traffic concerns relating to the original proposed safeguarded sites. The transport studies confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

**Contributor Reference:** 02655/1/001

**Customer Name:** Ms Diana Lea

**Summary of representation:**

Supports the proposal for new housing and a Travellers site.

Better than constant infilling of already overcrowded areas around Woking.

The site can be supported by proper infrastructure and businesses for employment, and it offers easy access via the A320 and M25.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of much-needed new housing. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to established, major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy

that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Accessibility to the A320 and M25 is noted. The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

**Contributor Reference:** 02643/1/001  
**Customer Name:** Mrs Thelma Powell

**Summary of representation:**

Supports the proposal.

The site is large enough to accommodate 1200 houses, including affordable housing, specialist residential accommodation, and the necessary infrastructure of shops, primary schools, health centre, etc. It is much easier to create the associated infrastructure rather than overloading existing over-stretched facilities. Targets for CS12 and CS13 are not currently being met due to high land values.

It will simplify the process for obtaining planning permission.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking town centre and the mainline railway station to the south without encountering the traffic delays where roads cross railway lines. Bus routes and cycle routes, including to Woking town centre, exist already. This is a better proposal than the option of building south of Woking where the A320 is often at a standstill in the morning rush-hour and that is before the new Hoe Valley School has opened.

Suitable to accommodate one or more Gypsy and Traveller sites, to replace Ten Acres and count towards the requirement for at least 15 pitches. This would allow Travellers to live East of Woking. Almost all other pitches are at the South West side of the Borough. Any Traveller site would satisfy the Council's Core Strategy (2012), CS14, Gypsy and Traveller pitch criteria.

Any development of Gypsy and Traveller pitches would link in with other broader strategies in place which together deliver housing, pitches, and other uses, services and Green infrastructure in the most appropriate way. Pitches could be designed with the recommended privacy, security and space provisions, whilst the overall residential development could provide open-space and playground facilities.

Gypsy and Traveller pitches within the residential development would enable residents to:

- o Seek or retain employment
- o Attend school, further education or training
- o Obtain access to health services and shopping facilities.

Although in the green belt, the site has no other national or local landscape designation unlike Mayford and Pyrford sites.

Most of the site is clear of Flood Zone 2 and 3.

Much of the land is disused and derelict.

Planning permission has been granted previously, resulting in a presumption for development.

Would provide accommodate for employees of nearby major employers. A new neighbourhood centre here would also create new employment opportunities.

It is large enough to meet all the housing needs of the Borough up to 2040, but also well beyond the 2040 period.

A decision to safeguard this area now will mean that it can be taken into account in the redevelopment of Sheerwater.

**Officer Response:**

Support is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes (nor any additional homes required beyond 2040). For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The merits of the land east of Martyrs Lane as set out in the representation regarding economies of scale, affordable housing and specialist housing are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account. The Council will make sure that the development of

any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking

Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of

Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Whilst development at the Martyrs Lane site would be directed to Flood Zone 1 land, this is also true of the originally proposed sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

6

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree. The merits of the possibility of providing a new neighbourhood centre are noted, and will weigh in the considerations by Members.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

**Customer Name:** M Y Foat

**Summary of representation:**

The land has been used during WW2 as temporary housing and has sport facilities on site. This land should be strongly considered as this brownfield site should be used before greenfield land.

**Officer Response:**

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site.

**Customer Name:** Mrs Heather Fraser

**Summary of representation:**

Object to the plans to build a minimum of 12,000 homes in Woodham. The impact on the town of Woking and residents in the area would be profound. It is difficult to believe that Councillors have been serious in putting the proposal forward.

Woking's greatest asset is its good access to motorways and main roads and it is therefore essential that these roads do not become congested.

The proposed location of the development would affect these roads to such a large extent that they would be grid-locked and congested. The Six Crossroads roundabout to Woodham Lane and St Peters Hospital are already busy roads.

The railways are already facing problems, with the car parks at the stations at capacity. The railway is a great asset to Woking but not if you can't park at the stations. New residents would also require parking facilities at the stations.

There seems to be no plans for the provision of infrastructure which would be essential. There are no plans for schools and Woking already has a problem with school overcrowding and finances with its schools. Development will make the situation worse.

There is already stress on healthcare facilities such as hospitals and doctors. An influx of thousands of extra people will collapse the system.

The thinking public can see why many councillors voted to put the problem in one area rather than spread the load into areas in their constituencies.

The local area is beautiful, with tree lined roads and with easy access to the countryside. The proposal is life changing for existing residents and impractical. Hope that Councillors will come to their senses.

Another concern is the Martyrs Lane Recycling Centre. This is an asset to Woking. Development would cause the road to become grid locked.

Hope that the objections will be considered and acted upon. It is better to spread the problem to lessen the impact.

In summary:

Massive road congestion on vital roads.

The effect on rail travel, as Woking has one of the country's busiest trains already.

Parking at stations is already difficult.

The existing schools are at capacity and under funded.

There would be a significant adverse impact on healthcare facilities and provision. How would the Martyrs Lane Recycling Centre cope with a huge development adjacent to it. It is an asset to the town. The site is in a scenic area with tree lined roads and a golf course, all are all asset to wildlife and to people.

**Officer Response:**

As set out in the Land to the east of Martyrs Lane consultation document, it is anticipated that the site is sufficient to enable the delivery of at least 1,200 net additional homes and the necessary green and other infrastructure to support the potential development of the site. Therefore the 12,000 homes as set out in the representation is far in excess of the consultation proposal.

The representations regarding the road network, infrastructure provision including education and healthcare, the Martyrs Lane Recycling Centre and the railway service have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

In addition, the Council has consulted with Network Rail and the existing train operator as part of the consultation process. The Council is also committed to working with these stakeholders beyond the Site Allocations DPD process to ensure that station facilities are able to meet demand, including cycle and car parking provision. A recent example of station improvements is at Brookwood Station car park which has been decked to provide additional car parking spaces.

Regarding the impact of development on local character, it should be noted that most of the housing need in the Borough is internally generated and it is therefore envisaged that planning to meet that need should not undermine the overall social fabric of the area. The policies of the Core Strategy and Development Management Policies DPD will make sure that development at all of the proposed allocated and safeguarded sites will be built to a high standard and sympathetic to the general character of the area. By supporting development with adequate infrastructure provision it is anticipated that this will minimise any social, environmental and infrastructure pressures in the area. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

Regarding the representation on wildlife, during the preparation of the Site Allocations DPD the Council consulted with Natural England on the biodiversity value of each of the proposed sites. Overall the preferred sites did not raise any objection from Natural England based on existing biodiversity features that could not be addressed. The Council has consulted with them again as part of this consultation exercise and their comments will be considered.

A number of the proposed allocations will require a detailed ecological survey as a key requirement to assess and address any site specific ecological issues. This will help determine how development is managed on the site.

The Council is committed to conserving and protecting existing biodiversity assets within the Borough. Outside of designated important sites and habitats, the Council will encourage new development to make positive contribution to biodiversity through the creation of green spaces and the creation of linkages between sites to create a biodiversity network of wildlife corridors and green infrastructure. This is clearly set out in Core Strategy Policy CS7: Biodiversity and nature conservation. In addition to this the Council will consult with the relevant biodiversity organisations including Surrey Wildlife Trust and Natural England during the detailed planning application stage as well as require applicants to carry out prior assessments of the site to provide information on species and habitats, as set out in the site specific key Requirements. This will ensure the effective avoidance and or mitigation of any adverse effects prior to approval of the development.

The representation regarding the decision by councillors to consult on the Martyrs Lane proposal has also been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Responses Topic Paper.

**Contributor Reference:** 02662/1/001  
**Customer Name:** Mrs S A Drew

**Summary of representation:**

Difficult consultation as all sites are within the Green Belt.  
Support the Martyrs Lane proposal excluding the New Zealand Golf Course.  
Planning permission was recently granted for the top part of the site.  
The top part of the site is previously developed land and semi-derelict.  
The northern site is publicly owned land so the sale would help council tax payers  
It is close to major employers and used for non-agricultural purposes  
There is currently no public access to the land.  
A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues including affordable homes.  
The site is well served by public transport unlike the other sites.  
The northern part of the site has access to the A320 via a roundabout and onto the M25 and Woking Town Centre.  
Fewer residents will be disrupted by one site then by six individual sites.  
Support for Martyrs Lane.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established and is consistent with national planning policy. This has been set out in detail in the Regulation 18 consultation Issues and Matters Topic Paper.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the

safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

Whilst it is correct that the site is not used for agricultural purposes, this can also be said for the majority of the six original sites identified for safeguarding in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Ms Tanya Shah

**Summary of representation:**

Better to have less housing spread over the borough than to concentrate it all in one big development. This will cause total chaos on the surrounding roads, schools and doctors surgery. Also we must safeguard the natural habitat of Horsell Common.

**Officer Response:**

The issues regarding infrastructure, roads and nature have been addressed in detail in the in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper' with particular reference to sections 8, 3 and 9.

In addition, it is acknowledged that the Martyrs Lane site is in close proximity to Horsell Common. The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

**Contributor Reference:** 02641/1/001

**Customer Name:** Pat Barnes

**Summary of representation:**

Understand that there is a need for housing, especially affordable housing, in the area and not large houses in the areas around Woking.

Martyrs Lane is ideal as it is close to Woking, Chertsey and Weybridge and these places all have train stations.

There are a number of privately owned golf courses in the area when compared against other sporting facilities. Perhaps sports facilities could be included within the Martyrs Lane proposal.

Hopefully there will be no development near to commons whilst bridlepaths, footpaths and cyclepaths should be considered and new ones created.

Support the proposal. The social needs of Pyrford should not be forgotten if development is located elsewhere in the borough.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

The Borough's housing need has been assessed as part of the Core Strategy preparation and is set out within the Strategic Housing Market Assessment (SHMA). This report has since been updated (2015) and identifies that there is still a significant housing need in the Borough for both open market and affordable housing. These reports are on the Council's website.

The Core Strategy, in particular, Policy CS11: Housing mix, sets out the required housing mix that should be delivered on all residential developments. The housing mix within the policy reflects the housing need within the Borough, including the need for family sized accommodation (2 or more bedrooms). Any future residential development in the borough, regardless of whether it is at Martyrs Lane or any of the other six sites, will be required to reflect the local housing type and mix required to address local housing needs.

In addition, the Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The proximity of the Martyrs Lane site to these centres, as set out in the representation, is noted. The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By

this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is acknowledged that there are a number of golf courses within the borough. Whilst it is correct that they are privately owned and operated, it is considered that this is typical of most golf courses.

As set out in the Martyrs Lane consultation paper, if the site is safeguarded for future development needs then development of the site would include the necessary infrastructure to support the potential development of the site. This would include the provision of open space and any necessary sporting facilities. As part of the consultation process the Council has consulted with Sport England and will consider and respond to their representation separately.

The Core Strategy and Development Management DPD contain robust policies to make sure that important wildlife sites and landscape features are protected, including those surrounding development sites. In particular, policy CS7 on Biodiversity and nature conservation restricts development adjacent to designated sites where it has an adverse impact on the integrity of the nature conservation interest that cannot be mitigated. Policy CS8 also seeks to make sure that harm to the SPA and SAC is avoided as a result of development.

The exact location and provision of footpaths, cycle routes and bridleways will be considered in detail at the development management stage.

Regarding infrastructure provision in Pyrford, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts. In addition, the Pyrford Neighbourhood Development Plan sets out a number of Community Projects that will be funded in part through any CIL funding that may accrue in the neighbourhood area.

**Customer Name:** Mrs A W Milne

**Summary of representation:**

Objects to the building of houses on the fields at the end of Upshot Lane.

The main reason is the increase of traffic. The road network in the area, especially near the school is at capacity and dangerous. Also, will the school and doctors' surgeries be able to cope with additional demand.

The main road through West Byfleet is at saturation point and the parking will be totally inadequate.

Wonders if Woking Council ever thinks anything through properly.

The Martyrs Lane option makes more sense as at least the road system would be more manageable.

**Officer Response:**

Objection to development in Pyrford and support of the Martyrs Lane proposal is noted.

The reasons against development in other areas of the Borough, including Pyrford, have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular the representations regarding education and healthcare provision as well as road infrastructure.

In addition, it should also be noted that the Council is working with the Clinical Commissioning Groups (CCGs) to ensure healthcare provision and distribution is in line with planned development.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding parking provision in West Byfleet, the Council has an adopted Parking Standards SPD that states the required amount of car and cycle parking provision that should be provided as part of any development scheme. These standards are currently being updated by the Council to reflect national planning policy requirements and are expected to be adopted by the Council before the adoption of the Site Allocations DPD.

Regarding the Council's overall approach to allocating sites for development and safeguarding, it should be noted that the Council has a substantial and robust evidence base which includes studies on a wide range of matters including infrastructure provision, landscape and Green Belt. These studies and assessments have been used to inform the Site Allocations DPD. This is further set out in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02644/1/001  
**Customer Name:** Mr Gerald Payne

**Summary of representation:**

Support the proposal to safeguard land at Martyrs Lane for future development needs.

There is no need to build on the New Zealand Golf Course as the northern section of the site is 36.7ha. This is greater than the site area of the six original safeguarded sites and can accommodate the 1024 dwellings required.

The Green Belt Boundary Review notes that Parcel 9 has very low suitability for removal from the Green Belt and is described as land that is fundamental to the Green Belt. The Martyrs Lane site has low suitability and therefore should be selected before the two sites in Pyrford.

The Martyrs Lane site has low capacity for change and no local or national landscape designations. It has also been partially developed.

One larger site would provide economies of scale, making it easier to resolve infrastructure issues when compared with six separate sites spread across the borough. Fewer residents would be impacted by traffic disruption from a single site rather than that incurred by six separate sites.

The provision of additional infrastructure would be more cost effective than the original sites. There would also be no disruption to existing communities. Current development proposals in West Byfleet are more than enough for Pyrford and West Byfleet.

The site benefits from road links to Woking, Chertsey and the M25. The sites in Pyrford are only accessed by B or C Roads and already have a substantial amount of traffic on residential roads. The existing roundabout on Martyrs Lane would enable easy access to the development.

Martyrs Lane has better bus services than the other sites and enable better access to large local employers.

The West Byfleet Health Centre and Pyrford Junior School are at capacity and there is the opportunity to build new facilities within the Martyrs Lane site.

The Pyrford Green Belt is used for recreational purposes whilst the Martyrs Lane site is not easily accessible and rarely used by the public.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is

identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion along the A245 Woodham Lane/Sheerwater/Parvis Road corridor as well as the A320 corridor between Woking town centre and the M25. It is therefore likely that development at Martyrs Lane will have similar effects on the A245 corridor as the original six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts on the A245 and A320 corridors. This work is on-going and will be completed before the DPD is submitted for Examination.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By

this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02201/1/001

**Customer Name:** Mr And Mrs Michael And Gillian Hamlyn

**Summary of representation:**

The representations considers it should not be necessary to build on any Green Belt sites, but supports substituting the six sites in the draft allocation with the land east of Martyr's Lane but not building on the land on New Zealand Golf Course .

The main reasons are it is one large site would be more economic and the necessary additions to the local infrastructure could be housed on site instead of overwhelming already crowded facilities at the other sites.

The site is adjacent to the A320 which leads to the M25 and Woking , easier for traffic flow , and not driving through villages with narrow roads . The A320 also provides a good bus service, unlike our village the where the bus is every 90 minutes.

With the building confined to one site, fewer residents would be inconvenienced.

The Martyr's Lane site would be ideal for employees of St Peters Hospital , especially if some affordable houses were built on the site.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste

safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Key issues and matters Paper with particular reference to section 1.0.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values.

The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Summary of representation:**

The representation objects and does not understand the rationale behind any future large scale housing development in this particular part of Surrey. For the following reasons:

Guildford is the largest town in Surrey, followed by Woking. Other large towns are Farnham (Waverley), Camberley (Surrey Heath) and Ewell (SCC). According to census figures and Borough population statistics, Woking's growth and rate of increase far outstrips that of neighbouring boroughs. According to the Demographic Profile of Woking BC based on the 2011 Census, Woking's increase of 10.4% "is higher than that of Surrey at 6.9%, the South East at 7.9% and England at 7.9% "makes it one of the fastest growing Boroughs in the country."

Woking is the third most densely populated borough out of the twelve in Surrey. Surrey figures seem to indicate that Woking's outstanding growth means that it is time to develop other less densely populated areas of Surrey. Or even look at other less densely populated counties such as Sussex and Hampshire.

The main link roads around the Martyrs Lane site are already very busy roads, including the A320 and B385, being access routes to the M25, Chertsey to Staines, the hospital and M25.

West Byfleet is dominated by the B381 Old Woking Road, which becomes the Parvis Road and Byfleet Road. This road is a main access road to the A3 which is a main route out of London, through Guildford, down to Portsmouth. This is already a very busy road which are exacerbated by the retail and schools.

The area is so built up that it is hard to imagine how the roads can be improved to alleviate current congestion, even if there was available money. How many more people and cars can this area absorb without affecting the quality of life of existing residents.

An influx of people into the area will also impact on local health services. There are no GP practices in Pyrford. The nearest one is the Medical Centre in West Byfleet. GP surgery and A&E is at capacity.

The current residents deserve some consideration when planning further housing developments. Due to over development and urban sprawl, it is difficult to know the difference between the areas.

**Officer Response:**

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

The issue of infrastructure and evidence to support the draft site allocations are also already addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', with particular reference to section 1.0, 3.0, M and 8.0.

Whilst it is noted that the population and population density of Woking is increasing, the Council is fully committed to the comprehensive delivery of the Core Strategy. This includes the delivery of 4,964 dwellings over the plan period. This housing target is based on the local housing needs of the borough and wider housing market area. The Council has a duty to identify its housing requirements and plan for this need. Through the provision of infrastructure and other key services, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

The Council is required to undertake public consultations as part of the plan making process. These consultation periods provide an opportunity for local residents to submit any representations to the Council on the development proposals and highlight any concerns they may have. All representations are considered in detail and are used by the Council to inform its decisions.

The representation regarding urban sprawl has been addressed within the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts

varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The County Council has also carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

**Customer Name:** Ms Joanne Mathews

**Summary of representation:**

On balance, supports substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course. The reasons are, the top part of the site was recently granted planning permission and there is currently no public access to the land. A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc. The northern part of the site is well served with public transport unlike the other six sites. The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency. Much of the northern site has already been used for non-agricultural purposes and part of the northern site is publicly owned land so the sale would help council tax payers. Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300

dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages

of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future

development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

### **Summary of representation:**

On balance, supports substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course. The reasons are, the top part of the site was recently granted planning permission and there is currently no public access to the land. A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc. The northern part of the site is well served with public transport unlike the other six sites. The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre. The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency. Much of the northern site has already been used for non-agricultural purposes and part of the northern site is publicly owned land so the sale would help council tax payers. Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

### **Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300

dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages

of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in

particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future

development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyr's Lane for the safeguarded sites identified in the draft Site Allocations DPD to meet long term future development needs of the borough between 2027 and 2040. However, does not agree to building on the New Zealand Golf Course.

Opposed to development on Pyrford Green Belt due to increase in traffic congestion and a hazard to the community. Also the two fields in Pyrford are integral to the heritage setting of the area.

Supports Martyrs Lane as the top part of the site was recently granted planning permission. There is currently no public access to the land.

Traffic would easily be absorbed as there are very good main roads surrounding the Martyr's Lane site. The northern part of the site is well served with public transport unlike the other six sites.

This single site would easily accommodate 1024 new dwellings and the occupants would benefit from (a) one whole new community and (b) all amenities close at hand. Because – A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly, social housing, doctor surgeries, waste water etc.

The northern part of the site is close to major local employers i.e. St Peter's Hospital and Animal & Plant Health Agency. Also Woking Town Centre has many large shops needing staff etc. Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar

amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services,

facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02157/1/001  
**Customer Name:** Rhiannon Shah

**Summary of representation:**

The proposed number of houses will severely impact the traffic in the area and destroy the woodland. The roads need to be expanded to cater for all the extra traffic, the area will become gridlocked and a health hazard.

**Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is aware of the existing designated Ancient Woodland towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. The nature and type of some of the surveys that will be required to accompany any development proposals are landscape assessment, ecological survey and tree survey. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

**Contributor Reference:** 02161/1/001  
**Customer Name:** Mr Brian Judson

**Summary of representation:**

Having attended meetings regarding the future development of various areas of Woking, the representation considers Martyrs Lane to be the most suitable for development. This area can feed into the A320 road and this is not prime Green Belt land as it has been previously developed for army accommodation.

**Officer Response:**

Support for Martyrs Lane is noted.

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs

Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

**Contributor Reference:** 02162/1/001  
**Customer Name:** Mr Chris Barrett

**Summary of representation:**

Support for Martyrs Lane noted as it will consolidate one development and infrastructure in one place to support the development then around Pyrford.

Opposed to any further development in Pyrford. Impact on local school which is at capacity, the roads are narrow and cannot be widened, impact on parking, shops, there is little public transport, access to the A3/M25, medical facilities are over subscribed.

**Officer Response:**

Support noted for Martyrs Lane.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The representation regarding infrastructure provision, transport, public transport and medical facilities are also already addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

**Contributor Reference:** 00552/2/001  
**Customer Name:** Mr Richard Sharp

**Summary of representation:**

Support for Martyrs Lane and opposed to building on Upshot Lane Green Belt. The addition of more houses, cars and people will place further strain on local resources such as medical, traffic, schools, all of which are at capacity. Pyrford has reached its capacity and the loss of the fields will impact the community.

**Officer Response:**

Support for Martyrs Lane and opposed to building on Upshot Lane Green Belt is noted.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper'. Infrastructure and the impact on the community have also been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

**Contributor Reference:** 02167/1/001  
**Customer Name:** Ms Clare Goodberry

**Summary of representation:**

All the sites are within Green Belt, on balance, the representation is in favour of substituting the six sites totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course because the top part of the site was recently granted planning permission and there is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc.

The northern part of the site is well served with public transport unlike the other six sites

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency

Much of the northern site has already been used for non-agricultural purposes

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

**Contributor Reference:** 02168/1/001  
**Customer Name:** Ms Marilyn Montclare

**Summary of representation:**

Objects to building on Martyrs Lane site due to the loss of trees, woodland, wildlife which are good for health but will increase the traffic on the roads.

Impact on local public services, such as schools and hospitals.

**Officer Response:**

The Council is aware of the existing designated Ancient Woodward towards the northern end of the land. Should the site be safeguarded for future development needs it is not intended that this part of the land would be developed. The Council is also aware of the Government's commitment to protect Ancient Woodland and veteran trees. This is highlighted in the Housing White Paper. This particular Ancient Woodland is designated on the Council Proposals Map for protection. Policy CS7: Biodiversity and nature conservation of the Core Strategy seeks to protect Ancient Woodlands from any development that will be anticipated to have potentially harmful effects or lead to its loss. The nature and type of some of the surveys that will be required to accompany any development proposals are set out in Section 9 above. The surveys will make sure that those trees and other features of environmental and amenity significance are fully assessed and protected from development, where necessary.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

In terms of infrastructure such as school and hospitals, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. . In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

**Contributor Reference:** 02172/1/001  
**Customer Name:** Ms Florence Mills

**Summary of representation:**

Support the Martyrs lane site because it can be developed as a cohesive whole development possibly including a school/health centre etc as the school in Pyrford and West Byfleet Health Centre are fully subscribed.

The location means that its land value must be lower than in Pyrford so that some affordable housing can be built on the site which could provide homes for key workers at St Peter's Hospital and other companies in the borough.

Traffic through Pyrford and West Byfleet is already congested and this site would allow direct access to Woking and the M25. Also with the planned developments at Sheer House, Broadoaks and West Hall will add to the congestion.

There would be no disruption to local communities in the 6 sites due to building works.

The land at Martyrs Lane is currently unused as an amenity and has already been used for building whereas the two fields in Pyrford are prime agricultural land giving the village a rural feel.

**Officer Response:**

Support for Martyrs Lane noted.

In terms of infrastructure, the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. It will also identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. In terms of school and health care provision on site, it is not known at this stage which type and nature of provision will be allocated. The County Council is the education provided for the area and its views on education will be seriously considered if the site is to be allocated. If the need is proven at the time of the Core Strategy and or the site allocation DPD, the council will make it a key requirement for the development of the site to be acceptable. The Council will work constructively with the County Council to identify the necessary infrastructure to support the development of the land if it is allocated and/or developed. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative. It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The merits of the land east of Martyrs Lane as set out in the representation are noted and will weigh in the balance of considerations by Members. It is acknowledged that there are major employers in close proximity to the Martyrs Lane site that could benefit from Affordable Housing provision on the site. It is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. This site in Pyrford is not classified as high quality agricultural land by DEFRA. Whilst it is agreed that agricultural land is important for sustainable food production, it should be noted that this particular site is of low soil quality.

In terms of amenity and character, these issues have been addressed in the 'Regulation 18 Consultation Issues and Matters Topic Paper', with particular reference to section 7.0 and 21.0.

**Contributor Reference:** 02173/1/001  
**Customer Name:** Mrs Caroline Mendham

**Summary of representation:**

Green Belt land should be left undeveloped and brown field sites developed instead. However, recognising the need within the borough for more housing, Martyrs Lane site is a better option than, for example, sites identified in GB10 and GB11, because McLaren were already granted permission to build on part of the New Zealand golf course, there is a presumption that the land is suitable for development.

The site is big enough (112 hectares) to accommodate 1200 house, including much needed affordable housing, and Gypsy and Traveller sites, plus the necessary infrastructure. One single large housing estate makes it easier to create that infrastructure, rather than overloading existing over stretched facilities. The planning permission process would be simplified. It would fulfil Woking's future housing and traveller needs, even if it turns out more than 1200 houses are needed.

There are a number of major employers in the area, unlike in Mayford for example.

The A320 provides easy access to the M25 as well as Woking town centre. There are existing bus and cycle routes. Development here could avoid further increasing the congestion on the A320 south of Woking.

There are no escarpment and rising ground landscape importance issues, as you have with GB 10,11 and 13. Most of the site is clear of flood 2 and flood 3 designations, thereby reducing planning and development costs.

Use of the Martyrs Lane site helps Woking meet its requirements under CS12 and CS13 and currently, provision for Gypsy and Traveller sites is located primarily in Heathlands ward, so the Martyrs Lane site gives this section of the community an opportunity to live east of Woking, with better infrastructure and gives WBC the opportunity to satisfy a target of 15 pitches and satisfy CS14.

**Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also

confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to these three major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Development coming forward at any of the proposed sites would be expected to take these constraints into account in any planning application.

The potential for the site to provide accommodation for older people and vulnerable groups as set out in the representation is noted, but it should be noted that the other sites are also of a sufficient scale to support this type of accommodation if needed. At this stage of the plan making process, the Council is seeking to safeguard land for future development needs between 2027 and 2040. The exact type and nature of development will be considered as part of a review of the Core Strategy and or Site Allocations DPD.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and

still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

The justification for the release of Green Belt land for future development needs as well as the Council assessment of brownfield sites as part of the site allocation process have been fully addressed as set out in the 'Regulation 18 Consultation Issues and Matters Topic Paper'.

**Contributor Reference:** 02175/1/001  
**Customer Name:** Mr Ben Goodberry

**Summary of representation:**

All the sites are within Green Belt, on balance, the representation is in favour of substituting the six sites totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course because the top part of the site was recently granted planning permission and there is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc.

The northern part of the site is well served with public transport unlike the other six sites

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency

Much of the northern site has already been used for non-agricultural purposes

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generate by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;

- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding fewer residents will be impacted upon, is a matter that would be considered in detail at the Development Management stage. This would include the impact of construction and construction traffic as well as the impact of development on existing services, facilities and infrastructure. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr Mark Jones

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040 as it is in a good location.

**Officer Response:**

Support noted and it is also the case that each of the other six sites have their own locational benefits that the Council would take into account.

**Contributor Reference:** 02180/1/001  
**Customer Name:** Mr David Stedman

### **Summary of representation:**

The representation considers the development on land to the east of Martyr's Lane is preferable to other areas surrounding Woking because:

The Martyr's Lane site is larger than all other identified sites combined a development there would provide the Council with flexibility to plan future developments beyond the current timeframe. Martyr's Lane has land for 1,200 new homes, Traveller's site plus associated infrastructure and still there may be land left over.

Economies of scale in developing the site at Martyr's Lane in preference to the six other separate sites surrounding Woking. Appropriate infrastructure could be more easily and cost-effectively built at one site rather than at a number of different sites.

All roads in and around Woking, suffer from congestion and any new development can only add to the problem. However, new homes must be built. The A320 is a key road linking Woking to the M25 to the north, and Guildford to the south. However, the A320 between Woking and the McLaren roundabout has very few buildings on the roadside and presumably could be widened without too much difficulty. Whereas the section of the A320 (Egley Road) to the south of Woking has buildings all the way out to the Mayford roundabout.

Finally, if it is decided to go ahead with development of GB7, GB10 and GB11 then Mayford will be faced with significant developments for years ahead. Mayford already have the new school and additional leisure centre. Development at Martyr's Lane appears preferable to Mayford in terms of economies of scale, ease of upgrading existing main roads and providing the Council flexibility in the future.

### **Officer Response:**

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste

safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The merits of the Martyrs Lane site for Gypsy and Traveller accommodation as set out in the representation is noted. The Council has a responsibility to demonstrate that it has identified sufficient sites to meet its identified Traveller accommodation need. In doing so, the Council also has to make sure that sufficient sites have been identified to ensure the enduring permanence of the Green Belt boundary. The requirements of CS14 as well as the

Government's policy on Travellers set out in Planning Policy for Travellers will be applied irrespective of whether it is a single site or multiple sites. It should be noted that through careful design any of the proposed safeguarded sites could include pitches to meet the accommodation needs of Gypsy and Travellers.

At the Regulation 18 stage, Officers had recommended to Council that the need for Traveller accommodation should be met at Five Acres and Ten Acres and the need as determined in the TAA is 19 pitches up to 2027. At the Council meeting, Members had requested that officers revisit that recommendation and report to them before they make a decision about their strategy for the Regulation 19 consultation, Officers' are accordingly investigating this matter and will be reporting to Council in due course.

**Contributor Reference:** 00529/2/001  
**Customer Name:** Mr Paul Parsons

**Summary of representation:**

Supports development here because it is brownfield rather than greenfield which is considered far more suitable for development. The Pyrford sites are greenfield sites which are actively used for walking.

The road infrastructure in this area is better, an increase in road traffic will be much less damaging to existing local residents.

**Officer Response:**

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% (excluding Martyrs Lane) of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

**Customer Name:** Mrs Patricia Rochester

**Summary of representation:**

The representation is in favour of substituting the six sites with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course as part of the site was recently granted planning permission and there is currently no public access to the land. A single site would be the most convenient with regard to infrastructure. The northern part of the site is well served for public transport also the northern part is close to major local employers. The northern part has also been used for non-agricultural purposes and this northern part is publicly owned land and fewer Woking residents would be inconvenienced by this one site.

**Officer Response:**

A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meet the Policy CS1 tests to some degree.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day.

The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation

is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Contributor Reference:** 02198/1/001  
**Customer Name:** Mr Graham Woodham

**Summary of representation:**

Opposed to the development of Pyrford Fields as this will damage the local environment and stretch the infrastructure beyond its capability. Development of Pyrford Fields would severely compromise our local Green belt environment. Supports developing the alternative Martyrs Lane site, but only north of the New Zealand Golf Club. So the golf club land should be left intact but around a thousand houses plus local amenities such as a school and health centre should be built on the northern site off Martyrs Lane.

**Officer Response:**

Opposition to building on the Pyrford fields and support for Martyrs Lane is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding

policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The justification for the release of Green Belt land for the development has been fully addressed as part of the Officers response to the Regulation 18 Consultations of the Site Allocation DPD, as set out in the 'Regulation 18 Key issues and matters Paper. Infrastructure and amenity are also already addressed in the 'Regulation 18 Key issues and matters Paper', with particular reference to section 1.0, 3.0 and 21.0.

**Customer Name:** Mr John Hill

**Summary of representation:**

Any proposal for development in this area of Woking will result in a loss of the Green Belt that forms an integral part of the character of Woking, a town surrounded by large wooded areas and open common land. Objects to the development at Martyrs Lane because Canalside ward is currently under a new redevelopment scheme set to change the entire area with its overburdened infrastructure. Increasing housing density and manufacturing will affect everything from the declining public transport, overcrowded schools and our overstretched NHS services. This combined with the associated increases in road noise, lack of parking spaces, sewage, waste collections, light pollution and potential for an increased risk of flooding. The land to the east side of Martyrs Lane acts as a buffer separating Woking from Ottershaw (plus potential additional developments in this area) and New Haw thereby preventing any urban sprawl.

This important area is also home to wildlife species and flora and fauna that will be lost forever.

The roads are unable to cope with the increasing demands. The A320 and the A245 are an already a problem, practically uncrossable as a pedestrian during rush hours and dangerous for cyclists to use due to the volumes of traffic for example the six crossroads.

**Officer Response:**

The Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The Transport Assessment also identified the A245 as a key hot spot that will require appropriate mitigation for developing either the land east of Martyrs Lane or the other six sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required

to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

The Core Strategy sets out the development plan policy context for identifying land within the Green Belt to meet future development requirements of the borough. The Core Strategy identifies the Green Belt as a potential future direction of growth to meet housing needs, in particular, the need for family homes between 2022 and 2027. The NPPF also encourages the safeguarding of land between the urban area and the Green Belt in order to meet longer term development needs stretching well beyond the plan period. This is necessary to ensure the enduring permanence of the Green Belt boundary. To release land from the Green Belt for development, the Core Strategy requires the Council to make sure that this will not undermine its overall purpose and integrity. The purposes of the Green Belt are defined by paragraph 80 of the NPPF and Policy CS6: Green Belt of the Core Strategy. These purposes amongst others include:

- To check the unrestricted sprawl of large build up areas;
- To prevent neighbouring towns merging into one another; and
- To assist in safeguarding the countryside from encroachment.

There is a degree of relationship between these three purposes.

The Core Strategy prescribes the Green Belt boundary review as the means for making sure that the purposes of the Green Belt are not undermined when identifying specific deliverable sites to meet future development needs.

In accordance with this policy background, the Council has carried out two relevant studies:

- Woking Green Belt review (2013) by Peter Brett Associates; and
- Landscape assessment and Green Belt review (2016) by Hankinson Duckett.

Based on the outcome of the two studies, Officers broadly accept that the development of the land east of Martyrs Lane as envisaged in the consultation document will lead to a degree of urban sprawl and a significant incursion into the Green Belt.

The Peter Brett report assessed the land east of Martyrs Lane (identified within Parcel 2 of the report) and concluded that it has low suitability for removal from the Green Belt. There is

potential for development to lead to the perception of merging with development on the part of the site owned by McLaren. The parcel of land has 'strong character with extensive woodland which contributes to enclosure and defines the northern setting of Woking. The land has limited capacity to accommodate further significant development without significant adverse effects on important landscape features and prevailing strong character'.

The Hankinson Duckett Associates report specifically assessed the land east of Martyrs Lane against the purposes of the Green Belt. Its conclusions are broadly similar to the Peter Brett's report. The land is critically important in its contribution towards the purposes of the Green Belt. In particular, it concluded that the land has critical importance to the Green Belt with regard to urban sprawl and the prevention of towns merging, but the Bourne River and associated flood zone to the north of the site acts as a very strong durable boundary in preventing encroachment beyond that point.

The conclusions of the two studies are sufficiently clear to demonstrate that the development of the land east of Martyrs Lane would lead to urban sprawl and an incursion into the Green Belt.

It is important to emphasise that the overall purpose of the planning system as set out in the NPPF is to contribute to the achievement of sustainable development, and the Council's ultimate decisions must be seen in this overall context. Each policy in the NPPF, including the Green Belt policies is servant to the overall goal of achieving sustainable development. Regarding the spatial distribution of future development across the borough, meeting this goal would include in addition to the purposes of the Green Belt, the consideration of other factors and evidence studies such as the sustainability appraisal, proximity of sites to services and facilities, potential to encourage sustainable modes of travel and minimise adverse impacts on climate change, land availability and deliverability and the realistic prospect for mitigating development impacts, amongst other things. The decision by the Council about its preferred site(s) for the purposes of the Regulation 19 consultation should rest on balancing all these factors. Other sections of this Issues and Matters paper address some of these other factors in detail.

Policy CS9: Flooding and water management of the Core Strategy expects development to be directed to Flood Zone 1 where there is minimum risk of flooding. The land east of Martyrs Lane has a total area of about 112.14 ha. 102.6 ha (91.53%) of this is in Flood Zone 1, 3.16 ha (2.82%) is in Flood Zone 2 and 6.34 ha (5.65%) is in Flood Zone 3. It is always the intention of the Council that if the land is to be safeguarded, development will be concentrated on the part of the land that is in Flood Zone 1 and the consultation document makes this point very clear in paragraph 2.5. By releasing Green Belt land for future development, the Council also has to make sure that there is a strong defensible Green Belt boundary. The areas of the land covered by Flood Zones 2 and 3 are included within the safeguarded designation to make sure that there is a strong defensible Green Belt boundary. Given the location and size of the land, a detailed flood risk assessment will be a requirement of any development proposal on the site that would come forward for determination. This is a key policy requirement that will have to be met for the development to comply with both the policies of the NPPF and the Core

Strategy. Policy CS9 of the Core Strategy also allows circumstantial evidence to be taken into account on a case by case basis and for sustainable drainage systems to be incorporated into development such as this. Based on the above, it is not envisaged that the occupants of the development on the site would face unacceptable risk of flooding. Insurance of properties that could be developed on the site would not be adversely affected and the development of the site would not exacerbate flood risk elsewhere.

Officers would agree that public transport infrastructure currently serving the vicinity of the Martyrs Lane area is relatively limited. However, this would equally be true for most of the other six safeguarded sites. Access to rail stations by public transport from the various sites has already been dealt with above. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. It would therefore be necessary for the Council to work with providers to improve service provision and frequency, in particular the 592 if this site were to be safeguarded for future development. As emphasised above, bus services serving the other six safeguarded sites are also relatively limited and their development would equally require measures to improve services in these areas.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The land is not covered by any absolute environmental constraints. The constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land. It is acknowledged that there is an Ancient Woodland towards the northern part of the site and this will be protected as part of any development of the site if the land were to be safeguarded. The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and

tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

The social and environmental implications of the site will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage. It should be noted that these policies would apply to any of the allocated sites in the Site Allocations DPD.

**Customer Name:** Ms Carol Mellor

**Summary of representation:**

Opposed to Martyrs Lane site due to traffic is already very congested in that area.

**Officer Response:**

The Council is fully aware of local resident's concern about the existing traffic conditions on various transport routes and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate mitigation to address the adverse impacts of the development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

It would be simplistic to assume that the forecast trips generated from development of the six original safeguarded sites will be distributed across the borough whilst development at Martyrs Lane will concentrate all the traffic impacts on one heavily congested area. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

The A320 is appropriately acknowledged to be affected whether development happens at Martyrs Lane or at the other six sites.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measure that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

**Customer Name:** Mr And Mrs Grahame And Linda Fleet

**Summary of representation:**

All of the seven sites under discussion are in Greenbelt, on balance, support substituting the six sites, totalling 1,024 dwellings in the draft Site Allocations DPD, with land to the east of Martyrs Lane but excluding building on the New Zealand Golf Course. The key reasons are the top part of the site was recently granted planning permission and there is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc.

The northern part of the site is well served with public transport unlike the other six sites

The northern part of the site has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

The northern part of the site is close to major local employers like St Peter's Hospital and Animal & Plant Health Agency

Much of the northern site has already been used for non-agricultural purposes

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites

**Officer Response:**

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to

enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a

development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to these major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

**Customer Name:** Ms Wendy Collins

**Summary of representation:**

Supports the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD (in Byfleet, Mayford and Pyrford), to meet long term future development needs of the borough between 2027 and 2040.

The representation considers, the points raised on the "NoWoodhamNewTown" website and conclude that the single Martyrs Lane site is far preferable to the scattered alternatives previously included in the draft DPD. This is not only for economies of scale but also because there are far better opportunities for improving access and connections to Martyrs Lane than for the already over-congested alternatives.

Adding more than 1000 homes anywhere within the borough will exacerbate existing congestion problems. Only the Martyrs Lane site may minimise the adverse impact as it is on the outskirts of the main population. Much of the traffic may be directed away from the centre. Infrastructure improvements and increased capacity can be realised at Martyrs Lane that would not be practicable elsewhere within more central areas. These include health care and school provisions, plus high speed broadband connections which may encourage working from home and thus reduced commuter traffic.

Further reasons to prefer the Martyrs Lane site include:

The northern part of the site is better served with public transport unlike the other six sites  
The top part of the site also includes pre-developed land used as a wartime army camp, and now semi derelict.

The northern part of Martyrs Lane site excluding the New Zealand Golf Course is sufficient to accommodate the 1,024 homes proposed in the draft Site Allocations DPD.

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

**Officer Response:**

Support noted for Martyrs Lane site.

The site boundary (as defined by the red line in the Consultation Document) is the subject of the consultation and if the site were to be safeguarded the Council will carry out further work to determine the nature and where the physical development could be accommodated as well as the necessary green infrastructure to support it. At this stage it would be unreasonable to rule out the New Zealand Golf Course as part of this consideration. The Council's objective for this particular exercise is to safeguard land that will enable the delivery of at least 1,200 homes.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure including education, broadband and healthcare provision. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

In terms of traffic congestion, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on land has been previously developed for non agricultural purposes, it is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Customer Name:** Mr And Mrs N Douglas And Adrienne S Brown

**Summary of representation:**

Support the Martyrs Lane proposal excluding the New Zealand Golf Course.

Planning permission was recently granted for the top part of the site.

The top part of the site includes previously developed land and is now semi-derelict. It is not high quality green belt land.

The northern site is publicly owned land, and would assist tax payers.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues.

The site is well served by public transport.

It is close to major employers.

Would be less disruptive to residents.

**Officer Response:**

Support for the land to the east of Martyrs Lane is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02666/1/001

**Customer Name:** G S Salt

**Summary of representation:**

Supports the proposal – on land north of the golf course.

Disagrees in principle with the current policy of allocating penny pockets of development on the fringes of existing neighbourhoods in this country. Such developments are not big enough to justify additional shops, schools and transport infrastructure. They cause strain on the neighbourhoods.

Would prefer to see more comprehensive development which might cater for the whole of West Surrey for the rest of this century, containing facilities, including workplaces, which would be lacking in smaller developments.

**Officer Response:**

Support for the proposal is noted.

Whilst the representation notes that the New Zealand Golf Course should be excluded from the site boundary, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The views expressed in the representation regarding wider spatial planning policy are noted. However, the Council is expected and committed to the comprehensive delivery of the requirements of the Core Strategy by allocating specific sites to bring forward their delivery, and in doing so meet the clearly stated national objective to boost significantly the supply of housing. Local authorities are responsible for establishing the right level of local housing provision in their area and identifying the long term supply of housing land to meet needs.

The Core Strategy makes provision for 4,964 net additional dwellings which will mostly be directed to previously developed land in the town, district and local centres. However, the Green Belt is identified as a broad location for the future direction of growth to meet housing need from 2022 onwards. If the council does not allocate sites in the Borough to meet these housing needs, it will not meet its national housing requirements, and it is likely that speculative development in unsustainable locations would arise.

Section 3 of the Regulation 18 consultation Issues and Matters Topic Paper sets out in detail how the Council ensures that development is supported by adequate infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The merits of a more comprehensive development as set out in the representation are noted however at this stage no strategic development sites have been identified in the West Surrey area to meet the housing needs of the area for the rest of the century. As stated above, the Council is responsible for identifying and establishing its housing need based on local evidence and for setting the planning policy framework to facilitate the delivery of housing to meet this need. The Council is also working with other authorities in the area to address common issues such as housing delivery.

**Officer Response:**

The Council's response can be found in the 'Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper'.

**Contributor Reference:** 02642/1/001  
**Customer Name:** Ms Susan Jones

**Summary of representation:**

Objects to the proposal. It is not 'safeguarding it'; it is condemning it and residents to a huge impact whilst the LDF Working Group Councillors liberate their own constituencies in the South from any burden for housing building.

It will cause urban sprawl and create a conurbation.

Already bad traffic congestion on A320 and Woodham Road will worsen from thousands more cars, which also cause air pollution (already at high levels). EU estimates cause of deaths of 10,000pa in London alone.

Adverse impact on Horsell Common SPA and Natura 2000 site and its endangered species with hundreds of cats and other pets.

Yet to assess the huge value of this deciduous forested area and its veteran trees with TPOs etc, which complements the SPA and heathlands of the famous golf course.

Golf course may be lured by WBC into selling its land, which will magnify the debt of the hugely debt-burdened Council.

Vast infrastructure will be required to service the conurbation.

A320 suffers sink holes.

The area is in a floodplain according to British Geological Survey.

Blighted by constant aeroplane noise and speeding traffic reverberating on hard-surfaced residential roads.

Cumulative impacts from Fair Oaks development – around 5,000 homes altogether.

WBC planning officers have indicated this is not suitable for development. Councillors please reassess.

**Officer Response:**

Objections are noted and will weigh in the balance of considerations by Members.

The Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper addresses many of the concerns raised in detail, including: the assessed impact on the Green Belt and urban sprawl; the Councillors on the LDF Working Group and the justification for the

consultation on this new site, given the change in circumstances with McLaren's planning approval and the need to assess all reasonable alternatives; traffic impacts on the A320 and Woodham Road leading to increased pollution; impacts on Horsell Common SPA and heathlands and Ancient Woodland; the need for an ecological assessment of the site to determine its green infrastructure and biodiversity value; availability of the New Zealand Golf Course and prospect that the land will be available; infrastructure provision; sink holes on the A320; flood risk of the site; cumulative impacts with nearby proposals such as that at Fair Oaks; noise pollution from aeroplanes.

In terms of cumulative traffic impacts when taking into account nearby development proposals such as that at Fair Oaks, the Council has carried out a Transport Assessment to quantify the vehicular trips that will be generated by development of the Martyrs Lane site. The assessment demonstrates that development at the site will exacerbate traffic conditions on the A320 corridor that will require appropriate mitigation. The Council is working with the County Council to identify the necessary measures of mitigation. The Council is aware of the potential developments at Longcross in Runnymede and Fair Oaks in Surrey Heath, which could also have traffic implications on the A320. At this stage, no cumulative transport assessment has been done to quantify the overall impact of these developments on the A320. However, the Council is working in partnership with Surrey Heath and Runnymede Borough Council and the County Council to carry out a strategic transport assessment of the developments, and in particular, their implications on the A320 with the view to identifying the mitigation that might be necessary to enable the sustainable development of the three major sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It should be noted that it is proposed that the land to the east of Martyrs Lane is used to meet housing needs between 2027 and 2040, assessed to be 1,200 homes.

**Contributor Reference:** 02637/2/001

**Customer Name:** Woodham And Horsell Neighbourhood Forum

**Summary of representation:**

1. LSE A 21st Century Metropolitan Green Belt – LSE A 21st Century Metropolitan Green Belt has done research on what types of land is most important to protect from development. This highlights over 70% of people value land with endangered wildlife, 54% value scenic land, only 40% value quality farmland and 17% value small parcels of land near other developments. This research proves that Woking Borough Council's original site allocations are far more suitable than the proposal to replace these several sites with the land east of Martyrs Lane. The report also suggests that the duty to cooperate will not produce a strategic response to the region's housing needs. The plans to develop Fair Oaks Airport and other developments in Surrey Heath and Runnymede boroughs have direct impact on Woking Borough Council's decision and further indicate that the land east of Martyrs Lane is not suitable.

2. SANGs – The current proposal includes sufficient SANGs capacity for the six sites. Horsell Common Preservation Society has indicated that more SANGs would be required given the size and close proximity of the land east of Martyrs Lane to SSSI. Natural England has clarified the purpose of SANGs and the requirements for their accessibility. Woodland or semi-wooded landscape is a key feature that people appreciate in the sites they visit, particularly those who use the SPA. This is considered to be more attractive than open landscapes or parklands with scattered trees. It is therefore hard to justify how the current proposed areas of SANGs would meet the specified standards set by Natural England. Given comments made by Rural England that visitors favour Woodland or a semi-wooded landscape, why would residents of land east of Martyrs Lane want to go to these SANGs over the SPA.

3. 2016 Air Quality Annual Status Report (ASR) – According to the Air Quality Report published by the Council, there is only one area in Knaphill that has been declared an Air Quality Management Area. However the A320 is an area of concern, and monitoring stations have been used near the site at Woodham Lane, Lincoln drive and Church. Woodham Lane already has by far higher levels of NO<sub>2</sub>. The Council has a responsibility to measure and improve air quality and any development needs to be sensitive to air quality. New houses and more cars in an already high air pollution area would increase levels of NO<sub>2</sub> whereas spreading the development over 6 sites would be far less damaging.

4. Transport hotspots – The proposals in the draft Site Allocations DPD do not present significant transport issues. However, Six Cross Roads, Martyrs Lane and Woodham Lane are all shown as major concerns if Martyrs Lane is to be developed. Police data also shows that Woodham Lane is an accident blackspot. None of the six sites will generate traffic concerns and none are accident blackspots. Only the area outside the Pyrford Primary School is highlighted as potential hotspot.

5. Schools – There is no local primary school within walking distance that kids could go to. The closest would be the Marist Catholic School which is already at capacity with no room to expand.
6. Natural Working Strategy March 2016 – The Council has failed to comply with the requirements of its own Natural Working Strategy. The Strategy states that the Council will:
  - promote high quality environment, biodiversity and sustainable development. It will take measures to protect priority wildlife species population, by reducing habitat fragmentation.The proposal contradicts the above. It would lead to the loss of woodland and would devastate habitat for many species. The other sites are all less diverse than the land east of Martyrs Lane.
7. Safeguarded plans – The land contains sites that are safeguarded for waste and mineral extraction that would be lost by the proposal. If they are not developed, there will be less development on the site than anticipated, and this would lead to more of the New Zealand Golf Course being developed. The NPPF seeks to protect minerals safeguarded sites.
8. Other development sites – There are other sites that have not been considered which they should. This includes Traditions in Pyrford and Sutton Green, where the current owners are struggling to make money and have approached the Council before about possible development.
9. The Government White Paper on housing – The Housing White Paper has made it clear that local authorities should amend Green Belt boundary only when they can demonstrate that they have examined fully all other reasonable options for meeting development requirements and where land is removed from the Green Belt, local authorities should require the impacts to be offset by compensatory improvements to the environmental quality or accessibility of the remaining Green Belt land. This suggests that the Council would need to do further evidence before removing any land from the Green Belt. So far the Council has not published any evidence of the actual needs of housing from 2027 – 2040. Given the requirements of the White Paper, the Council should stop the preparation of the Site Allocations DPD process to safeguard land for 2027 – 2040 until such time that it can clearly demonstrate a requirement.
10. Peter Brett Associates report – Residents and other Wards are quoting the Peter Brett's report as the reason why Martyrs Lane should be considered. However, the report concludes and recommends that Parcel 2 – the land east of Martyrs Lane is not recommended to be released from the Green Belt.
11. Notes of Council meetings – There have been several meetings about the proposal that highlights a lack of evidence used by councillors to justify the safeguarding of the land east of Martyrs Lane. At no point did the Council give any consideration to the cost involved in this exercise. The LDF Working Group went against the available evidence and the advice of Officers. Given that Councillor Bowes represents the Ward of Pyrford, his actions at the Working Group could be seen as Nimbyism because he presented no credible evidence to justify his proposal to include the land east of Martyrs Lane as alternative safeguarded site. The Working Group should not have been allowed to make its recommendations without

evidence. The Working Group should be held accountable for all the cost they have incurred for embarking on this exercise when they have no evidence to do so. The Working Group has misled the Council.

12. Sustainability Appraisal – The representation accepts that the sustainability appraisal is comprehensive but disagrees with some of the scoring in the report. Full details are in the representation but have been taken into account in the Officer's response.

13. Other factors – Some people have claimed that only Parcel A, the northern part of the land is required to build the required number of houses. However, the Hankinson Duckett study has concluded otherwise. Taking into account the flood risk areas, the remaining area can only be developed at a density of 68.7 dph to achieve the required number of dwellings proposed for the site.

14. Runnymede Borough Council objections – The representations by Runnymede Borough Council shows the lack of cooperation between Runnymede Borough Council and Woking Borough Council. The Council needs to cooperate with its neighbouring authorities and have a duty to care for each other and respect each others' views.

#### **Officer Response:**

1. The Council has not carried out a similar research quoted in the representation to assess the opinions of people about the value they attach to different types of land and therefore cannot endorse or disprove it. Regardless of this, the research does not prove that any of the options considered is better than the other. There is also no evidence to claim that any of the sites is habitat to endangered species. There are no absolute environmental constraints on any of the sites that would prevent their development if the Council decides on its preferred approach to safeguarding. The Council has robust policies in place to make sure that the ecological integrity on any site is not compromised as a result of development. This will be key requirement for the allocation of the site. It is important to emphasise that the Council's decision on the preferred approach to safeguarding will not rest only on the opinion of how different types of land are valued by people. The overall goal of the Council is to identify sites in sustainable locations that would contribute towards achieving sustainable development, and this should be done within the context of the overall spatial strategy for the Borough. Whilst the ecological integrity of the land will always be a material consideration, there are other factors too such as the proximity of the site to key services and facilities, availability and deliverability, risk of flooding, ability to be supported by the necessary infrastructure and many more that needs to be taken into account. The duty to cooperate is a legal duty and the Council has been cooperating with the neighbouring authorities in the preparation of the plan. The Council is satisfied that so far the requirements of the duty to cooperate are being met.

2. The Council has identified sufficient SANG capacity to meet the development needs of the Core Strategy. Horsell Common Preservation Society has made representations as a result of the consultation regarding the provision of SANGs to serve development at Martyrs Lane, and these are addressed separately. In summary, Officers believe that some of the concerns

expressed by Horsell Common Preservation Society are misplaced. The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy and the CIL Charging Schedule. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided appropriate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the land east of Martyrs Lane or the other six sites. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England has submitted representations in response to the consultation. It does not have any objection in principle to the safeguarding of the site subject to the appropriate scale of SANG being provided. Natural England notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. There are a number of examples to draw lessons. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed. The draft Site Allocations DPD proposes to allocate a number of sites for SANGs. Natural England has been consulted and they have not raised any objection in principle. The proposed SANGs would be the requirements for SANG designation. The Council does not accept that the SANG proposals in the draft Site Allocations DPD will not meet development needs and/or achieve their intended objectives.

3. There is no declared air quality management area in the vicinity of the Martyrs Lane site. The Council has robust policies to manage air quality impacts as a result of development. In

particular, Policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as policies DM5, DM7 and DM8 of the development Management Policies DPD that would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

4. The Council is fully aware of local concerns about the existing traffic conditions on various transport routes including the Woodham Lane and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate measures of mitigation to address the adverse impacts of proposed development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including potential development at Martyrs Lane.

It is too simplistic to assume that the development of the six sites will not raise significant transport issues. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. It is important to stress that in this particular case the comparison would be between the development impacts of Martyrs Lane against the cumulative impacts of the six sites.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. The Council is also working in partnership with Surrey Heath and Runnymede Borough Councils and the County Council to quantify the cumulative transport impacts of developments in the three authorities, including developments at Longcross and Fair Oaks if the Martyrs Lane site is safeguarded. The outcome of the study will also help determine the strategic mitigation measures that might be needed to address the cumulative impacts. The Council accepts that the safeguarding proposals would lead to an increase in traffic as demonstrated by its own studies, and mitigation will be needed to address that. It is working with the relevant bodies to determine the appropriate mitigation measures to enable the sustainable delivery of the proposals.

5. The Council will make sure that the development of any safeguarded site is supported by the necessary infrastructure including education provision. The County Council has made representation to confirm that if the Martyrs Lane site is to be developed in the future, the expectation would be that a primary school should be provided on site. If the need is proven, it will be a key requirement for the development to provide a primary school on site. In this regard, the concern raised will be fully addressed.

6. It is not envisaged that the development of the site if it is safeguarded would be contrary to the provisions of the Natural Woking Strategy. The site can be developed without compromising the nearby Thames Basin Heaths Special Protection Area. Its safeguarding would not be contrary to Policies NRM6 of the South East Plan and CS8: Thames Basin Heath Special Protection Areas of the Core Strategy if sufficient SANG capacity could be identified to support the development and a contribution is made towards Strategic Access Management and Monitoring. Any mitigation will also take into account the proximity of the site to the designated SPA. The Council can demonstrate that sufficient land will be available to support the development. The Core Strategy has robust policies to make sure that harm to the SPA as a result of development is avoided, and this will apply to any future proposal for development. Policy CS7: Biodiversity and nature conservation is sufficiently robust to protect the ecological integrity of the site. Based on the above, the Council is satisfied that the site could be developed to be in conformity with the Natural Woking Strategy. This representation has also been comprehensively addressed in the Council's response to the Woodham and Horsell Neighbourhood Forum's representations (see Woodham and Horsell Neighbourhood Forum – Issues and Matters Topic Paper).

7. The Council recognises the contribution that the community recycling centre makes towards its objective to maximise recycling in the borough. Its retention on the land as part of the master planning of the site or the provision of a new facility at an enhanced location will be made a key requirement of the allocation of the site if it is allocated. The County Council who owns the facility is supportive of this approach, and will work with the Council to agree the most effective way of retaining the facility. The owner of the land safeguarded for minerals extraction has submitted a representation as part of the Martyrs Lane consultation, and has indicated support for the site to be safeguarded to meet future housing needs of the Council. In this regard, the land could be available for future housing needs subject to further discussion with the County Council on whether or not the site will continue to be needed for their future purposes. At this stage the County Council is unsure about the future need of the site for their purposes until further assessment is undertaken as part of the emerging Surrey Waste Local Plan. Officers will continue to liaise with the County Council on this matter, and are confident that a consensus would be reached.

8. Traditions in Pyrford and Sutton Green Golf Course have not been assessed as part of this process. The land east of Martyrs Lane has been assessed because parts of it had already been assessed as part of the Regulation 18 consultation. Given the changing circumstances at the McLaren site regarding the extant planning permission that could be revoked, there is justification to assess the prospect of a comprehensive development of the entire area.

9. It is important to highlighting that the Housing White Paper does not seek to change the direction of national policy as set out in the NPPF, and neither is it an in-principle new policy. It is only intended to clarify what the existing Green Belt policies mean in practice. Woking Borough Council had always understood the interpretation of the national policy on Green Belt and is already practicing what the White Paper is proposing and as such there will be no need to carry out any further work as suggested by the representation and no purpose will be served by stopping the Site Allocations DPD process. The White Paper itself goes at length to explain that there is no change in policy regarding Green Belt. The White Paper also has suggested compensatory improvements to the environmental quality or accessibility of the remaining Green Belt when Green Belt land is released. The Council has sought further clarification on what this would be in practice in its response to the consultation on the White Paper. Even that, the Council can demonstrate that it can and is meeting this particular requirement.

The NPPF and the White Paper both offers the same strict protection to the Green Belt. The principle that once established the Green Belt boundaries should only be altered in exceptional circumstances through the review of the Local Plan has not changed. The Council has rigorously applied this principle to underpin the preparation of the Core Strategy and the Site Allocations DPD.

A key factor that has mainly been taken into account to justify exceptional circumstances for releasing Green Belt land through the plan making process has been to demonstrate that alternative options have been fully considered, including a thorough assessment of the capacity of the urban area to accommodate projected development needs. The Strategic Housing Land Availability Assessment (SHLAA) and the Employment Land Review are evidence

to demonstrate the assessment of brownfield sites. Paragraph 159 of the NPPF requires Local Planning Authorities to prepare as evidence 'a strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period'. Generally and specifically in Woking, SHLAAs has mainly focused on urban sites, predominantly previously developed land and how their uses can be maximised.

The Core Strategy takes this principle fully on board. In particular, Policy CS1: A spatial strategy for Woking Borough of the Core Strategy and its reasoned justification seeks to maximise the use of brownfield land. The high indicative densities set out in Policy CS10: Housing provision and distribution of the Core Strategy also reflects this principle. There are therefore clear and strong policy framework to prioritise and support development on previously developed land at high densities subject to character and environmental considerations.

Planning decisions relating to development proposals in Woking Town Centre also rigorously applies this principle. The Victoria Square and Goldsworth Road approved proposals are good examples. The Victoria Square proposal is about 660dph. The proposed indicative densities for the proposals in the draft Site Allocations DPD also seeks to maximise the efficient use of urban land. The Sheerwater scheme is a classic example of how the Council is using urban regeneration to improve living and environmental conditions of the area as suggested in the White Paper. On the basis of this, the Council has done more than the White Paper requires, and does not need to do any further work in response to the White Paper.

The NPPF is clear about the need and the reasons for safeguarding sites to ensure the enduring permanence of the Green Belt boundary beyond the plan period. It would be unreasonable within this policy context to accurately predict the exact future housing requirement. Right, the projections are based on a thorough assessment of historical data and intelligent assumptions of future provision of housing. The assumptions are credible, acknowledging that an exact housing requirement could only be determined as part of the review of the Core Strategy, an up to date evidence at the time and appropriate scrutiny at an examination. The 2027 – 2040 housing provision of 1,200 dwellings is on the basis that the Council will continue to provide 292 dwellings per year.

For the 13 year period, this is estimated to be 3,796 dwellings. It is assumed that lower density development in the Green Belt of about 30dph will continue into the future. An intelligent assumption has been made that the urban area will continue to make a significant contribution towards housing supply during that period in line with the overall spatial strategy. The estimated projection is that the urban area will provide about 50% of the total supply of housing during that period. A marginal allowance has been made for windfall development, which will continue to come forward during that time. Historical estimates over 10 years suggest that about 40 dwellings per year will be delivered through this source. On the basis of the above the figure of 1,200 specified in the consultation document for which land is sought is a reasonable and realistic expectation of what would be accommodated on the safeguarded site(s).

10. The Council is aware that the Peter Brett's report did not recommend that Parcel 2 be released from the Green Belt. This is a material consideration that the Council will take into account when considering the representations to the consultation.

11. The Council is transparent about the conduct of its meetings and has published the Officers' advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agreed that the consultation on the land east of Martyrs Lane was necessary and the representations that are received during the consultation will be source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of Officers, it is clear from the Minutes of the meetings that they carefully considered the report before reaching their recommendations. The Working Group also had all the necessary evidence before them to inform their recommendations. Appropriate procedure is followed in this regard. The Council has not yet made any decision on the Officers report or the recommendations of the Working Group. It has rightly reserved its right and authority to do so after careful consideration of the representations received during the Martyrs Lane consultation. The request for further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and to make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided reasons for their recommendations. Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD (Regulation 19). Councillor Bowes has also been transparent about his proposed amendment at the Working Group. There is nothing improper about his conduct in this regard. He provided clear reasons for his amendment and it will be up to the Council to judge whether or not the recommendations of the Working Group are rational. The fact Councillor Bowes is a Ward Councillor in a ward that Green Belt sites are proposed to be released should not be a reason to prevent him from participating in discussions about the Site Allocations DPD in an open and transparent manner, in particular, as the Working Group is only a scrutiny and an advisory group.

12. It is noted that the representation has come to different conclusions on some of the scorings in the sustainability appraisal. It is reasonable to expect that this could happen. The Council has used consistent and clear assumptions to inform the scoring and are satisfied of the scores.

13. The geographical extent of the land east of Martyrs Lane is defined by a Map and it includes the golf course. The Council had not specified which parts of the land will be used for what purpose. This is a decision that will broadly be informed by the representations to the consultation and in detail through a potential masterplanning of the land if it is safeguarded. The consultation document was also clear that the land should be capable of delivering at least 1,200 homes. This is necessary to justify it as an alternative to the six sites it seeks to replace. The Hankinson Duckett report has recommended that the development of Parcel A (north of the land) will lead to an isolated development in the Green Belt. The Council will take the information into account to inform its final decisions.

14. Runnymede Borough Council has made a separate representation regarding the duty to cooperate, which has been fully addressed. Officers strongly disagree with their assertion that the Council has not met its requirements for the duty to cooperate by not consulting Runnymede and the neighbouring authorities prior to the consultation. The claim is factually incorrect. The Council resolved to consult on the possibility of substituting the land east of Martyrs Lane for the six original safeguarded sites at its meeting on 20 October 2016. Runnymede Borough Council and the other neighbouring authorities were notified of the Council's decision soon after that on 24 October 2016. The Council had not previously considered this matter. The proposal was referred to Council for consideration by the LDF Working Group and the 20 October 2016 meeting was the first time the Council had considered the matter.

Runnymede Borough Council was once again invited on 28 October 2016 to send the Council any informal representations they may have and for them to be taken into account before the proposal was formally published for consultation. They were also offered an opportunity to meet to discuss the details of the proposal and the nature of the consultation. The Council met them to do so. The consultation started on 6 January 2017 for a period of six weeks, and they were formally consulted. The Council is satisfied that it has gone beyond the requirements of the duty to cooperate to reach out to the neighbouring authorities and to listen to any concerns they may have, and it is not correct to suggest that Runnymede was not adequately consulted. The Council understands that the duty to cooperate is a continuous process and has subsequently been engaging with Runnymede and Surrey Heath Borough Councils after the consultation period to establish a framework for joint working in the future. The above clearly demonstrates that the Council has positively engaged with Runnymede regarding this particular issue.

**Customer Name:** Mr Matthew Ryder

### **Summary of representation:**

1 LSE A 21st Century Metropolitan Green Belt – LSE A 21st Century Metropolitan Green Belt has done research on what types of land is most important to protect from development. This highlights over 70% of people value land with endangered wildlife, 54% value scenic land, only 40% value quality farmland and 17% value small parcels of land near other developments. This research proves that Woking Borough Council's original site allocations are far more suitable than the proposal to replace these several sites with the land east of Martyrs Lane. The report also suggests that the duty to cooperate will not produce a strategic response to the region's housing needs. The plans to develop Fair Oaks Airport and other developments in Surrey Heath and Runnymede boroughs have direct impact on Woking Borough Council's decision and further indicate that the land east of Martyrs Lane is not suitable.

2 SANGs – The current proposal includes sufficient SANGs capacity for the six sites. Horsell Common Preservation Society has indicated that more SANGs would be required given the size and close proximity of the land east of Martyrs Lane to SSSI. Natural England has clarified the purpose of SANGs and the requirements for their accessibility. Woodland or semi-wooded landscape is a key feature that people appreciate in the sites they visit, particularly those who use the SPA. This is considered to be more attractive than open landscapes or parklands with scattered trees. It is therefore hard to justify how the current proposed areas of SANGs would meet the specified standards set by Natural England. Given comments made by Rural England that visitors favour Woodland or a semi-wooded landscape, why would residents of land east of Martyrs Lane want to go to these SANGs over the SPA.

3 2016 Air Quality Annual Status Report (ASR) – According to the Air Quality Report published by the Council, there is only one area in Knaphill that has been declared an Air Quality Management Area. However the A320 is an area of concern, and monitoring stations have been used near the site at Woodham Lane, Lincoln drive and Church. Woodham Lane already has by far higher levels of NO<sub>2</sub>. The Council has a responsibility to measure and improve air quality and any development needs to be sensitive to air quality. New houses and more cars in an already high air pollution area would increase levels of NO<sub>2</sub> whereas spreading the development over 6 sites would be far less damaging.

4 Transport hotspots – The proposals in the draft Site Allocations DPD does not present significant transport issues. However, Six Cross Roads, Martyrs Lane and Woodham Lane are all shown as major concerns if Martyrs Lane is to be developed. Police data also shows that Woodham Lane is an accident blackspot. None of the six sites will generate traffic concerns and none are accident blackspots. Only the area outside the Pyrford Primary School is highlighted as potential hotspot.

5 Schools – There is no local primary school within walking distance that kids could go to. The closest would be the Marist Catholic School which is already at capacity with no room to expand.

6 Natural Woking Strategy March 2016 – The Council has failed to comply with the requirements of its own Natural Woking Strategy. The Strategy states that the Council will:

o promote high quality environment, biodiversity and sustainable development. It will take measures to protect priority wildlife species population, by reducing habitat fragmentation.

The proposal contradicts the above. It would lead to the loss of woodland and would devastate habitat for many species. The other sites are all less diverse than the land east of Martyrs Lane.

7 Safeguarded plans – The land contains sites that are safeguarded for waste and mineral extraction that would be lost by the proposal. If they are not developed, there will be less development on the site than anticipated, and this would lead to more of the New Zealand Golf Course being developed. The NPPF seeks to protect minerals safeguarded sites.

8 Other development sites – There are other sites that have not been considered which they should. This includes Traditions in Pyrford and Sutton Green, where the current owners are struggling to make money and have approached the Council before about possible development.

9 The Government White Paper on housing – The Housing White Paper has made it clear that local authorities should amend Green Belt boundary only when they can demonstrate that they have examined fully all other reasonable options for meeting development requirements and where land is removed from the Green Belt, local authorities should require the impacts to be offset by compensatory improvements to the environmental quality or accessibility of the remaining Green Belt land. This suggests that the Council would need to do further evidence before removing any land from the Green Belt. So far the Council has not published any evidence of the actual needs of housing from 2027 – 2040. Given the requirements of the White Paper, the Council should stop the preparation of the Site Allocations DPD process to safeguard land for 2027 – 2040 until such time that it can clearly demonstrate a requirement.

10 Peter Brett Associates report – Residents and other Wards are quoting the Peter Brett's report as the reason why Martyrs Lane should be considered. However, the report concludes and recommends that Parcel 2 – the land east of Martyrs Lane is not recommended to be released from the Green Belt.

11 Notes of Council meetings – There have been several meetings about the proposal that highlights a lack of evidence used by councillors to justify the safeguarding of the land east of Martyrs Lane. At no point did the Council give any consideration to the cost involved in this exercise. The LDF Working Group went against the available evidence and the advice of Officers. Given that Councillor Bowes represents the Ward of Pyrford, his actions at the Working Group could be seen as Nimbyism because he presented no credible evidence to justify his proposal to include the land east of Martyrs Lane as alternative safeguarded site. The Working Group should not have been allowed to make its recommendations without evidence. The Working Group should be held accountable for all the cost they have incurred for embarking on this exercise when they have no evidence to do so. The Working Group has misled the Council.

12 Sustainability Appraisal – The representation accepts that the sustainability appraisal is comprehensive but disagrees with some of the scoring in the report. Full details are in the representation but have been taken into account in the Officer's response.

13 Other factors – Some people have claimed that only Parcel A, the northern part of the land is required to build the required number of houses. However, the Hankinson Duckett study has concluded otherwise. Taking into account the flood risk areas, the remaining area can only be developed at a density of 68.7 dph to achieve the required number of dwellings proposed for the site.

14 Runnymede Borough Council objections – The representations by Runnymede Borough Council shows the lack of cooperation between Runnymede Borough Council and Woking Borough Council. The Council needs to cooperate with its neighbouring authorities and have a duty to care for each other and respect each others' views.

**Officer Response:**

1 The Council has not carried out a similar research quoted in the representation to assess the opinions of people about the value they attach to different types of land and therefore cannot endorse or disprove it. Regardless of this, the research does not prove that any of the options considered is better than the other. There is also no evidence to claim that any of the sites is habitat to endangered species. There are no absolute environmental constraints on any of the sites that would prevent their development if the Council decides on its preferred approach to safeguarding. The Council has robust policies in place to make sure that the ecological integrity on any site is not compromised as a result of development. This will be key requirement for the allocation of the site. It is important to emphasise that the Council's decision on the preferred approach to safeguarding will not rest only on the opinion of how different types of land are valued by people. The overall goal of the Council is to identify sites in sustainable locations that would contribute towards achieving sustainable development, and this should be done within the context of the overall spatial strategy for the Borough. Whilst the ecological integrity of the land will always be a material consideration, there are other factors too such as the proximity of the site to key services and facilities, availability and deliverability, risk of flooding, ability to be supported by the necessary infrastructure and many more that needs to be taken into account. The duty to cooperate is a legal duty and the Council has been cooperating with the neighbouring authorities in the preparation of the plan. The Council is satisfied that so far the requirements of the duty to cooperate are being met.

2 The Council has identified sufficient SANG capacity to meet the development needs of the Core Strategy. Horsell Common Preservation Society has made representations as a result of the consultation regarding the provision of SANGs to serve development at Martyrs Lane, and these are addressed separately. In summary, Officers believe that some of the concerns expressed by Horsell Common Preservation Society are misplaced. The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy and the CIL Charging Schedule. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided appropriate contributions are made towards the

provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the land east of Martyrs Lane or the other six sites. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England has submitted representations in response to the consultation. It does not have any objection in principle to the safeguarding of the site subject to the appropriate scale of SANG being provided. Natural England notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. There are a number of examples to draw lessons. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed. The draft Site Allocations DPD proposes to allocate a number of sites for SANGs. Natural England has been consulted and they have not raised any objection in principle. The proposed SANGs would be the requirements for SANG designation. The Council does not accept that the SANG proposals in the draft Site Allocations DPD will not meet development needs and/or achieve their intended objectives.

3 There is no declared air quality management area in the vicinity of the Martyrs Lane site. The Council has robust policies to manage air quality impacts as a result of development. In particular, Policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as policies DM5, DM7 and DM8 of the development Management Policies DPD that would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

4 The Council is fully aware of local concerns about the existing traffic conditions on various transport routes including the Woodham Lane and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generate by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate measures of mitigation to address the adverse impacts of proposed development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);

- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including potential development at Martyrs Lane.

It is too simplistic to assume that the development of the six sites will not raise significant transport issues. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. It is important to stress that in this particular case the comparison would be between the development impacts of Martyrs Lane against the cumulative impacts of the six sites.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

A245 Woodham Lane/Sheerwater/Parvis Road;  
A320 Chertsey Road/Guildford Road; and  
B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. The Council is also working in partnership with Surrey Heath and Runnymede Borough Councils and the County Council to quantify the cumulative transport impacts of developments in the three authorities, including developments at Longcross and Fair Oaks if the Martyrs Lane site is safeguarded. The outcome of the study will also help

determine the strategic mitigation measures that might be needed to address the cumulative impacts. The Council accepts that the safeguarding proposals would lead to increase in traffic as demonstrated by its own studies, and mitigation will be needed to address that. It is working with the relevant bodies to determine the appropriate mitigation measures to enable the sustainable delivery of the proposals.

5 The Council will make sure that the development of any safeguarded site is supported by the necessary infrastructure including education provision. The County Council has made representation to confirm that if the Martyrs Lane site is to be developed in the future, the expectation would be that a primary school should be provided on site. If the need is proven, it will be a key requirement for the development to provide a primary school on site. In this regard, the concern raised will fully addressed.

6 It is not envisaged that the development of the site if it is safeguarded would be contrary to the provisions of the Natural Woking Strategy. The site can be developed without compromising the nearby Thames Basin Heaths Special Protection Area. Its safeguarding would not be contrary to Policies NRM6 of the South East Plan and CS8: Thames Basin Heath Special Protection Areas of the Core Strategy if sufficient SANG capacity could be identified to support the development and a contribution is made towards Strategic Access Management and Monitoring. Any mitigation will also take into account the proximity of the site to the designated SPA. The Council can demonstrate that sufficient land will be available to support the development. The Core Strategy has robust policies to make sure that harm to the SPA as a result of development is avoided, and this will apply to any future proposal for development. Policy CS7: Biodiversity and nature conservation is sufficiently robust to protect the ecological integrity of the site. Based on the above, the Council is satisfied that the site could be developed to be in conformity with the Natural Woking Strategy. This representation has also been comprehensively addressed in the Council's response to the Woodham and Horsell Neighbourhood Forum's representations (see Woodham and Horsell Neighbourhood Forum – Issues and Matters Topic Paper).

7 The Council recognises the contribution that the community recycling centre makes towards its objective to maximise recycling in the borough. Its retention on the land as part of the master planning of the site or the provision of a new facility at an enhanced location will be made a key requirement of the allocation of the site if it is allocated. The County Council who owns the facility is supportive of this approach, and will work with the Council to agree the most effective way of retaining the facility. The owner of the land safeguarded for minerals extraction has submitted a representation as part of the Martyrs Lane consultation, and has indicated support for the site to be safeguarded to meet future housing needs of the Council. In this regard, the land could be available for future housing needs subject to further discussion with the County Council on whether or not the site will continue to be needed for their future purposes. At this stage the County Council is unsure about the future need of the site for their purposes until further assessment is undertaken as part of the emerging Surrey Waste Local Plan. Officers will continue to liaise with the County Council on this matter, and are confident that a consensus would be reached.

8 Traditions in Pyrford and Sutton Green Golf Course have not been assessed as part of this process. The land east of Martyrs Lane has been assessed because parts of it had already been assessed as part of the Regulation 18 consultation. Given the changing circumstances at the McLaren site regarding the extant planning permission that could be revoked, there is justification to assess the prospect of a comprehensive development of the entire area.

9 It is important to highlighting that the Housing White Paper does not seek to change the direction of national policy as set out in the NPPF, and neither is it an in-principle new policy. It is only intended to clarify what the existing Green Belt policies mean in practice. Woking Borough Council had always understood the interpretation of the national policy on Green Belt and is already practicing what the White Paper is proposing and as such there will be no need to carry out any further work as suggested by the representation and no purpose will be served by stopping the Site Allocations DPD process. The White Paper itself goes at length to explain that there is no change in policy regarding Green Belt. The White Paper also has suggested compensatory improvements to the environmental quality or accessibility of the remaining Green Belt when Green Belt land is released. The Council has sought further clarification on what this would be in practice in its response to the consultation on the White Paper. Even that, the Council can demonstrate that it can and is meeting this particular requirement.

The NPPF and the White Paper both offers the same strict protection to the Green Belt. The principle that once established the Green Belt boundaries should only be altered in exceptional circumstances through the review of the Local Plan has not changed. The Council has rigorously applied this principle to underpin the preparation of the Core Strategy and the Site Allocations DPD.

A key factor that has mainly been taken into account to justify exceptional circumstances for releasing Green Belt land through the plan making process has been to demonstrate that alternative options have been fully considered, including a thorough assessment of the capacity of the urban area to accommodate projected development needs. The Strategic Housing Land Availability Assessment (SHLAA) and the Employment Land Review are evidence to demonstrate the assessment of brownfield sites. Paragraph 159 of the NPPF requires Local Planning Authorities to prepare as evidence 'a strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period'. Generally and specifically in Woking, SHLAAs has mainly focused on urban sites, predominantly previously developed land and how their uses can be maximised.

The Core Strategy takes this principle fully on board. In particular, Policy CS1: A spatial strategy for Woking Borough of the Core Strategy and its reasoned justification seeks to maximise the use of brownfield land. The high indicative densities set out in Policy CS10: Housing provision and distribution of the Core Strategy also reflects this principle. There are therefore clear and strong policy framework to prioritise and support development on previously developed land at high densities subject to character and environmental considerations.

Planning decisions relating to development proposals in Woking Town Centre also rigorously applies this principle. The Victoria Square and Goldsworth Road approved proposals are good examples. The Victoria Square proposal is about 660dph. The proposed indicative densities for the proposals in the draft Site Allocations DPD also seeks to maximise the efficient use of urban land. The Sheerwater scheme is a classic example of how the Council is using urban regeneration to improve living and environmental conditions of the area as suggested in the White Paper. On the basis of this, the Council has done more than the White Paper requires, and does not need to do any further work in response to the White Paper.

The NPPF is clear about the need and the reasons for safeguarding sites to ensure the enduring permanence of the Green Belt boundary beyond the plan period. It would be unreasonable within this policy context to accurately predict the exact future housing requirement. Right, the projections are based on a thorough assessment of historical data and intelligent assumptions of future provision of housing. The assumptions are credible, acknowledging that an exact housing requirement could only be determined as part of the review of the Core Strategy, an up to date evidence at the time and appropriate scrutiny at an examination. The 2027 – 2040 housing provision of 1,200 dwellings is on the basis that the Council will continue to provide 292 dwellings per year.

For the 13 year period, this is estimated to be 3,796 dwellings. It is assumed that lower density development in the Green Belt of about 30dph will continue into the future. An intelligent assumption has been made that the urban area will continue to make a significant contribution towards housing supply during that period in line with the overall spatial strategy. The estimated projection is that the urban area will provide about 50% of the total supply of housing during that period. A marginal allowance has been made for windfall development, which will continue to come forward during that time. Historical estimates over 10 years suggest that about 40 dwellings per year will be delivered through this source. On the basis of the above the figure of 1,200 specified in the consultation document for which land is sought is a reasonable and realistic expectation of what would be accommodated on the safeguarded site(s).

10 The Council is aware that the Peter Brett's report did not recommend that Parcel 2 be released from the Green Belt. This is a material consideration that the Council will take into account when considering the representations to the consultation.

11 The Council is transparent about the conduct of its meetings and has published the Officers' advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agreed that the consultation on the land east of Martyrs Lane was necessary and the representations that are received during the consultation will be source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of Officers, it is clear from the Minutes of the meetings that they carefully considered the report before reaching their recommendations. The Working Group also had all the necessary evidence before them to inform their recommendations. Appropriate procedure is followed in this regard. The Council has not yet made any decision on the Officers report or the recommendations of the Working

Group. It has rightly reserved its right and authority to do so after careful consideration of the representations received during the Martyrs Lane consultation. The request for further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and to make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided reasons for their recommendations. Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD (Regulation 19). Councillor Bowes has also been transparent about his proposed amendment at the Working Group. There is nothing improper about his conduct in this regard. He provided clear reasons for his amendment and it will be up to the Council to judge whether or not the recommendations of the Working Group are rational. The fact Councillor Bowes is a Ward Councillor in a ward that Green Belt sites are proposed to be released should not be a reason to prevent him from participating in discussions about the Site Allocations DPD in an open and transparent manner, in particular, as the Working Group is only a scrutiny and an advisory group.

12 It is noted that the representation has come to different conclusions on some of the scorings in the sustainability appraisal. It is reasonable to expect that this could happen. The Council has used consistent and clear assumptions to inform the scoring and are satisfied of the scores.

13 The geographical extent of the land east of Martyrs Lane is defined by a Map and it includes the golf course. The Council had not specified which parts of the land will be used for what purpose. This is a decision that will broadly be informed by the representations to the consultation and in detail through a potential masterplanning of the land if it is safeguarded. The consultation document was also clear that the land should be capable of delivering at least 1,200 homes. This is necessary to justify it as an alternative to the six sites it seeks to replace. The Hankinson Duckett report has recommended that the development of Parcel A (north of the land) will lead to an isolated development in the Green Belt. The Council will take the information into account to inform its final decisions.

14 Runnymede Borough Council has made a separate representation regarding the duty to cooperate, which has been fully addressed. Officers strongly disagree with their assertion that the Council has not met its requirements for the duty to cooperate by not consulting Runnymede and the neighbouring authorities prior to the consultation. The claim is factually incorrect. The Council resolved to consult on the possibility of substituting the land east of Martyrs Lane for the six original safeguarded sites at its meeting on 20 October 2016. Runnymede Borough Council and the other neighbouring authorities were notified of the Council's decision soon after that on 24 October 2016. The Council had not previously considered this matter. The proposal was referred to Council for consideration by the LDF Working Group and the 20 October 2016 meeting was the first time the Council had considered the matter.

Runnymede Borough Council was once again invited on 28 October 2016 to send the Council any informal representations they may have and for them to be taken into account before the proposal was formally published for consultation. They were also offered an opportunity to meet to discuss the details of the proposal and the nature of the consultation. The Council met them to do so. The consultation started on 6 January 2017 for a period of six weeks, and they were formally consulted. The Council is satisfied that it has gone beyond the requirements of the duty to cooperate to reach out to the neighbouring authorities and to listen to any concerns they may have, and it is not correct to suggest that Runnymede was not adequately consulted. The Council understands that the duty to cooperate is a continuous process and has subsequently been engaging with Runnymede and Surrey Heath Borough Councils after the consultation period to establish a framework for joint working in the future. The above clearly demonstrates that the Council has positively engaged with Runnymede regarding this particular issue.

**Contributor Reference:** 02147/2/001

**Customer Name:** Ms Jo Ryder

**Summary of representation:**

1 LSE A 21st Century Metropolitan Green Belt – LSE A 21st Century Metropolitan Green Belt has done research on what types of land is most important to protect from development. This highlights over 70% of people value land with endangered wildlife, 54% value scenic land, only 40% value quality farmland and 17% value small parcels of land near other developments. This research proves that Woking Borough Council's original site allocations are far more suitable than the proposal to replace these several sites with the land east of Martyrs Lane. The report also suggests that the duty to cooperate will not produce a strategic response to the region's housing needs. The plans to develop Fair Oaks Airport and other developments in Surrey Heath and Runnymede boroughs have direct impact on Woking Borough Council's decision and further indicate that the land east of Martyrs Lane is not suitable.

2 SANGs – The current proposal includes sufficient SANGs capacity for the six sites. Horsell Common Preservation Society has indicated that more SANGs would be required given the size and close proximity of the land east of Martyrs Lane to SSSI. Natural England has clarified the purpose of SANGs and the requirements for their accessibility. Woodland or semi-wooded landscape is a key feature that people appreciate in the sites they visit, particularly those who use the SPA. This is considered to be more attractive than open landscapes or parklands with scattered trees. It is therefore hard to justify how the current proposed areas of SANGs would meet the specified standards set by Natural England. Given comments made by Rural England that visitors favour Woodland or a semi-wooded landscape, why would residents of land east of Martyrs Lane want to go to these SANGs over the SPA.

3 2016 Air Quality Annual Status Report (ASR) – According to the Air Quality Report published by the Council, there is only one area in Knaphill that has been declared an Air Quality Management Area. However the A320 is an area of concern, and monitoring stations have been used near the site at Woodham Lane, Lincoln drive and Church. Woodham Lane already has by far higher levels of NO<sub>2</sub>. The Council has a responsibility to measure and improve air quality and any development needs to be sensitive to air quality. New houses and more cars in an already high air pollution area would increase levels of NO<sub>2</sub> whereas spreading the development over 6 sites would be far less damaging.

4 Transport hotspots – The proposals in the draft Site Allocations DPD does not present significant transport issues. However, Six Cross Roads, Martyrs Lane and Woodham Lane are all shown as major concerns if Martyrs Lane is to be developed. Police data also shows that Woodham Lane is an accident blackspot. None of the six sites will generate traffic concerns and none are accident blackspots. Only the area outside the Pyrford Primary School is highlighted as potential hotspot.

5 Schools – There is no local primary school within walking distance that kids could go to. The closest would be the Marist Catholic School which is already at capacity with no room to expand.

6 Natural Woking Strategy March 2016 – The Council has failed to comply with the requirements of its own Natural Woking Strategy. The Strategy states that the Council will:

- o promote high quality environment, biodiversity and sustainable development. It will take measures to protect priority wildlife species population, by reducing habitat fragmentation.

The proposal contradicts the above. It would lead to the loss of woodland and would devastate habitat for many species. The other sites are all less diverse than the land east of Martyrs Lane.

7 Safeguarded plans – The land contains sites that are safeguarded for waste and mineral extraction that would be lost by the proposal. If they are not developed, there will be less development on the site than anticipated, and this would lead to more of the New Zealand Golf Course being developed. The NPPF seeks to protect minerals safeguarded sites.

8 Other development sites – There are other sites that have not been considered which they should. This includes Traditions in Pyrford and Sutton Green, where the current owners are struggling to make money and have approached the Council before about possible development.

9 The Government White Paper on housing – The Housing White Paper has made it clear that local authorities should amend Green Belt boundary only when they can demonstrate that they have examined fully all other reasonable options for meeting development requirements and where land is removed from the Green Belt, local authorities should require the impacts to be offset by compensatory improvements to the environmental quality or accessibility of the remaining Green Belt land. This suggests that the Council would need to do further evidence before removing any land from the Green Belt. So far the Council has not published any evidence of the actual needs of housing from 2027 – 2040. Given the requirements of the White Paper, the Council should stop the preparation of the Site Allocations DPD process to safeguard land for 2027 – 2040 until such time that it can clearly demonstrate a requirement.

10 Peter Brett Associates report – Residents and other Wards are quoting the Peter Brett's report as the reason why Martyrs Lane should be considered. However, the report concludes and recommends that Parcel 2 – the land east of Martyrs Lane is not recommended to be released from the Green Belt.

11 Notes of Council meetings – There have been several meetings about the proposal that highlights a lack of evidence used by councillors to justify the safeguarding of the land east of Martyrs Lane. At no point did the Council give any consideration to the cost involved in this exercise. The LDF Working Group went against the available evidence and the advice of Officers. Given that Councillor Bowes represents the Ward of Pyrford, his actions at the Working Group could be seen as Nimbyism because he presented no credible evidence to justify his proposal to include the land east of Martyrs Lane as alternative safeguarded site.

The Working Group should not have been allowed to make its recommendations without evidence. The Working Group should be held accountable for all the cost they have incurred for embarking on this exercise when they have no evidence to do so. The Working Group has misled the Council.

12 Sustainability Appraisal – The representation accepts that the sustainability appraisal is comprehensive but disagrees with some of the scoring in the report. Full details are in the representation but have been taken into account in the Officer's response.

13 Other factors – Some people have claimed that only Parcel A, the northern part of the land is required to build the required number of houses. However, the Hankinson Duckett study has concluded otherwise. Taking into account the flood risk areas, the remaining area can only be developed at a density of 68.7 dph to achieve the required number of dwellings proposed for the site.

14 Runnymede Borough Council objections – The representations by Runnymede Borough Council shows the lack of cooperation between Runnymede Borough Council and Woking Borough Council. The Council needs to cooperate with its neighbouring authorities and have a duty to care for each other and respect each others' views.

#### **Officer Response:**

1 The Council has not carried out a similar research quoted in the representation to assess the opinions of people about the value they attach to different types of land and therefore cannot endorse or disprove it. Regardless of this, the research does not prove that any of the options considered is better than the other. There is also no evidence to claim that any of the sites is habitat to endangered species. There are no absolute environmental constraints on any of the sites that would prevent their development if the Council decides on its preferred approach to safeguarding. The Council has robust policies in place to make sure that the ecological integrity on any site is not compromised as a result of development. This will be key requirement for the allocation of the site. It is important to emphasise that the Council's decision on the preferred approach to safeguarding will not rest only on the opinion of how different types of land are valued by people. The overall goal of the Council is to identify sites in sustainable locations that would contribute towards achieving sustainable development, and this should be done within the context of the overall spatial strategy for the Borough. Whilst the ecological integrity of the land will always be a material consideration, there are other factors too such as the proximity of the site to key services and facilities, availability and deliverability, risk of flooding, ability to be supported by the necessary infrastructure and many more that needs to be taken into account. The duty to cooperate is a legal duty and the Council has been cooperating with the neighbouring authorities in the preparation of the plan. The Council is satisfied that so far the requirements of the duty to cooperate are being met.

2 The Council has identified sufficient SANG capacity to meet the development needs of the Core Strategy. Horsell Common Preservation Society has made representations as a result of the consultation regarding the provision of SANGs to serve development at Martyrs Lane, and

these are addressed separately. In summary, Officers believe that some of the concerns expressed by Horsell Common Preservation Society are misplaced. The Thames Basin Heath Joint Strategic Partnership Board (JSPB) coordinates a strategic approach to the protection of the SPA and working with Natural England has agreed the most appropriate avoidance/mitigation measures to avoid harm to the SPA as a result of development impacts. In particular, it requires that no sites should be allocated or granted planning permission for net new residential development within 400 metres exclusion zone from the SPA. New residential development beyond 400 metres but within 5 kilometres of the SPA boundary will be required to make an appropriate contribution towards the provision of Suitable Alternative Natural Greenspace (SANG) and the Strategic Access Management and Monitoring (SAMM). Details of how the requirements will apply are set out in the Council's SPA Avoidance Strategy and the CIL Charging Schedule. The land east of Martyrs Lane is outside the 400 metres exclusion zone but within the 5 kilometres from the SPA boundary. Its potential safeguarding or allocation for development will therefore comply with Policy NRM6 of the South East Plan and Policy CS8 of the Core Strategy provided appropriate contributions are made towards the provision of SANG and SAMM. In this regard, there could be no in principle policy objection to the safeguarding of the land east of Martyrs Lane or the other six sites. Officers are confident that the above requirements will be met if the Council decides to safeguard the land for future development.

It is acknowledged that the proximity of development to the SPA is an issue that needs to be taken into account in seeking to avoid harm to the SPA. However, that is not and should not be an absolute constraint to development. In fact there are a number of examples of major applications/proposals at a similar distance from the SPA such as Queen Elizabeth Barracks and Deepcut Barracks where appropriate mitigation has been agreed to avoid significant adverse impacts on the SPA. The Council will work in partnership with Natural England to agree appropriate measures of mitigation for any potential proposal.

Natural England has submitted representations in response to the consultation. It does not have any objection in principle to the safeguarding of the site subject to the appropriate scale of SANG being provided. Natural England notes the proximity of the site to the SPA and has recommended for an early engagement with the Council to agree the approach to mitigation. It has suggested that whilst the SPA Delivery Framework states that SANG should be provided on the basis of 8 hectares per 1,000 population, due to the proposed size of the site and its proximity to the SPA, the avoidance and mitigation will need to be over and above this minimum quantum. There are a number of examples to draw lessons. The Council will initiate the engagement at the appropriate time and is confident that appropriate measures of mitigation would be agreed if the land is to be safeguarded and/or developed. The draft Site Allocations DPD proposes to allocate a number of sites for SANGs. Natural England has been consulted and they have not raised any objection in principle. The proposed SANGs would be the requirements for SANG designation. The Council does not accept that the SANG proposals in the draft Site Allocations DPD will not meet development needs and/or achieve their intended objectives.

3 There is no declared air quality management area in the vicinity of the Martyrs Lane site. The Council has robust policies to manage air quality impacts as a result of development. In particular, Policy DM6: Air and water quality of the Development Management Policies DPD sets out strict air quality standards for development to meet. There are other policies such as policies DM5, DM7 and DM8 of the development Management Policies DPD that would apply to manage other sources of pollution as a result of development. Officers are satisfied that if the site is to be safeguarded it can be delivered without unacceptable risk to air quality.

4 The Council is fully aware of local concerns about the existing traffic conditions on various transport routes including the Woodham Lane and takes those concerns seriously. In this regard, the Council has carried out the following separate studies to quantify and forecast vehicular trips that would be generated by various development options to enable the delivery of the Core Strategy and future development needs, and to help determine appropriate measures of mitigation to address the adverse impacts of proposed development:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development, including potential development at Martyrs Lane.

It is too simplistic to assume that the development of the six sites will not raise significant transport issues. The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concludes that the scale of the forecast highway impacts varies in each of the Green Belt development options tested. This is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios. It is important to stress that in this particular case the comparison would be between the development impacts of Martyrs Lane against the cumulative impacts of the six sites.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both sets of development options are expected to exacerbate the following same traffic hotspots:

A245 Woodham Lane/Sheerwater/Parvis Road;  
A320 Chertsey Road/Guildford Road; and  
B382 Old Woking Road.

The development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. The Council is also working in partnership with Surrey Heath and Runnymede Borough Councils and the County Council to quantify the cumulative transport impacts of developments in the three authorities, including developments at Longcross and Fair Oaks if the Martyrs Lane site is safeguarded. The outcome of the study will also help determine the strategic mitigation measures that might be needed to address the cumulative impacts. The Council accepts that the safeguarding proposals would lead to an increase in traffic as demonstrated by its own studies, and mitigation will be needed to address that. It is working with the relevant bodies to determine the appropriate mitigation measures to enable the sustainable delivery of the proposals.

5 The Council will make sure that the development of any safeguarded site is supported by the necessary infrastructure including education provision. The County Council has made representation to confirm that if the Martyrs Lane site is to be developed in the future, the expectation would be that a primary school should be provided on site. If the need is proven, it will be a key requirement for the development to provide a primary school on site. In this regard, the concern raised will be fully addressed.

6 It is not envisaged that the development of the site if it is safeguarded would be contrary to the provisions of the Natural Woking Strategy. The site can be developed without compromising the nearby Thames Basin Heaths Special Protection Area. Its safeguarding would not be contrary to Policies NRM6 of the South East Plan and CS8: Thames Basin Heath Special Protection Areas of the Core Strategy if sufficient SANG capacity could be identified to support the development and a contribution is made towards Strategic Access Management and Monitoring. Any mitigation will also take into account the proximity of the site to the designated SPA. The Council can demonstrate that sufficient land will be available to support the development. The Core Strategy has robust policies to make sure that harm to the SPA as a result of development is avoided, and this will apply to any future proposal for development. Policy CS7: Biodiversity and nature conservation is sufficiently robust to protect the ecological integrity of the site. Based on the above, the Council is satisfied that the site could be developed to be in conformity with the Natural Woking Strategy. This representation has also been comprehensively addressed in the Council's response to the Woodham and Horsell Neighbourhood Forum's representations (see Woodham and Horsell Neighbourhood Forum – Issues and Matters Topic Paper).

7 The Council recognises the contribution that the community recycling centre makes towards its objective to maximise recycling in the borough. Its retention on the land as part of the master planning of the site or the provision of a new facility at an enhanced location will be made a key requirement of the allocation of the site if it is allocated. The County Council who owns the facility is supportive of this approach, and will work with the Council to agree the most effective way of retaining the facility. The owner of the land safeguarded for minerals extraction has submitted a representation as part of the Martyrs Lane consultation, and has indicated support for the site to be safeguarded to meet future housing needs of the Council. In this regard, the land could be available for future housing needs subject to further discussion with the County Council on whether or not the site will continue to be needed for their future purposes. At this stage the County Council is unsure about the future need of the site for their purposes until further assessment is undertaken as part of the emerging Surrey Waste Local Plan. Officers will continue to liaise with the County Council on this matter, and are confident that a consensus would be reached.

8 Traditions in Pyrford and Sutton Green Golf Course have not been assessed as part of this process. The land east of Martyrs Lane has been assessed because parts of it had already been assessed as part of the Regulation 18 consultation. Given the changing circumstances at the McLaren site regarding the extant planning permission that could be revoked, there is justification to assess the prospect of a comprehensive development of the entire area.

9 It is important to highlighting that the Housing White Paper does not seek to change the direction of national policy as set out in the NPPF, and neither is it an in-principle new policy. It is only intended to clarify what the existing Green Belt policies mean in practice. Woking Borough Council had always understood the interpretation of the national policy on Green Belt and is already practicing what the White Paper is proposing and as such there will be no need to carry out any further work as suggested by the representation and no purpose will be served by stopping the Site Allocations DPD process. The White Paper itself goes at length to explain that there is no change in policy regarding Green Belt. The White Paper also has suggested compensatory improvements to the environmental quality or accessibility of the remaining Green Belt when Green Belt land is released. The Council has sought further clarification on what this would be in practice in its response to the consultation on the White Paper. Even that, the Council can demonstrate that it can and is meeting this particular requirement.

The NPPF and the White Paper both offers the same strict protection to the Green Belt. The principle that once established the Green Belt boundaries should only be altered in exceptional circumstances through the review of the Local Plan has not changed. The Council has rigorously applied this principle to underpin the preparation of the Core Strategy and the Site Allocations DPD.

A key factor that has mainly been taken into account to justify exceptional circumstances for releasing Green Belt land through the plan making process has been to demonstrate that alternative options have been fully considered, including a thorough assessment of the capacity of the urban area to accommodate projected development needs. The Strategic Housing Land Availability Assessment (SHLAA) and the Employment Land Review are evidence

to demonstrate the assessment of brownfield sites. Paragraph 159 of the NPPF requires Local Planning Authorities to prepare as evidence 'a strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period'. Generally and specifically in Woking, SHLAAs has mainly focused on urban sites, predominantly previously developed land and how their uses can be maximised.

The Core Strategy takes this principle fully on board. In particular, Policy CS1: A spatial strategy for Woking Borough of the Core Strategy and its reasoned justification seeks to maximise the use of brownfield land. The high indicative densities set out in Policy CS10: Housing provision and distribution of the Core Strategy also reflects this principle. There are therefore clear and strong policy framework to prioritise and support development on previously developed land at high densities subject to character and environmental considerations.

Planning decisions relating to development proposals in Woking Town Centre also rigorously applies this principle. The Victoria Square and Goldsworth Road approved proposals are good examples. The Victoria Square proposal is about 660dph. The proposed indicative densities for the proposals in the draft Site Allocations DPD also seeks to maximise the efficient use of urban land. The Sheerwater scheme is a classic example of how the Council is using urban regeneration to improve living and environmental conditions of the area as suggested in the White Paper. On the basis of this, the Council has done more than the White Paper requires, and does not need to do any further work in response to the White Paper.

The NPPF is clear about the need and the reasons for safeguarding sites to ensure the enduring permanence of the Green Belt boundary beyond the plan period. It would be unreasonable within this policy context to accurately predict the exact future housing requirement. Right, the projections are based on a thorough assessment of historical data and intelligent assumptions of future provision of housing. The assumptions are credible, acknowledging that an exact housing requirement could only be determined as part of the review of the Core Strategy, an up to date evidence at the time and appropriate scrutiny at an examination. The 2027 – 2040 housing provision of 1,200 dwellings is on the basis that the Council will continue to provide 292 dwellings per year.

For the 13 year period, this is estimated to be 3,796 dwellings. It is assumed that lower density development in the Green Belt of about 30dph will continue into the future. An intelligent assumption has been made that the urban area will continue to make a significant contribution towards housing supply during that period in line with the overall spatial strategy. The estimated projection is that the urban area will provide about 50% of the total supply of housing during that period. A marginal allowance has been made for windfall development, which will continue to come forward during that time. Historical estimates over 10 years suggest that about 40 dwellings per year will be delivered through this source. On the basis of the above the figure of 1,200 specified in the consultation document for which land is sought is a reasonable and realistic expectation of what would be accommodated on the safeguarded site(s).

10 The Council is aware that the Peter Brett's report did not recommend that Parcel 2 be released from the Green Belt. This is a material consideration that the Council will take into account when considering the representations to the consultation.

11 The Council is transparent about the conduct of its meetings and has published the Officers' advice on the safeguarding of the land east of Martyrs Lane. Both Officers and Members agreed that the consultation on the land east of Martyrs Lane was necessary and the representations that are received during the consultation will be source of relevant information to inform the subsequent stages of the Site Allocations DPD process. Whilst it is clear that the LDF Working Group did not accept the entire recommendations of Officers, it is clear from the Minutes of the meetings that they carefully considered the report before reaching their recommendations. The Working Group also had all the necessary evidence before them to inform their recommendations. Appropriate procedure is followed in this regard. The Council has not yet made any decision on the Officers report or the recommendations of the Working Group. It has rightly reserved its right and authority to do so after careful consideration of the representations received during the Martyrs Lane consultation. The request for further consultation was appropriate and justified to aid informed decision making. The Working Group is set up to scrutinise Officers reports and to make recommendations to the Council or other relevant decision making committees of the Council. The task and the action that the Working Group took regarding its recommendations on Martyrs Lane are therefore in line with its responsibilities. The Working Group provided reasons for their recommendations. Council as a decision making body is yet to make its decision before consulting on the Publication version of the Site Allocations DPD (Regulation 19). Councillor Bowes has also been transparent about his proposed amendment at the Working Group. There is nothing improper about his conduct in this regard. He provided clear reasons for his amendment and it will be up to the Council to judge whether or not the recommendations of the Working Group are rational. The fact Councillor Bowes is a Ward Councillor in a ward that Green Belt sites are proposed to be released should not be a reason to prevent him from participating in discussions about the Site Allocations DPD in an open and transparent manner, in particular, as the Working Group is only a scrutiny and an advisory group.

12 It is noted that the representation has come to different conclusions on some of the scorings in the sustainability appraisal. It is reasonable to expect that this could happen. The Council has used consistent and clear assumptions to inform the scoring and are satisfied of the scores.

13 The geographical extent of the land east of Martyrs Lane is defined by a Map and it includes the golf course. The Council had not specified which parts of the land will be used for what purpose. This is a decision that will broadly be informed by the representations to the consultation and in detail through a potential masterplanning of the land if it is safeguarded. The consultation document was also clear that the land should be capable of delivering at least 1,200 homes. This is necessary to justify it as an alternative to the six sites it seeks to replace. The Hankinson Duckett report has recommended that the development of Parcel A (north of the land) will lead to an isolated development in the Green Belt. The Council will take the information into account to inform its final decisions.

14 Runnymede Borough Council has made a separate representation regarding the duty to cooperate, which has been fully addressed. Officers strongly disagree with their assertion that the Council has not met its requirements for the duty to cooperate by not consulting Runnymede and the neighbouring authorities prior to the consultation. The claim is factually incorrect. The Council resolved to consult on the possibility of substituting the land east of Martyrs Lane for the six original safeguarded sites at its meeting on 20 October 2016. Runnymede Borough Council and the other neighbouring authorities were notified of the Council's decision soon after that on 24 October 2016. The Council had not previously considered this matter. The proposal was referred to Council for consideration by the LDF Working Group and the 20 October 2016 meeting was the first time the Council had considered the matter.

Runnymede Borough Council was once again invited on 28 October 2016 to send the Council any informal representations they may have and for them to be taken into account before the proposal was formally published for consultation. They were also offered an opportunity to meet to discuss the details of the proposal and the nature of the consultation. The Council met them to do so. The consultation started on 6 January 2017 for a period of six weeks, and they were formally consulted. The Council is satisfied that it has gone beyond the requirements of the duty to cooperate to reach out to the neighbouring authorities and to listen to any concerns they may have, and it is not correct to suggest that Runnymede was not adequately consulted. The Council understands that the duty to cooperate is a continuous process and has subsequently been engaging with Runnymede and Surrey Heath Borough Councils after the consultation period to establish a framework for joint working in the future. The above clearly demonstrates that the Council has positively engaged with Runnymede regarding this particular issue.

**Customer Name:** Mrs Molly Brown

**Summary of representation:**

Development in Pyrford would be a blot on the landscape.

The road infrastructure in the area would not cope with the additional traffic and result in congestion. The road is already dangerous by the school.

Martyrs Lane as a single site is a better option and would not inflict any more traffic through Byfleet and keep the local environment a safe place to live and enjoy.

**Officer Response:**

Support for the Martyrs Lane proposal and objection to development in Pyrford is noted.

The representation regarding the landscape impact of development as well as the provision of road infrastructure has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular Section 3.0 and 7.0.

In addition, the Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of

congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A245 corridor between Woodham Lane, Sheerwater and Parvis Road in addition to the A320 and B382 (Old Woking Road).

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination.

Regardless of the Council's preferred safeguarding option, it is expected that development will be supported by adequate infrastructure to minimise any social, environmental and infrastructure pressures in the area as a result of the development. Development will also be built to high environmental standards in accordance with the environmental/climate change requirements of the Core Strategy. Overall, the Council is satisfied that the social, environmental and economic character of the area will not be significantly undermined.

**Customer Name:** Ms Marion McAllister

**Summary of representation:**

Object to development on Green Belt in Pyrford.

Object to the principle of Green Belt development. If there is an aging population then the Green Belt should be enlarged nor reduced.

There should be more creative ideas rather than building houses on farmland. There should be far more incentive to utilise the rent a room scheme, by making it up to £15k tax free.

**Officer Response:**

The Council notes the objection to development on Green Belt land in Pyrford.

The representation regarding the principle of development, as well as the need to safeguard land for future development needs, has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular Sections 1.0 and 2.0.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites, including the possible land to the east of Martyrs Lane, are classified as high quality agricultural land by DEFRA.

Whilst the Council notes the representation regarding the rent a room scheme, it should be noted that this is not a planning matter. In addition it is not considered that such a scheme will meet the housing demand of the borough, which is clearly set out in the Topic Paper noted above as well as in the Strategic Housing Market Assessment. Whilst this type of scheme may provide some short term accommodation, it will also not provide the housing type and mix required in the borough, including family accommodation, specialist residential accommodation and affordable housing.

**Customer Name:** Ms Sarah Zone

**Summary of representation:**

Traffic is already appalling and further development will make the situation worse. The schools, doctors and dentists are also at capacity. Where will the new residents go? Without infrastructure provision the whole area will be adversely affected.

**Officer Response:**

The Council has addressed the representations relating to infrastructure provision and traffic in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02205/1/001  
**Customer Name:** Mr Brian Shreeve

**Summary of representation:**

Support for the Martyrs Lane proposal.

Only the northern half of the Martyr's Lane site would be required to satisfy the requirements to deliver the 1024 homes and no building would be required on New Zealand Golf Club land.

The site is already partly developed and somewhat derelict unlike the Pyrford sites which have been farmed for many years and still provides cereal crops.

There are no known footpaths on the Martyrs Lane land and the site is better connected to Woking town centre and to major commuter routes via the M25 than the Pyrford sites.

The Green Belt boundary review considered the Pyrford sites to be of major environmental constraint, whereas the Martyr's Lane land was considered to be of minor environmental constraint. Therefore the Martyrs Lane land should be chosen in preference to that in Pyrford for the new housing development.

Affordable housing could be provided for staff at the local major employers.

The Pyrford school is at capacity and the Martyrs Land site could include a new school.

Access to the site could be secured at the McLaren Roundabout on the A320.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste

safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Three areas of land within the site had been promoted to the Council previously and were all assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion.

As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the

amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

**Contributor Reference:** 02207/1/001  
**Customer Name:** Ms Belinda Barrett

**Summary of representation:**

Strongly support the Martyrs Lane proposal. It would allow the required infrastructure to be developed accordingly such as a school and health centre. The A320 could be widened to the M25 to support additional traffic and to provide public transport between St Peters Hospital, Chertsey and Woking town centre. It may also be possible to divert the railway to include a station between Woking and West Byfleet.

Object to development in Pyrford. The school is at capacity and additional development would require an additional school. The roads in Pyrford are narrow and congested at peak times and they can not be widened. They are also dangerous.

There is a lack of parking in the village for the school and a lack of public transport.

Access to the A3 and M25 is heavily utilised from all directions. Medical facilities in West Byfleet are also at capacity.

If more housing is needed then it makes sense to create a purpose built village or town and plan for the services that are needed to support it rather than trying to fit them in retrospectively.

**Officer Response:**

Support for the Martyrs Lane site and objection to development in Pyrford is noted.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Regarding the suggestion of re-routing the railway line and the provision of a new station to serve the development, the Council has not previously identified this significant infrastructure project in the Infrastructure Delivery Plan (IDP). Nevertheless the Council will bring the suggestion to the attention of Network Rail for their consideration.

The representation outlining reasons against development in Pyrford, including matters on traffic and congestion, infrastructure provision and public transport have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02210/1/001  
**Customer Name:** Mr Jon Blundell

**Summary of representation:**

The land to the east of Martyrs Lane is important Green Belt land and should not be developed. Once built on it would be lost for future generations.

**Officer Response:**

The Council has addressed the representation regarding the important contribution the site makes in terms of Green Belt purposes in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 02213/1/001  
**Customer Name:** Mr David Rousham

**Summary of representation:**

Objects to development on Green Belt land in Pyrford. The infrastructure in terms of transport and education provision are already at capacity and development would make the situation worse. This area is an outstanding area of natural beauty housing much wildlife.

The Martyrs Lane site excluding the New Zealand Golf Course is brownfield and has the capacity to develop its own infrastructure to support development. This is a more sensible approach. Support this proposal.

**Officer Response:**

Objection to development in Pyrford and support for the Martyrs Lane proposal is noted.

The representation regarding reasons to not develop in Pyrford, including infrastructure provision, impact on wildlife and landscape have been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using

its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

**Contributor Reference:** 00358/2/001  
**Customer Name:** Ms Katey Grant

**Summary of representation:**

Support the proposed allocation of Martyrs Lane despite it being Green Belt land.

The proposal should include 1,024 dwellings but exclude building on the New Zealand Golf Course.

The key reasons are:-

The top part of the site was recently granted planning permission.

There is currently no public access to the land.

A single site would provide some economies of scale to provide some alleviation towards all the infrastructure issues that will arise from building more homes – more affordable homes, schools possibly social housing, doctor surgeries, traffic volumes, waste water etc.

The northern part of the site is well served with public transport unlike the other six sites and has access on to the A320 via a roundabout with its direct road links to M25 and to Woking town centre

The northern part of the site is close to major local employers

Much of the northern site has already been used for non-agricultural purposes

Part of the northern site is publicly owned land so the sale would help council tax payers

Fewer residents of Woking would be impacted with one site in the northern part than by six individual sites.

**Officer Response:**

Support for the Martyrs Lane proposal is noted.

Regarding the need to release Green Belt land for development needs, this has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 1.0 and 2.0.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst the representation notes that the New Zealand Golf Course should be retained, it should be noted that as part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient

land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based on the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the

Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not used for agricultural purposes, the same can be said for the majority of the six original sites proposed to be safeguarded. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02192/1/001  
**Customer Name:** Mr Colin Cross

**Summary of representation:**

Agrees to the possibility of substituting the land to the east of Martyrs Lane for the safeguarded sites identified in the draft Site Allocations DPD.

Object to the two Pyrford sites being included in the consultation.

The impact of development in Pyrford along with development in other nearby areas such as Ripley will add to the existing issue of congestion.

Development will also add to the current excessive strain on all roads in the area, schools, trains and health services.

The fields play a critical role in protecting the Green Belt and the rural character and landscape will be totally changed if they are developed.

**Officer Response:**

Support for the Martyrs Lane site and objection to the safeguarding of Green Belt land in Pyrford is noted.

The representation highlighting reasons against development in Pyrford, namely traffic and congestion, the purposes of Green Belt, the impact on landscape and character as well as the provision of infrastructure has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper.

These matters will weigh in the balance of considerations by Members.

**Contributor Reference:** 02195/1/001  
**Customer Name:** Ms Alison Jones

**Summary of representation:**

Objects to the Martyrs Lane proposal on the basis of loss of green belt land, flood risk, pressure on transport, lack of public transport, too much stress of current infrastructure as well as the loss of woodland and wildlife.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

Regarding the representation relating to the loss of Green Belt land, in the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs has already been established in the Core Strategy and is consistent with national policy. This has been addressed in further detail in the Regulation 18 consultation Issues and Matters Topic Paper, in particular Section 1.0 and 2.0.

The representation regarding flood risk, transport and public transport as well as wider infrastructure provision has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. The representation regarding the loss of woodland and wildlife is also addressed in this paper.

**Contributor Reference:** 02208/1/001  
**Customer Name:** Mr Roy Butcher

**Summary of representation:**

Support for the Martyrs Lane proposal.

Martyrs Lane offers economies of scale, resulting in lower planning permission, infrastructure and build costs. This in turn will result in lower house prices enabling the objective of affordable housing. It will also be more economical to provide services and facilities such as shops, recreational areas, social and health facilities. It would be possible to build a community within the development.

The site offers vastly better transport links by both public and private transport. The other six sites are in locations where the road network is at capacity. Development in West Byfleet will only add to this congestion. They also have limited bus services. Martyrs Lane has a daily bus service plus a cycle track. There is also local access to the M25.

There are three major employers within walking distance of Martyrs Lane.

Whilst the site is within the Green Belt, it is not pristine land with any heritage or wildlife value.

Understand that there are willing landowners who will sell for development purposes and that some of the land is owned by Surrey County Council. Therefore there are no purchasing problems. New Zealand Golf Course would not be affected by any development.

The Green Belt sites in Pyrford have significant value in terms of location, recreation, heritage and wildlife. They are virgin Green Belt and developing on them will reduce the barrier between existing properties and the countryside. This will lead to urban sprawl. A public enquiry during the 1980s confirmed that these fields should not be released for development. Given the number of new dwellings which are required, there is no justification in removing valuable quality green belt from the enjoyment of the population.

**Officer Response:**

Support for the Martyrs Lane proposal and objection to development in Pyrford is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of a significant number of new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of

this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of

development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

Regarding the representation on the landscape quality of the Martyrs Lane site, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

Regarding the representation on wildlife, the land is not covered by any absolute environmental constraints and any development constraints on the site will be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be identified and protected.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. The land in public ownership includes grass verges and the Martyrs Lane Recycling Centre.

The representation outlining reasons against development in Pyrford have been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. Specifically the representation referring to road infrastructure, recreation and well-being, heritage, wildlife and urban sprawl.

Whilst historically these two sites may have not been allocated for development, the Council is fully committed to the comprehensive delivery of the Core Strategy. It is also preparing the Site Allocations DPD in accordance with national planning policy. In order to deliver the Core Strategy and plan for long term development needs, the Council has prepared a number of evidence base documents to inform its Site Allocations DPD. This includes the Green Belt boundary review, the Landscape Character Assessment, the Strategic Highway Assessment and a Sustainability Appraisal which assessed about 125 sites in total. These evidence base documents are on the Council's website. The purpose of the Martyrs Lane consultation is to ensure that the Council identifies the most sustainable sites when compared against all other reasonable alternatives and that this decision is based on robust evidence.

**Contributor Reference:** 02215/1/001  
**Customer Name:** Ms Leticia Lopez De Blundell

**Summary of representation:**

It is important green belt land that will be lost forever.

**Officer Response:**

The Council accepts that any land taken out of the Green belt will lead to a reduction of the amount of Green Belt land and the benefits it brings to the particular communities where the land is situated. Whilst the Council sympathises with this concern, it has to ensure that any land that is released from the Green Belt will not undermine its overall purpose and integrity. Whilst not underplaying the significance of the benefits of Green Belt land to individual local communities, the overall total of Green belt land proposed to be released for development up to 2040 is about 3.5%. The amount of land being proposed to be released is therefore relatively modest.

**Contributor Reference:** 02217/1/001  
**Customer Name:** Ms Francesca Gaskin

**Summary of representation:**

Objects to development in Pyrford and supports proposals for Martyrs Lane.

The land in Martyrs Lane has limited public access and much less historical importance than the land in Pyrford where the footpaths and scenic countryside are frequently used.

The Green Belt boundary review stated that Parcel 9 (which includes the two fields in Pyrford) has very low suitability for removal from the green belt. This category is described as land fundamental to the green belt.

The land in the Martyrs lane proposal has been previously built on and land was recently approved for McLaren to build a factory on the site. Land is also currently owned by Surrey County Council.

The Martyrs Lane development would be located on a single site which is less costly and far less disruptive than developing 6 separate sites across the Borough.

A single site will enable infrastructure to be built into the development without the problems associated with implementing services across six separate sites.

**Officer Response:**

Support for the Martyrs Lane proposal and objection to development in Pyrford is noted.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by heritage constraints that would make development entirely unacceptable and or that could not be mitigated. The Core Strategy and the Development Management Policies DPD includes robust policies to protect heritage features within and in close proximity to any of the sites being consulted. If any of the sites were to be safeguarded, the Council has robust policies to make sure that their development does not compromise the heritage assets of the area.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered. The Council notes the locational advantages of the Martyrs Lane site. The merits of the original six sites have already been given in the Officer's response to the Regulation 18 consultation Issues and Matters Topic Paper. These merits will be analysed to inform the Council's preferred approach to safeguarding.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst some of the land within the site is publicly owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. Land in public ownership includes the Martyrs Lane Recycling Centre and grass verges.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The representation regarding the landscape quality of the fields in Pyrford has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper.

**Contributor Reference:** 02220/1/001  
**Customer Name:** Ms Zoe Williams

**Summary of representation:**

The proposal will result in the loss of green belt land and cause considerable traffic problems on a road out of Woking that is already at capacity. This will be to the detriment of the environment.

**Officer Response:**

In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national planning policy. This is set out in further detail in the Regulation 18 consultation Issues and Matters Topic Paper.

The purpose of the Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding strategy and that the sites selected for safeguarding will not undermine the purpose and integrity of the Green Belt.

The environmental implications of any of the sites identified for development will be fully assessed as part of the development management process, and appropriately mitigated. There are environmental standards for development to achieve and the Council will make sure that they are met. For example, policies DM5 to DM8 of the Development Management Policies DPD require development to be designed to avoid unacceptable impacts on the quality of life of communities from noise, light and environmental pollution. These would be considered at the Development Management stage.

**Contributor Reference:** 02226/1/001

**Customer Name:** Bryn Lewis

**Summary of representation:**

The proposal does not make provision for any infrastructure such as education and healthcare provision. There is no joined up approach to the impact of development on infrastructure.

It only suggests that people could drive to places nearby.

If these issues can be addressed then the site could be suitable.

**Officer Response:**

The representation regarding the provision of infrastructure and the promotion of car travel has been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 00543/3/001  
**Customer Name:** Mr Peter Graves

**Summary of representation:**

Concerned that the Martyrs Lane site was held back from the Regulation 18 consultation and that the Council is unable to explain why this is the case.

Land in Pyrford has been designated as unsuitable for release from the Green Belt.

Martyrs Lane is suitable as the top part of the site has recently been granted planning permission, there is no public right of access to the site, a single site would provide some economies of scale towards infrastructure provision and affordable housing, it has access to the A320 at a roundabout and onto the M25 and Woking town centre, it is in close proximity to major employers and is used for non-agricultural purposes.

The northern part of the site is in public ownership and the sale of the land would benefit Council Tax payers.

Fewer residents will be impacted with one site than the six original sites.

Green Belt in Pyrford should be protected.

**Officer Response:**

Parcels of land within the Martyrs Lane site that had previously been promoted through the Strategic Housing Land Availability Assessment (SHLAA) were all comprehensively assessed as part of the Sustainability Appraisal of the draft Site Allocations DPD. The SA is on the Council's website. The sites that were specifically assessed are:

- o Woodham Court (SHLAAHEW006);
- o Land to the east of Martyrs Lane (waste safeguarded site) (SHLAAHEW027); and
- o Land adjacent to 462 Woodham Lane (SHLAAHEW016).

They were all ruled out in part because their development would lead to isolated development in the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

In addition, at the time the Regulation 18 version of the draft Site Allocations DPD was published, the McLaren planning permission had not been revoked and it was considered likely that the scheme would be implemented. It would therefore have been unreasonable for the Council to allocate the site for future residential development when there was a recent and live planning consent for employment uses on the land. Taking this and the assessment carried out

as part of the Sustainability Appraisal into account, it is incorrect for the representation to suggest that the land north of the Golf Course was originally overlooked as part of the preparation of the Site Allocations DPD.

It should be noted that the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after considering all the development and environmental constraints within the borough. Detailed analysis and reasons for this recommendation are set out in the report.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Neither the land east of Martyrs Lane nor the six safeguarded sites are covered by constraints that would make development entirely unacceptable and or that could not be mitigated.

It is acknowledged that part of the site was granted planning consent for employment uses and it is accepted that the planning decision and the planning history of the site is a material consideration that needs to be taken into account. Nevertheless, it is highlighted that the determination of a planning application is a distinct planning process different from a Site Allocations DPD process. The Site Allocations DPD process and the question for the Martyrs Lane consultation in particular are in an entirely different context whereby the relative merits of alternative sites are being considered across the entire plan area. This is different from a development management process that seeks to determine a planning application based of the individual merits of the particular proposal.

Whilst there may be limited public access to much of the Martyrs Lane site, the Council has to make sure that any land removed from the Green Belt will not undermine its overall purpose and integrity. Whilst some Green Belt land offers benefits to local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet future development needs is about 3.5% of the borough's total Green Belt area and therefore the amount proposed to be released is relatively modest. The overall purpose of this consultation is to inform the Council's decision on ensuring that the most sustainable sites are identified for its preferred approach to safeguarding.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16:

Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion along the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the

implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

Whilst it is correct that the site is not currently used for agricultural purposes, this can also be said for the majority of the original six sites identified in the draft Site Allocations DPD. As part of the site selection process, the Council ruled out potential development on land classified as being of high agricultural quality. None of the proposed safeguarded sites are classified as high quality agricultural land by DEFRA. There is therefore no clear advantage between the Martyrs Lane site and the original six sites on this matter.

Whilst some of the land within the site is publically owned land, this makes up less than 1% of the total site area and therefore does not make up a significant proportion of the site. Most of the public owned land includes the Martyrs Lane Recycling Centre and grass verges.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

**Contributor Reference:** 02186/1/001  
**Customer Name:** Mr Ian Marchant

**Summary of representation:**

Object to the Martyrs land proposal on the basis of;

It would result in the loss of a large area of green belt land

Increased flood risk in this low area

Pressure on transport and a lack of public transport

Loss of woodland and wildlife.

Development would place too much stress on existing infrastructure. Local facilities are never improved/expanded when large developments like this are approved.

**Officer Response:**

Objection to the Martyrs Lane proposal is noted.

The Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land in the borough. Whilst the Council sympathises with this concern, the overriding consideration is that any land release from the Green Belt is the most sustainable when compared against other reasonable alternatives and that it will not undermine the overall purpose and integrity of the Green Belt. Whilst not underplaying the significance of the benefits of Green Belt land to individual local communities, the overall total of Green Belt land proposed to be released from the Green Belt to meet development needs up to 2040 is about 3.5% of the total area of the Green Belt. The amount of land being proposed to be released is therefore relatively modest.

The other issues raised in the representation have been addressed by the Council in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper.

**Contributor Reference:** 00865/2/001  
**Customer Name:** Mr Matt Martin

**Summary of representation:**

The local area is unable to cope with extra population from an infrastructure perspective. Commuter transport from Woking to London is also at capacity.

**Officer Response:**

These issues have been addressed in the Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper

**Contributor Reference:** 02160/1/001

**Customer Name:** Mr Guy Grant

**Summary of representation:**

Supports the Martyrs Lane proposal and that the Pyrford sites should be protected.

One larger site of 1024 dwellings would provide economies of scale, making it easier and cheaper to resolve infrastructure provision when compared against six sites spread across the borough.

Fewer residents would be impacted by traffic disruption.

Land values of northern sites are much less than the 6 original sites suggested and this facilitate the provision of Affordable Housing. Housing in Pyrford is expensive and more executive homes will not provide key worker dwellings needed.

There are three large employers close by the Martyrs Lane site. St Peters Hospital needs affordable housing for its workers and there is a bus that connects the hospital to the site.

Current plans for development in West Byfleet means that the Pyrford/West Byfleet area has more than enough development taking place already.

Surrey County Council studies show that 900 dwellings at Martyrs Lane will have less impact on traffic conditions than the development proposals in Mayford or the combination of developments proposed for Byfleet and Pyrford. Martyrs Lane would alleviate congestion in West Byfleet from traffic emanating from the 6 separate sites across Woking.

The Martyrs Lane site has the benefit of main road links to Woking, Chertsey and the M25. Roads in Byfleet and Pyrford are only B or C roads. The traffic flow on the A245 through West Byfleet is at capacity.

The existing roundabout at the northern end of Martyrs Lane would enable easy access for both development and resident vehicles to the A320.

West Byfleet Health Centre and Pyrford school are at capacity and the Martyrs Lane site offers the opportunity to develop new facilities.

Martyr's lane already has better bus services than other sites.

Please vote in favour of the Martyrs Lane site.

## Officer Response:

Support for the Martyrs Lane site for future development needs and objection to development in Pырford is noted.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

Whilst it is agreed that the site is of a significant size, it should be noted that as part of the consultation exercise, McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct

result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- o A245 Woodham Lane/Sheerwater/Parvis Road;
- o A320 Chertsey Road/Guildford Road; and
- o B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport

Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

**Customer Name:** Mr Terry Chubb

**Summary of representation:**

Any Green Belt land developed on will be lost forever. The urban sprawl over Middlesex is an example of how important the Green Belt is to the environment and to the inheritance to future generations.

Recognize the need for more affordable housing in the borough. Green Belt is preferred by developers due to the lower development costs. Would it be possible to stipulate that greenfield sites can only be developed for affordable housing, such as small two bedroom houses with outdoor and recreation space. Brownfield sites can then be used for more expensive housing to justify the higher development costs.

Under the current proposals the Byfleets, Pyrford and Mayford seem to be taking most of the new development. This should be shared across the borough. The current allocations may well influence future council elections.

Whilst it may not be a legally valid reason for objecting, the impact of development on infrastructure such as schools and traffic will make the situation worse and will effect the response of the people who respond to the consultation.

**Officer Response:**

As set out in Section 21.0 of the Regulation 18 consultation Issues and Matters Topic Paper, the Council accepts that any land taken out of the Green Belt will lead to a reduction of the amount of Green Belt land and the benefits it brings to the local community. The Council is of the opinion that the case for releasing Green Belt land, including safeguarding land to meet future development needs, has already been established in the Core Strategy and is consistent with national planning policy.

The overriding objective of the Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding strategy to ensure that the most sustainable sites are identified when compared against all other reasonable alternatives.

The Core Strategy has an Affordable Housing policy (Policy CS12: Affordable Housing) that will apply to development at Martyrs Lane and the six other sites irrespective of their land values. The Council has carried out a viability assessment as part of the preparation of the Core Strategy and the Community Infrastructure Levy. Residential development at any of the safeguarded options should be able to meet the Affordable Housing requirements in full and still achieve positive viability. In this particular regard, there are no perceived relative advantages over each other.

The Core Strategy and Development Management Policies DPD also contain policies to ensure that adequate private outdoor amenity space is provided for residential development. This is also set out in detail in the Outlook, Amenity, Privacy and Outlook SPD. The Core Strategy in particular also contains policy requirements for the provision of outdoor communal play areas. These matters would be considered in detail at the Development Management stage.

Regarding the representation relating to the location of development, it should be noted that the draft Site Allocations DPD includes over 70 sites across the borough for development. The majority of these sites are located within the existing centres of Woking and West Byfleet as these are the most sustainable locations within the borough. As part of this work the Council had comprehensively assessed about 125 sites before it published the draft document in 2015. The Site Allocations DPD has also been informed by evidence base documents including the Green Belt boundary review, Landscape Character Assessment and Strategic Transport Assessments. Based on the Council's evidence, the proposed sites are the most sustainable when compared to all other reasonable alternatives.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

**Customer Name:** Jo Clayton

**Summary of representation:**

Support for the Martyrs Lane proposal.

Developing one site makes more sense as it is previously developed rather than being a green field site. It would also allow for the provision of infrastructure to be put in place.

It would minimise disruption to the borough, offer economies of scale and be better connected to the town centre and the M25.

**Officer Response:**

Support for the Martyrs Lane site is noted.

The merits of Martyrs Lane site relating to developing a single site are noted and will weigh in the balance of considerations by Members. Nevertheless the Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

In addition, the Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

The representation regarding disruption to existing communities is a matter that has been addressed in the Regulation 18 consultation Issues and Matters Topic Paper. In addition, development impacts such as the impact of construction and construction traffic as well as the impact on existing services, facilities and infrastructure will be fully considered at the Development Management stage. This assessment will be required regardless of whether the Council safeguards land to the east of Martyrs Lane or the other six sites.

It is correct that some of the land within the Martyrs Lane site contains existing structures and buildings. These include sports facilities, agricultural buildings and residential properties. Nevertheless the site is washed over by the Green Belt and the same exceptional circumstance test will equally apply as it will with the original six sites. The overriding consideration is identifying the most sustainable location for future development when compared against all other reasonable alternatives and not whether the land has been previously developed. Whilst it is a material consideration, it's not the primary one and is one of many material considerations to be considered.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- o Transport Assessment (2010);
- o Cumulative assessment of future development impacts on the highway network (2011);
- o Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- o Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor between Woking town centre and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

**Summary of representation:**

One large development will have a significant negative impact on the local environment as well as lead to the loss of Green Belt. It will also put pressure on transport and local infrastructure which is already at capacity.

Development will result in urban sprawl and the loss of wildlife. This is a terrible proposal and will have too much of a negative impact.

**Officer Response:**

Objection to the proposal is noted.

The principle of Green Belt development, including safeguarding land for future development needs, has been addressed by the Council in the Regulation 18 consultation Issues and Matters Topic Paper. In particular Section 1.0 and 2.0.

The representation regarding the impact of development on the Green Belt at Martyrs Lane and the urban sprawl which could result from the development of the site, has been addressed in the Council's Woodham and Horsell Neighbourhood Forum Issues and Response Topic Paper. The representation relating to traffic and congestion as well as woodland has also been addressed in this paper.

To ensure sustainable development, the Council is always concerned to make sure that development is supported by the necessary social, physical and green infrastructure, and would agree that a development of this nature and scale will require different types of supporting infrastructure to be sustainable. There are two stages for identifying the nature and extent of the infrastructure that will be needed. The first is during the plan making stage and the second through the development management process. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website. These studies have or are being reviewed to bring them up to date. At the development management stage, detailed impact assessment of specific proposals will be fully assessed to help determine site specific measures of mitigation that might be necessary. Contributions under Section 106 Agreement will be secured to deliver these site specific measures.

The Council's Infrastructure Delivery Plan (IDP) and the Surrey Infrastructure Study provide useful information in quantifying the nature and type of infrastructure needed to support the future growth of the area and the likely cost of providing them. Both studies are on the Council's website and are presently being reviewed to bring them up to date. CIL and S106 contributions will provide significant funding for the infrastructure necessary to support the

development of the site and indeed for the development of any of the other proposed six safeguarded sites. However, it has always been very clear to the Council that infrastructure funding has never been and cannot be met entirely by developer contributions. Public sector contributions have and will always be a significant part of infrastructure funding, and the Council works tirelessly with relevant agencies to secure public sector and other sources of funding for infrastructure projects. For example, the CIL Charging Schedule identifies the priority infrastructure to support the delivery of the Core Strategy, how much it will cost, how much of the funding will met from developer contributions and how much is expected to be secured from public sector sources. This gives an indication of the scale of public sector funding expected to help deliver the identified infrastructure.

Regarding the representation on wildlife it should be noted that the land is not covered by any absolute environmental constraints. The development constraints on the site can be fully assessed and appropriate mitigation put in place to address any potential adverse impacts. The land is not a designated Special Protection Area, Special Area of Conservation, Sites of Special Scientific Interest or common land.

The land could be wildlife rich, and the Council will make it an essential requirement for it to be fully assessed by requesting any development proposal to be accompanied by a landscape assessment, ecological survey and tree survey to determine the levels of biodiversity and valuable landscape features on the site and for the design of any proposal to have regard to biodiversity opportunities on the site. This would include matters such as TPOs, woodland and Biodiversity Opportunity Areas. The Council will also require that the design of any development builds in wildlife features and corridors to enhance biodiversity where feasible. These requirements would apply to any of the Green Belt sites that the Council decides to safeguard.

The Core Strategy and the Development Management Policies DPD contains robust policies to make sure that important trees and biodiversity are protected as part of any future development. Particular reference is made to Policies CS7: Biodiversity and nature conservation, CS8: Thames Basin Heaths Special Protection Areas, CS21: Design, CS24: Woking's landscape and townscape of the Core Strategy and Policy DM2: Trees and landscaping of the Development Management Policies DPD.

Environmental organisations such as Natural England, Environment Agency and Surrey Wildlife Trust have all been consulted and their representations will be taken into account to inform decisions about the preferred approach to safeguarding and how the potential ecological integrity of the land can be protected.

Whilst the representation is not supportive of the consultation proposal, the overriding objective of the consultation is to obtain information and evidence from consultees, stakeholders and the wider public to inform the Council's decision on its preferred safeguarding strategy. As part of this decision making process, the Council has to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternatives.

**Customer Name:** Mr Ronald Brandman

**Summary of representation:**

The land to the east of Martyrs Lane is preferred over the six original sites. Note that the earlier sites were never adopted by the Council due to considerable public opposition and a very flawed process.

The Martyrs Lane site is close to major employers. It is roughly midway between West Byfleet Station and Woking Station and also has excellent access to the M25 on good roads.

**Officer Response:**

Support for the Martyrs Lane site is noted.

It is factually correct that the previous sites set out in the draft Site Allocations DPD were never adopted by the Council. The Council is currently in the process of preparing its Site Allocations DPD. The original proposed sites were set out in the Regulation 18 version of the document which is one of the initial formal stages of the plan making process. The purpose of this consultation is to inform the Council's decision on its preferred safeguarding option for the Regulation 19 consultation and subsequent examination.

The Council does not consider the Regulation 18 consultation to have been flawed as suggested in the representation and believes it has complied with both its Statement of Community Involvement (SCI) as well as the Town and Country Planning (Local Planning) (England) Regulations 2012. This has been addressed in further detail in Section 6.0 of the Regulation 18 consultation Issues and Matters Topic Paper.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);

- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion on the A320 corridor between Woking and the M25.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be

relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Whilst the site could result in the an efficient use of land when compared to the other sites, the overriding consideration for the Council is to identify the most sustainable location for future development when compared against all other reasonable alternatives.

Regarding the representation on defensible Green Belt boundaries, it should be noted that the Green Belt boundary review assessed this site and concluded that the removal of any part of the land would result in an area of development unconnected to the urban area and is therefore not recommended for removal from the Green Belt. The Council's latest evidence carried out by Hankinson Duckett, which also looked at the northern part of the land came to a similar conclusion. The study concluded that the part of the land north of the Golf Course even with the proposed McLaren extension revoked would be too isolated to be a standalone development.

**Customer Name:** Ms Angela Jones

**Summary of representation:**

Object to development in Saunders Lane, Mayford. There is enough Brownfield land in the borough to meet the housing needs until at least 2040 without using any of the Green Belt.

Understand that there was significant objection to the Regulation 18 consultation for development in Mayford. Objections submitted at this stage still apply now.

Understand that the Council is consulting on Martyrs Lane on the basis that it would be substituted for the other six sites for development between 2027 and 2040.

Protect Mayford and its Green Belt from development.

Regarding Martyrs Lane:

The site is big enough (112 hectares) to accommodate 1,200 houses, including affordable housing, one or more Gypsy and Traveller sites, and the necessary infrastructure of shops, primary schools, health centre development.

There are advantages in the creation of a single new larger housing estate rather than several dispersed small ones.

It is close to the development at Sheerwater where much of the design and infrastructure work has already taken place.

It will simplify the process for obtaining planning permission which would be good value for money and a more efficient use of public funds.

There are major employers close by. A new neighbourhood centre on the site would subsequently provide additional employment opportunities.

The A320 gives easy access to the M25 and Heathrow Airport to the north, and to Woking Town Centre and the mainline railway station to the South. Bus routes and cycle routes exist already. There is little development along the A320 North of Woking, making road widening relatively easy if necessary. The A320 in south Woking is already at capacity.

It has no other National or Local landscape designation unlike some of the other proposals.

Most of the Martyrs Lane site is clear of Flood 2 and Flood 3 designations which should make the planning and development process simpler and more cost effective.

North of the New Zealand golf course the land is largely disused and derelict and planning permission has previously been given for McLaren to build a technical centre on part of the site. There is therefore a presumption that the land is suitable for development.

Master planning of the total residential development would allow for the provision of Affordable Housing which the Council is not currently meeting. It would also allow for Specialist Residential Accommodation.

Martyrs Lane could be used to provide pitches for Gypsies and Travellers wanting to live to the East of Woking as all existing sites are in south Woking. The site would satisfy the requirements of CS14 and result in Ten Acre Farm being removed from the Site Allocations DPD.

Because of the size of the Martyrs Lane area – it is almost twice the size as the six sites it might replace – it should be possible to build all the properties necessary to fulfil Woking's future Housing and Traveller needs, even if it subsequently turns out that more than 1,200 houses are needed, or if there is a further requirement post 2040.

A decision to build in Martyrs Lane site makes sense in terms of the redevelopment of Sheerwater. The Sheerwater development should produce a huge positive impact on the local area and further development in the close proximity will have cost efficient benefits also.

Development in Mayford would result in the destruction of wildlife, natural heath land and Green Belt that provides the 'lungs' for Woking.

It would also increase traffic, pollution and associated risk factors which are not acceptable.

#### **Officer Response:**

Objection to development in Mayford and support for the Martyrs Lane site is noted.

In the opinion of the Council, the case for releasing Green Belt land, including safeguarding land to meet future development needs has already been established and is consistent with national planning policy. This is based on the Council's evidence base that was used to inform the Core Strategy. This is been addressed further in the Regulation 18 consultation Issues and Matters Topic Paper.

It is correct that the Council received a significant number of representations to the Regulation 18 consultation. It should be noted that the representations received commented on the majority of the 75 sites proposed in the draft Site Allocations DPD and did not just refer to the proposed sites in Mayford.

The purpose of the Land to the east of Martyrs Lane consultation is to inform the Council's decision on its preferred safeguarding option. All of the representations received from this current consultation will be considered by the Council in making its decision.

It is acknowledged that the site as a whole is of sufficient size to enable the delivery of 1200 new homes. Cumulatively it is also true that the original six sites could deliver a similar amount of new homes. A number of the merits and development impacts at Martyrs Lane set out in the representation are broadly similar to the other sites.

As part of the consultation exercise McLaren have made representations to confirm that their land holdings will not be made available for any other use except for the purposes of meeting their future aspirations to expand. McLaren wants its land to be allocated as a strategic employment site to meet its specific future development needs. Zealand Golf Course has also confirmed that the Golf Course will not be made available for safeguarding to meet future development needs as envisaged in the consultation. Assuming the New Zealand Golf Course and the land in ownership of McLaren are unavailable there will only be sufficient land to enable the delivery of about 600 dwellings. This assumes that Surrey County Council's waste safeguarded site will be available to meet future development needs. Without the waste safeguarded site there would only be sufficient land to enable the delivery of about 300 dwellings. These estimates are based on 30dph, and it takes into account other constraints on the land such as the Ancient Woodland and areas at risk of flooding. Without the Council using its Compulsory Purchase Powers to acquire land, it would be unrealistic to assume that the residual land will be capable of delivering 1,200 new homes. For information, the County Council has also made representation. At this stage, they would like to retain the safeguarding policy covering the waste and minerals safeguarded site until the review of the Plan has identified how much of the land will be needed to meet their future needs.

The Council will make sure that the development of any land that it safeguards is supported by adequate and necessary infrastructure. This will be the case irrespective of whether it is a single site or multiple sites. The Council's Core Strategy, in particular Policy CS16: Infrastructure Delivery and CS18: Transport and accessibility, sets out how the necessary infrastructure will be delivered to support development. As part of the plan making process, the Council has carried out a number of studies to quantify the broad nature and type of infrastructure that will be needed to enable the delivery of the Core Strategy. An example is the Infrastructure Delivery Plan which is available on the Council's website.

The Council has adopted the community infrastructure levy (CIL) as the primary means of securing developer contributions towards infrastructure provision. By this approach, the Council determines the list of projects and the priority order that it wishes to use CIL contributions. This will include infrastructure to support the development of any of the safeguarded land. Section 106 contributions will only be secured towards infrastructure that is specifically necessary to bring forward the development of a particular site. Generally, the Council will seek to make sure that the implications of development where they occur are fully assessed and measures of mitigation put in place to address or minimise the impacts.

It should be noted that the original six safeguarded sites were selected as they were within reasonable proximity to existing local services and facilities, such as shops, schools and health centres, as evidenced in the Sustainability Appraisal.

The Council will identify the necessary resources to determine any planning application that would be submitted whether it is a single application or multiple applications. The Council has the resources and expertise to determine planning applications. The overriding objective of this particular exercise and at this particular stage is to make sure that any land that is safeguarded is the most sustainable when compared against other reasonable alternative.

It should be noted that the land to the east of Martyrs Lane is not developer led unlike the other six sites identified in the draft Site Allocations DPD. Therefore should the Council decide to safeguard Martyrs Lane for future development needs, it may be required to facilitate the delivery of the site by using its Compulsory Purchase Powers, as set out above.

If the Council were to decide to safeguard this site, its development will take into account any development proposals in the vicinity of the site, including the regeneration proposals at Sheerwater.

It is accepted that the land east of Martyrs Lane is in close proximity to major employers. Nevertheless policy CS1 of the Core Strategy sets out the overall spatial strategy that seeks to manage development at key locations that are in close proximity to services, facilities and jobs. This will be a key factor in informing the Council's preferred approach for the Site Allocations DPD. The six other sites as demonstrated in the Officer's Response to the Regulation 18 consultation also meets the Policy CS1 tests to some degree.

The Council has carried out the following separate studies to quantify and forecast vehicular trips and distribution that would be generated by various development options to enable the delivery of the Core Strategy and future development needs:

- Transport Assessment (2010);
- Cumulative assessment of future development impacts on the highway network (2011);
- Green Belt boundary review sensitivity test – Strategic Transport Assessment (2015);
- Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment (2016).

The collective outcomes of these studies have provided a good understanding of the highway impacts for developing the various sites tested for development.

The Green Belt boundary review sensitivity test – addendum report to Strategic Transport Assessment specifically calculates the quantum and distribution of vehicle trips resulting from various development options at land east of Martyrs Lane and other development scenarios, including the original six safeguarded sites and the forecast of the highway impacts of development of these sites. Overall, this assessment concluded that the scale of the forecast highway impacts vary in each of the Green Belt development options tested. There is a direct result of the number of additional trips generated from each scenario varying according to the number of proposed residential dwellings in each of the development scenarios.

The forecast highway impacts of the trips that will either be generated from development at Martyrs Lane or at the six safeguarded sites are likely to exacerbate existing levels of congestion, instead of creating new areas. Both development options are expected to exacerbate congestion at the following same traffic hotspots:

- A245 Woodham Lane/Sheerwater/Parvis Road;
- A320 Chertsey Road/Guildford Road; and
- B382 Old Woking Road.

In addition, it is also likely that the additional trips generated from development at Martyrs Lane would cause trips to re-route and thus generate additional pressure on areas such as Maybury, Pyrford and Sheerwater. It might also be likely that there would be some re-routing to local roads for developing the six sites.

The studies also confirm that the development of any of the options considered for safeguarding will require necessary and appropriate measures of mitigation to address forecast traffic and ensure the sustainable development of the sites.

The studies recommend that both hard and soft measures of mitigation should be explored to deal with the forecast highway impacts. In addition, each of the allocated sites will be required to undertake detailed transport assessment to determine any site specific mitigation measures that would be necessary to bring forward the development.

The Council is working in partnership with the County Council to explore and determine feasible and deliverable strategic highway measures of mitigation to minimise any development impacts. This work is on-going and will be completed before the DPD is submitted for Examination. Highways England has been consulted to seek their views on the implications of safeguarding the land east of Martyrs Lane on the trunk road network and in particular, connection to the M25. Their response will be addressed separately and taken into account.

Public transport services and infrastructure currently serving the vicinity of the Martyrs Lane and the other six sites are relatively limited. The land east of Martyrs Lane is indirectly served by public buses. Five buses operate in the general area. The 446 and 593 buses travel along the A320 Chertsey Road/Guildford Road and the 462, 556 and 592 buses travel along the A245 Woodham Lane. The 446 is a relatively reasonable hourly service and connects to Woking Town centre. The 592 only runs 3 days per week and three times on those days. The 593 operates 3 services per week whilst the 462 and 556 operate Monday to Friday once per day. The buses do not provide usable routes to access services and facilities at West Byfleet. Whilst this might be better than services serving some of the other six sites, it would be reasonable to say that current services are relatively limited. As recommended by the Transport Assessments, it would be necessary for the Council to work with providers to improve service provision and frequency whether the six sites or Martyrs Lane is developed.

The County Council has carried out for the Council an assessment of how accessible rail stations are by public transport from the various sites being considered for safeguarding. By this measure alone, it appears that the Martyrs Lane site, in particular its northern part will be relatively the least sustainable option when compared with the other six sites. Details of the modelling are background information which can be found on the website.

Whilst the southern part of the Martyrs Lane site is within reasonable cycling distance of West Byfleet Station, there are no clear advantages between the northern part of the site and the other proposed safeguarded sites.

Regarding the representation on landscape, the Peter Brett Green Belt Boundary Review recommends that the two sites in Byfleet and on Saunders Lane as well as land to the rear of 79 – 95 Lovelace Drive, Teggs Lane should be allocated for development. It makes this recommendation after acknowledging the references made in the representation. Detailed analysis and reasons for this recommendation are set out in the report.

The decision to safeguard the land in the draft Site Allocations DPD is therefore well evidenced.

The Council has also carried out a sustainability appraisal to provide the necessary evidence to justify the relative sustainability for safeguarding the land east of Upshot Lane and south of Aviary Road. This evidence should be balanced with the evidence received from the representations to the Martyrs Lane consultation to determine the right approach to safeguarding.

Peter Brett's report assesses the land east of Martyrs Lane as parcel 2. Detailed conclusions about the site are set out in paragraph 3.5.11. Overall, the report concludes that the removal of any part of the land would leave an area of development unconnected to the urban area, and is not recommended for removal from the Green Belt.

Development at either the Martyrs Lane site or the other six sites would be directed to land designated as Flood Zone 1 as defined in the Council's Strategic Flood Risk Assessment. The planning process and development management process in this regard would be similar for development at any of the proposed sites.
